ELECTIVE FOCUS

B.E. Electronics and Computer Engineering Program is designed to offer Elective Focus (EF) along with the independent elective courses, soon after students' clear semester IV of the program. A choice of five EF (offered by three industry) is given to the student. If a student chooses to one of the five choices of the EF, he/she shall continue with this group till his study at Thapar Institute of Engineering & Technology. Need to notice here that student has freedom to choose either one of the EF or impendent Elective courses in semesters where elective choice is given. Following is the choice of Electives and EF to the students:

- I. Financial Derivative (Future First Collaboration)
- II. DevOps and Continuous Delivery (Xebia Collaboration)
- III. Full stack Development (Xebia Collaboration)
- IV. Conversational AI (Nvidia Collaboration)
- V. Robotics and Edge AI (NVIDIA Collaboration)

	Financial Derivative	DevOps and Continuous Delivery	Full stack Development	Conversational AI (NVIDIA Collaboration)	Robotics and Edge AI (NVIDIA Collaboration)
Elective-I Credit: 3 Sem: V	Finance, Accounting and Valuation (UCS539)	Source Code Management (UCS537)	UI & UX Specialist (UCS542)	Conversational AI: Accelerated Data Science (UCS551)	Edge AI and Robotics: Accelerated Data Science (UCS547)
Elective-II Credit: 3 Sem: VI	Financial Markets and Portfolio Theory (UCS675)	Build and Release Management (UCS659)	Data Engineering (UCS677)	Conversational AI: Natural Language Processing (UCS664)	Edge AI and Robotics: Data Centre Vision (UCS668)
Elective-III Credit: 3 Sem: VI	Derivatives Pricing, Trading and Strategies (UCS658)	Continuous Integration and Continuous Deployment (UCS660)	Test Automation (UCS662)	Conversational AI: Speech Processing & Synthesis (UCS749)	Edge AI and Robotics: Embedded Vision (UCS671)
Elective-IV Credit: 3 Sem: VII	Quantitative and Statistical Methods for Finance (UMC743)	System Provisioning and Configuration Management (UCS758)	Cloud & DevOps (UCS745)	Conversational AI: Generative AI (UCSXXX)	Edge AI and Robotics: Reinforcement Learning & Conversational AI (UCS760)

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

ELECTIVE-I

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

SEMESTER I

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UPH013: Physics

L	T	P	Cr
3	1	2	4.5

Course Objective: To introduce the student to the basic physical laws of oscillators, acoustics of buildings, ultrasonics, electromagnetic waves, wave optics, lasers, and quantum mechanics and demonstrate their applications in technology. To introduce the student to measurement principles and their application to investigate physical phenomena

Syllabus

Oscillations and Waves: Oscillatory motion and damping, Applications - Electromagnetic damping – eddy current; **Acoustics:** Reverberation time, absorption coefficient, Sabine's and Eyring's formulae (Qualitative idea), Applications - Designing of hall for speech, concert, and opera; **Ultrasonics:** Production and Detection of Ultrasonic waves, Applications - green energy, sound signaling, dispersion of fog, remote sensing, Car's airbag sensor.

Electromagnetic Waves: Scalar and vector fields; Gradient, divergence, and curl; Stokes' and Green's theorems; Concept of Displacement current; Maxwell's equations; Electromagnetic wave equations in free space and conducting media, Application - skin depth.

Optics: Interference: Parallel and wedge-shaped thin films, Newton rings, Applications as Non-reflecting coatings, Measurement of wavelength and refractive index. **Diffraction:** Single and Double slit diffraction, and Diffraction grating, Applications - Dispersive and Resolving Powers. **Polarization:** Production, detection, Applications – Anti-glare automobile headlights, Adjustable tint windows. **Lasers:** Basic concepts, Laser properties, Ruby, HeNe, and Semiconductor lasers, Applications – Optical communication and Optical alignment.

Quantum Mechanics: Wave function, Steady State Schrodinger wave equation, Expectation value, Infinite potential well, Tunneling effect (Qualitative idea), Application - Quantum computing.

Laboratory Work

1. Determination of damping effect on oscillatory motion due to various media.
2. Determination of velocity of ultrasonic waves in liquids by stationary wave method.
3. Determination of wavelength of sodium light using Newton's rings method.
4. Determination of dispersive power of sodium-D lines using diffraction grating.
5. Determination of specific rotation of cane sugar solution.
6. Study and proof of Malus' law in polarization.
7. Determination of beam divergence and beam intensity of a given laser.
8. Determination of displacement and conducting currents through a dielectric.
9. Determination of Planck's constant.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Micro Project:

Students will be given physics-based projects/assignments using computer simulations, etc.

Course Learning Objectives (CLO)

The students will be able to:

1. Understand damped and simple harmonic motion, the role of reverberation in designing a hall and generation and detection of ultrasonic waves.
2. Use Maxwell's equations to describe propagation of EM waves in a medium.
3. Demonstrate interference, diffraction and polarization of light.
4. Explain the working principle of Lasers.
5. Use the concept of wave function to find probability of a particle confined in a box.
6. Perform an experiment, collect data, tabulate and report them and interpret the results with error analysis.

Text Books

1. Beiser, A., Concept of Modern Physics, Tata McGraw Hill (2007) 6th ed.
2. Griffiths, D.J., Introduction to Electrodynamics, Prentice Hall of India (1999) 3rd ed.
3. Jenkins, F.A. and White, H.E., Fundamentals of Optics, McGraw Hill (2001) 4th ed.

Reference Books

1. Wehr, M.R, Richards, J.A., Adair, T.W., Physics of The Atom, Narosa Publishing House (1990) 4th ed.
2. Verma, N.K., Physics for Engineers, Prentice Hall of India (2014) 1st ed.
3. Pedrotti, Frank L., Pedrotti, Leno S., and Pedrotti, Leno M., Introduction to Optics, Pearson Prentice HallTM (2008) 3rd ed.

UES101: Engineering Drawing

L	T	P	Cr
2	4	0	4.0

Course Objective: This module is dedicated to graphics and includes two sections: 2D drafting and 3D modelling of solid objects. This course is aimed at making the student understand the concepts of projection systems, learn how to create projections of solid objects using first and third angle orthographic projection as well as isometric and auxiliary projection, concept of sectioning, to interpret the meaning and intent of toleranced dimensions and to create/edit drawings using drafting software. In addition, this course shall give an insight on the basic 3D modelling concepts like extrude, revolve, sweep, construction of complex solids.

Syllabus

Engineering Drawing Concepts

1. Introduction to Engineering Drawing
2. Projection systems: First angle and third angle projection system
3. Orthographic Projection: Points, Lines, Solid objects
4. Isometric Projections
5. Auxiliary Projections
6. Development of surfaces
7. Section of solids
8. Limits, fits and tolerances

2D Drafting

1. Management of screen menus commands
2. Creating basic drawing entities
3. Co-ordinate systems: Cartesian, polar and relative coordinates
4. Drawing limits, units of measurement and scale
5. Layering: organizing and maintaining the integrity of drawings
6. Design of prototype drawings as templates.
7. Editing/modifying drawing entities: selection of objects, object snap modes, editing commands,
8. Dimensioning: use of annotations, dimension types, properties and placement, adding text to drawing

3D Modelling

1. Management of screen menus commands
2. Introduction to basic 3D modelling commands such as extrude, revolve, sweep etc.
3. Creation of 2D drawings from a 3D model

Micro Projects /Assignments:

1. Completing the views - Identification and drawing of missing lines and views in the projection of objects
2. Projects related to orthographic and isometric projections Using wax blocks/soap

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

bars/any soft material to develop three dimensional object from given orthographic projections

3. a. 3D modelling of complex machine components
b. Development of production drawings of individual components from the model

Course Learning Objectives (CLO)

The students will be able to:

1. Creatively comprehend the geometrical details of common engineering objects
2. Draw dimensioned orthographic and isometric projections of simple engineering objects
3. Interpret the meaning and intent of limits, fits and tolerances in the drawing
4. Create/edit the engineering drawings for simple engineering objects using 2D drafting software
5. Create/edit 3D models of engineering components using 3D modelling software

Text Books

UHU003: Professional Communication

L	T	P	Cr
2	0	2	3.0

Course Objective: The course is designed to develop the interpersonal, written, and oral as well as the non-verbal communication skills of the students. The course begins by building up on the theoretical concepts and then practicing on the applicability of the various elements. Since the course has very high applicability content, the students are advised to practice in class as well as off class. A very high level of interaction is expected of the students in the class.

Syllabus

Fundamentals of Communication: Meaning, Types and Characteristics of communication, Applicability of Transactional Analysis and Johari Window for enhancing interpersonal communication skills. Seven Cs of Effective Communication, Barriers to Effective Communication.

Effective Oral Communication: Understanding Principles of Oral communication, Formal and Informal Oral Communication, Oral Communication and Behavioral Patterns, Advantages and Disadvantages of Oral Communication.

Effective Listening: Listening vs Hearing, Active Listening techniques, Barriers to Listening.

Effective non-verbal communication: Meaning and Importance of Non-Verbal Communication, Different Types of Non-verbal Communication, Interpretation of Non-verbal Cues.

Effective written Communication: Characteristics of Good Writing, Choice of Words, Sentence Construction, Paragraph development, Forms of writing.

Business Communication: Technical Report Writing, Designing Resumes and Cover Letters for effective job application, E-mail writing and e-mail etiquette.

Organizational Communication: Directional communication: Downward, Upward and Horizontal Communication, Grapevine.

Reading: The following texts (one from each of the two categories listed below) are required to be read by the students in the semester:

Category 1: Animal Farm by George Orwell, Lord of the Flies by William Golding, Life of Pi by Yann Martel

Category 2: The Namesake by Jhumpa Lahiri, The God of Small Things by Arundhati Roy, Q&A by Vikas Swarup

Laboratory Work

1. Needs-assessment of spoken and written communication with feedback.
2. Training for Group Discussions through simulations and role plays.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

3. Technical report writing on survey-based projects.
4. Project-based team presentations.

Course Learning Objectives (CLO)

The students will be able to:

1. Apply communication concepts for effective interpersonal communication.
2. Speak assertively and effectively.
3. Interpret non-verbal cues in professional communication.
4. Write objectively, purposefully and effectively.
5. Design effective resumes and reports.

Text Books

1. Mukherjee H.S..Business Communication: Connecting at Work. Oxford University Press.(2013)
2. Lesikar R.V, and Flately M.E., Basic Business Communication Skills for empowering the internet generation.(2006)
3. Raman, M.,and Singh ,P, Business Communication . Oxford . University Press (2008).

3. Robbins, S.P., & Hunsaker, P.L., Training in Interpersonal Skills, Prentice Hall of India, New Delhi, (2008).
4. Orwell, G., Animal Farm, Fingerprint Publishing, New Delhi, (2017).
5. Golding, W, Lord of the Flies, Faber & Faber; Export edition (1999)
6. Martel,Y., Life of Pi, RHC, New Delhi, (2012).
7. Lahiri,J., The Namesake, Harpercollins (2007)
8. Arundhati Roy,A., The God of Small Things, Penguin India, (2002).
9. Swarup,V., Q&A, Black Swan,(2009).

UES102: Manufacturing Processes

L	T	P	Cr
2	0	2	3.0

Course Objective: This course introduces the basic concepts of manufacturing via machining, forming, casting and joining, enabling the students to develop a basic knowledge of the mechanics, operation and limitations of basic machining tools along with metrology and measurement of parts. The course also introduces the concept of smart manufacturing.

Syllabus

Machining Processes: Principles of metal cutting, Cutting tools, Cutting tool materials and applications, Geometry of single point cutting tool, Introduction to computerized numerical control (CNC) machines, G and M code programming for simple turning and milling operations, introduction of canned cycles.

Metal Casting: Introduction & Principles of sand casting, Requisites of a sound casting, Permanent mold casting processes, casting defects

Metal Forming: Hot & cold metal working, Forging, Rolling, Sheet Metal operations.

Joining Processes: Method of joining, type of electric arc welding processes, Methods of shielding, Power source characteristics, Resistance welding, Soldering, Brazing.

Smart Manufacturing: IoT and ML in manufacturing, Introduction to Additive Manufacturing, Robotics and Automation in manufacturing.

Laboratory Work

Relevant shop floor exercises involving practices in Sand casting, Machining, Welding, Sheet metal fabrication techniques, CNC turning and milling exercises, Experiments on basic engineering metrology and measurements to include measurements for circularity, ovality, linear dimensions, profiles, radius, angular measurements, measurement of threads, surface roughness.

Basic knowledge and derivations related to above measurements, uncertainties, statistical approaches to estimate uncertainties, Line fitting, static and dynamic characteristics of instruments will be discussed in laboratory classes.

Assignments: Assignments for this course will include the topics: Manufacturing of micro-chips used in IT and electronics industry and use of touch screens. Another assignment will be given to practice numerical exercises on topics listed in the syllabus. Case study related to smart manufacturing.

Micro Project: Fabrication of multi-operational jobs using the above processes as per requirement by teams consisting of 4 -6 members. Quality check should be using the equipment available in metrology lab.

Course Learning Objectives (CLO)

The students will be able to:

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

1. Identify & analyse various machining processes/operations for manufacturing of industrial components
2. Apply the basic principle of bulk and sheet metal forming operations
3. Apply the knowledge of metal casting for different requirements.
4. Identify and analyse the requirements to for achieving a sound welded joint apply the concept of smart manufacturing

UMA010: Mathematics-I

L	T	P	Cr
3	1	0	3.5

Course Objective: To provide students with skills and knowledge in sequence and series, advanced calculus, calculus of several variables and complex analysis which would enable them to devise solutions for given situations they may encounter in their engineering profession.

Syllabus

Sequences and Series: Introduction to sequences and infinite series, Tests for convergence/divergence, Limit comparison test, Ratio test, Root test, Cauchy integral test, Alternating series, Absolute convergence, and conditional convergence.

Series Expansions: Power series, Taylor series, Convergence of Taylor series, Error estimates, Term by term differentiation and integration.

Partial Differentiation: Functions of several variables, Limits and continuity, Chain rule, Change of variables, Partial differentiation of implicit functions, Directional derivatives and its properties, Maxima and minima by using second order derivatives.

Multiple Integrals: Double integral (Cartesian), Change of order of integration in double integral, Polar coordinates, Graphing of polar curves, Change of variables (Cartesian to polar), Applications of double integrals to areas and volumes, Evaluation of triple integral (Cartesian).

Complex analysis: Introduction to complex numbers, Geometrical interpretation, Functions of complex variables, Examples of elementary functions like exponential, trigonometric and hyperbolic functions, Elementary calculus on the complex plane (limits, continuity, differentiability), Cauchy – Riemann equations, Analytic functions, Harmonic functions.

Course Learning Objectives (CLO)

The students will be able to:

1. Determine the convergence/divergence of infinite series, approximation of functions using power and Taylor's series expansion and error estimation.
2. Examine functions of several variables, define and compute partial derivatives, directional derivatives, and their use in finding maxima and minima in some engineering problems.
3. Evaluate multiple integrals in Cartesian and Polar coordinates, and their applications to engineering problems.
4. Represent complex numbers in Cartesian and Polar forms and test the analyticity of complex functions by using Cauchy – Riemann equations.

Text Books

1. Thomas, G.B. and Finney, R.L., Calculus and Analytic Geometry, Pearson Education (2007), 9th ed.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

2. Stewart James, Essential Calculus; Thomson Publishers (2007), 6th ed.
3. Kasana, H.S., Complex Variables: Theory and Applications, Prentice Hall India, 2005 (2nd edition).

SEMESTER II

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UCB009: Chemistry

L	T	P	Cr
3	0	2	4.0

Course Objective: The course aims at elucidating principles of applied chemistry in industrial systems, water treatment, engineering materials, computational and analytical techniques.

Syllabus

Atomic and Molecular spectroscopy: Introduction to spectroscopy, principles of atomic absorption, flame emission spectrophotometry and ICP-AES (Inductively Coupled Plasma- Atomic Emission Spectroscopy), Quantification by calibration method, Jablonski diagram, fluorescence and phosphorescence, Beer-Lambert's Law, principle and applications of UV-Vis and IR spectroscopy.

Electrochemistry: Background of electrochemistry, Ionic mobility, Conductometric titrations, Modern Batteries: Pb-acid and Li ion battery, Corrosion and its protection.

Water Treatment and Analysis: Physiochemical parameters of water quality, External and internal methods of Softening of water: carbonate, phosphate, calgon and colloidal conditioning, Zeolite process, Ion exchange process, treatment of water for domestic use, Desalination of brackish water: Reverse osmosis & Electrodialysis.

Fuels: Classification of fuels, Calorific value, Cetane and Octane number, alternative fuels: biodiesel, Power alcohol, synthetic petrol, Fuel cells: H₂ production and storage, Water splitting, Rocket propellant.

Chemistry of Polymers: Classification of polymers, tacticity of polymers, molecular weight calculations, Polymers in daily life, conducting, inorganic and biodegradable polymers.

Computers in Chemistry: Introduction to SMILES (Simplified Molecular Input Line-Entry System): Methodology and encoding rules, SMILES notation-chemical structure interconversions and its applications.

Laboratory Work

Electrochemical measurements: Experiments involving use of pH meter, conductivity meter, potentiometer, Spectroscopic technique, Volumetric titrations: Determination of mixture of bases, hardness, alkalinity, chloride and iron content, Application of polymers and SMILES Language

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Course Learning Objectives (CLO)

The students will be able to:

1. recognize principles and applications of atomic and molecular spectroscopy.
2. explain the concepts of conductometric titrations, modern batteries and corrosion.
3. apply and execute water quality parameter and treatment methods.
4. discuss the concept of alternative fuels, application of polymers and SMILES.
5. execute laboratory techniques like pH metry, potentiometry, spectrophotometry, conductometry and volumetry.

Text Books

UES103: Programming for Problem Solving

L	T	P	Cr
3	0	2	4.0

Course Objectives: This course is designed to solve and explore the problems using the art of computer programming with the help of C Language. Students will be able to apply these problem solving concepts in real life applications.

Syllabus

Introduction to Computer Fundamentals- Computer Memory Hierarchy, Types of Software Binary number system, Algorithm, Flowchart, Formulate simple algorithms for logical and arithmetic problems.

Basics of C Programming: Structure and Life cycle of a C Program, Data types, Identifiers, Variables, Keywords, Constants, input/output statements, Operators, Type conversion and type casting. Translate the algorithms to code snippets.

Decision Making and Iterative Statements- Decision making- if, if-else, Nested if-else, Multiple if, else if, switch, Ternary Operator, **Loops-** (while, do-while, for), Nesting of Loops, break, continue and goto. Implement the switch () to solve the basic functions of scientific calculator.

Functions: Function prototype, Definition and Call, Type of Functions, Scope of variables in (Block, Function, Program, File), Storage classes (Auto, Register, Static and Extern), Recursion (with the introduction of Stack), Implementation of recursion to solve the problem of Tower of Hanoi.

Arrays and Strings- One-dimensional array its operations (Traversal, Linear Search, Insertion, Deletion, Bubble Sort), Two-dimensional and its operations (Addition, Transpose and Multiplication), Passing of array into a function (row and entire array), Input and output of a string, string inbuilt functions, 2-D Character array.

Pointers: Introduction to Pointers, Pointer arithmetic, Passing arguments to a function using pointer (understanding of call by value and call by reference), Accessing arrays using pointers Dynamic memory allocation (malloc(), calloc(), realloc() and free()), Pointer and Functions.

Structures and Union: Structure declaration, Initialization of structures, Structure variables, Accessing structure elements using (.) operator, Array of structure variables, Passing structure variable to a function (individual and entire structure), Structure pointer, Comparison of Structure and Union.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

File Handling: Introduction of Files (streams in C), using File (Declaring, Opening and Closing), Operations on File (Reading, Writing and appending), and Random Access of a file, command line argument.

Laboratory Work

To implement programs for various kinds of real life applications in C Language.

Course Learning Outcomes (CLOs) /Course Objectives (COs):

On completion of this course, the students will be able to:

1. Comprehend and analyze the concepts of number system, memory, compilation and debugging of the programs in C language.
2. Analyze the control & iterative statements to solve the problems with C language source codes.
3. Design and create programs for problem solving involving arrays, strings and pointers.
4. Evaluate and analyze the programming concepts based on user define data types and file handling using C language.

Text Books

1. C Programming Language, Brian W. Kernighan Dennis M. Ritchie, 2nd ed, 2012.
2. Programming in ANSI C, Balagurusamy G., 8th ed., 2019

Reference Books

1. Let Us C, Kanetkar Y., 16th ed., 2017
2. Programming with C, Byron S Gottfried, McGraw Hill Education, Forth edition, 2018

UES013: Electrical and Electronics Engineering

L	T	P	Cr
3	1	2	4.5

Course Objective: To introduce the basic concepts of electrical and electronics engineering.

Syllabus

DC Circuits: Introduction to circuit elements; rms and average values for different wave shapes, independent and dependent current and voltage sources; Kirchhoff's laws; mesh and node analysis; source transformations; network theorems: Superposition theorem, Thevenin's and Norton's theorem, Maximum power transfer theorem; star-delta transformation; steady state and transient response of R-L and R-C and R-L-C circuits.

AC Circuits: Concept of phasor, phasor representation of circuit elements; analysis of series and parallel AC circuits; concept of real, reactive and apparent powers; resonance in RLC series and parallel circuits; balanced three phase circuits: voltage, current and power relations for star and delta arrangement; analysis of balanced and unbalanced circuits; three phase power measurement using two-wattmeter and one-wattmeter methods.

Magnetic circuits: analogy between electric and magnetic circuits; series and parallel magnetic circuits; operating principles of electrical appliances: single-phase transformer and rotating machines; tests and performance of single-phase transformer.

Digital Logic Design: Digital signals, Number systems, Positive and negative representation of numbers, Signed-number representation, Binary arithmetic, Postulates and theorems of Boolean Algebra, Algebraic simplification, Sum of products and product of sums formulations (SOP and POS), Gate primitives, Logic Gates and Universal Gates, Minimization of logic functions, Karnaugh Maps, Logic implementation using Gates, Decoder, MUX, Flip-Flops, Asynchronous up/down counters.

Electronic Devices: p- n junction diode: V-I characteristics of diode, Operation of Bipolar Junction Transistor, CB and CE configuration, Transistor as a switch, Operation of SCR, DIAC and TRIAC.

Operational Amplifier Circuits: The ideal operational amplifier, the inverting, non-inverting amplifiers, Op-Amp Characteristics, Applications of Op-amp: summing amplifier, differentiator and integrator.

Laboratory Work: Kirchhoff's laws, network theorems, ac series and parallel circuit, three phase power measurement, magnetic circuit, tests on transformer, resonance in AC circuit, combinational circuits, flip flops, shift register and binary counters, asynchronous and synchronous up/down counters, BJT characteristics.

Course Learning Objectives (CLO)

The students will be able to:

1. apply various networks laws and theorems to solve dc circuits
2. compute different ac quantities with phasor representation

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

3. comprehend the operation in magnetic circuits, single phase transformer and rotating machines
4. recognize and apply the number systems and Boolean algebra.
5. reduce and simplify Boolean expressions and implement them with logic gates.
6. discuss and explain the working of diode, transistor and operational amplifier, their configurations and applications.

Text Books

UEN008: Energy and Environment

L	T	P	Cr
2	0	0	2.0

Course Objective: The exposure to this course would facilitate the students in understanding the terms, definitions and scope of environmental and energy issues pertaining to current global scenario; understanding the need of sustainability in addressing the current environmental & energy challenges.

Syllabus

Introduction: Concept of sustainability and sustainable use of natural resources, Climate Change & its related aspects.

Air Pollution: Origin, Sources and effects of air pollution; Primary and secondary meteorological parameters; wind roses; Atmospheric stability; Source reduction and Air Pollution Control Devices for particulates and gaseous pollutants in stationary sources.

Water Pollution: Origin, Sources of water pollution, Category of water pollutants, Physicochemical characteristics, Components of wastewater treatment systems.

Solid waste management: Introduction to solid waste management, Sources, characteristics of municipal solid waste, Solid waste management methods: Incineration, composting, landfilling.

Energy Resources: Classification of Energy Resources; Non-conventional energy resources- Biomass energy, Thermo-chemical conversion and biochemical conversion route; Solar energy-active and passive solar energy absorption systems; Type of collectors; Thermal and photo conversion applications.

Course Learning Objectives (CLO)

The students will be able to:

1. Comprehend the interdisciplinary context of environmental issues with reference to sustainability
2. Assess the impact of anthropogenic activities on the various elements of environment and apply suitable techniques to mitigate their impact.
3. Demonstrate the application of technology in real time assessment and control of pollutants.
4. Correlate environmental concerns with the conventional energy sources associated and assess the uses and limitations of non-conventional energy technologies

Text Books

UMA004: Mathematics - II

L	T	P	Cr
3	1	0	3.5

Course Objective: To introduce students the theory and concepts of differential equations, linear algebra, Laplace transformations and Fourier series which will equip them with adequate knowledge of mathematics to formulate and solve problems analytically.

Syllabus

Ordinary Differential Equations: Review of first order differential equations, Exact differential equations, Second and higher order differential equations, Solution techniques using one known solution, Cauchy - Euler equation, Method of undetermined coefficients, Variation of parameters method, Engineering applications of differential equations.

Laplace Transform: Definition and existence of Laplace transforms and its inverse, Properties of the Laplace transforms, Unit step function, Impulse function, Applications to solve initial and boundary value problems.

Fourier Series: Introduction, Fourier series on arbitrary intervals, Half range expansions, Applications of Fourier series to solve wave equation and heat equation.

Linear Algebra: Row reduced echelon form, Solution of system of linear equations, Matrix inversion, Linear spaces, Subspaces, Basis and dimension, Linear transformation and its matrix representation, Eigen-values, Eigen-vectors and Diagonalisation, Inner product spaces and Gram-Schmidt orthogonalisation process.

Course Learning Objectives (CLO)

The students will be able to:

1. Solve the differential equations of first and 2nd order and basic application problems described by these equations.
2. Find the Laplace transformations and inverse Laplace transformations for various functions. Using the concept of Laplace transform students will be able to solve the initial value and boundary value problems.
3. Find the Fourier series expansions of periodic functions and subsequently will be able to solve heat and wave equations.
4. Solve systems of linear equations by using elementary row operations.
5. Identify the vector spaces/subspaces and to compute their bases/orthonormal bases. Further, students will be able to express linear transformation in terms of matrix and find the eigenvalues and eigenvectors.

Text Books

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

2. Jain, R.K. and Iyenger, S.R.K., Advanced Engineering Mathematics, Narosa Publishing House (2011), 4th edition.

SEMESTER III

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UMA035-OPTIMIZATION TECHNIQUES (all branches except for Mechanical)

L	T	P	Cr
3	0	2	4.0

Course Objective: The main objective of the course is to formulate mathematical models and to understand solution methods for real life optimal decision problems. The emphasis will be on basic study of linear and non-linear programming problems, Integer programming problem, Transportation problem, Two person zero sum games with economic applications and project management techniques using CPM.

Scope of Operations Research: Introduction to linear and non-linear programming formulation of different models.

Linear Programming: Geometry of linear programming, Graphical method, Linear programming (LP) in standard form, Solution of LP by simplex method, Exceptional cases in LP, Duality theory, Dual simplex method, Sensitivity analysis.

Integer Programming: Branch and bound technique, Gomory's Cutting plane method.

Network Models: Construction of networks, Network computations, Free Floats, Critical path method (CPM), optimal scheduling (crashing). Initial basic feasible solutions of balanced and unbalanced transportation problems, optimal solutions, assignment problem.

Multiobjective Programming: Introduction to multiobjective linear programming, efficient solution, efficient frontier.

Nonlinear Programming:

Unconstrained Optimization: unimodal functions, Fibonacci search method, Steepest Descent method, Conjugate Gradient method

Constrained Optimization: Concept of convexity and concavity, Maxima and minima of functions of n-variables, Lagrange multipliers, Karush-Kuhn-Tucker conditions for constrained optimization

Course learning outcome: Upon Completion of this course, the students would be able to:

- 1) formulate the linear and nonlinear programming problems.
- 2) solve linear programming problems using Simplex method and its variants.
- 3) construct and optimize various network models.
- 4) solve multiobjective linear programming problems.
- 5) solve nonlinear programming problems.

Text Books:

- 1) Chandra, S., Jayadeva, Mehra, A., Numerical Optimization and Applications, Narosa Publishing House, (2013).
- 2) Taha H.A., Operations Research-An Introduction, PHI (2007).

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Recommended Books:

- 2) BazaarraMokhtar S., Jarvis John J. and ShiraliHanif D., Linear Programming and Network flows, John Wiley and Sons (1990)
- 3) Swarup, K., Gupta, P. K., Mammohan, Operations Research, Sultan Chand & Sons, (2010).
- 4) H.S. Kasana and K.D. Kumar, Introductory Operations research, Springer publication, (2004)
- 5) Ravindran, D. T. Phillips and James J. Solberg: Operations Research- Principles and Practice, John Wiley & Sons, Second edn. (2005).

UNC303: COMPUTER AND COMMUNICATION NETWORKS

L	T	P	Cr
3	0	0	3.0

Course Objective: To introduce basic concepts of Data communication with different models. Enumerate the physical layer, Data Link Layer, Network Layer, Transport Layer and Application Layer, explanation of the function(s) of each layer. Familiarization with cryptography and network security.

Syllabus

Overview of Data Communication and Networking: Data communications, Networks, The Internet, Protocols and standards, Layered tasks, OSI model, TCP /IP protocol Architecture and its addressing, Data Rate Limits, Circuit switching, Packet Switching, Message Switching.

Data link layer:

Types of errors, Detection, Error correction, Flow and error control, Stop and wait ARQ, go back n ARQ, Selective repeat ARQ, HDLC, Point to point protocol, PPP stack, ALOHA, CSMA, CSMA/CD, CSMA/CA, Reservation, Polling, Token Passing, FDMA, TDMA, CDMA. IEEE Standards: 802.3 to 802.6 and 802.11, FDDI, Bluetooth, SONET/SDH.

Network layer: Internetworks, Logical Addressing, Subnetting, Routing, ARP, IP, ICMP, IGMP, IPV6, Unicast routing, Unicast routing protocol, Multicast routing, Multicast routing protocols.

Transport layer: Process to process delivery, User datagram protocol (UDP), Transmission control protocol (TCP), Data traffic, Congestion, Congestion control, Quality of service, Techniques to improve QOS, Integrated services, Differentiated services.

Application layer: Client server model, Socket interface, Name space, Domain name space, Distribution of name space, DNS in the internet, Resolution, DNS messages, DDNS, Encapsulation, Electronic mail, File transfer, HTTP, World wide web (WWW), Network Management System, Cryptography, Network Security, Simple Network Management Protocol (SNMP), Simple Mail Transfer protocol (SMTP)

Course Learning Objectives (CLO)

The students will be able to:

1. Understand the layered architecture of Internet's reference models: OSI & TCP/IP and basis of physical layer and media.
2. Analyze the design issues, framing, error detection and correction, channel allocation techniques and link layer protocols.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

3. Evaluate the network layer, internetworking, IP and IP addressing mechanism.
4. Apply various routing algorithms, elements of transport protocols, congestion control, and QOS in networks.
5. Understand various communication applications like email, web browser, familiarization with cryptography and network security.

Text Books

1. Ferouzan, Behrouz A., Data Communications and Networking, TATA McGraw Hill 5th Edition, (2017)
2. Tanenbaum, Andrew S., Computer Networks, PHI 5th Edition, (2013).

UES012: ENGINEERING MATERIALS

L T P Cr

3 1 2 4.5

Course Objective: To provide basic understanding of engineering materials, their structure and the influence of structure on mechanical, chemical, electrical and magnetic properties.

Syllabus

Structure of solids: Classification of engineering materials, Structure-property relationship in engineering materials, Crystalline and non-crystalline materials, Miller Indices, Crystal planes and directions, Determination of crystal structure using X-rays, Inorganic solids, Silicate structures and their applications. Defects; Point, line and surface defects.

Mechanical properties of materials: Elastic, Anelastic and Viscoelastic behaviour, Engineering stress and engineering strain relationship, True stress - true strain relationship, review of mechanical properties, Plastic deformation by twinning and slip, Movement of dislocations, Critical shear stress, Strengthening mechanism, and Creep.

Equilibrium diagram: Solids solutions and alloys, Gibbs phase rule, Unary and binary eutectic phase diagram, Examples and applications of phase diagrams like Iron - Iron carbide phase diagram.

Electrical and magnetic materials: Conducting and resistor materials, and their engineering application; Semiconducting materials, their properties and applications; Magnetic materials, Soft and hard magnetic materials and applications; Superconductors; Dielectric materials, their properties and applications. Smart materials: Sensors and actuators, piezoelectric, magnetostrictive and electrostrictive materials.

Corrosion process: Corrosion, Cause of corrosion, Types of corrosion, Protection against corrosion.

Materials selection: Overview of properties of engineering materials, Selection of materials for different engineering applications.

Laboratory Work and Micro-Project:

Note: The micro-project will be assigned to the group(s) of students at the beginning of the semester. Based on the topic of the project the student will perform any of the six experiments from the following list:

To determine Curie temperature of a ferrite sample and to study temperature dependence of permeability in the vicinity of Curie temperature.

1. To study cooling curve of a binary alloy.
2. Determination of the elastic modulus and ultimate strength of a given fiber strand.
3. To determine the dielectric constant of a PCB laminate.
4. Detection of flaws using ultrasonic flaw detector (UFD).
5. To determine fiber and void fraction of a glass fiber reinforced composite specimen.
6. To investigate creep of a given wire at room temperature.
7. To estimate the Hall coefficient, carrier concentration and mobility in a

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

- semiconductor crystal.
8. To estimate the band-gap energy of a semiconductor using four probe technique.
 9. To measure grain size and study the effect of grain size on hardness of the given metallic specimens.

Course Learning Objectives (CLO)

The students will be able to:

1. classify engineering materials based on its structure.
2. draw crystallographic planes and directions.
3. distinguish between elastic and plastic behavior of materials.
4. distinguish between isomorphous and eutectic phase diagrams.
5. classify materials based on their electrical and magnetic properties.
6. propose a solution to prevent corrosion.

UNC302: OBJECT ORIENTED PROGRAMMING PRACTICES

L	T	P	Cr
2	0	2	3.0

Course Objective: To gain understanding of object-oriented programming (OOP) principles, explore their practical uses, and acquire knowledge of diverse algorithmic methods and approaches.

Syllabus

Basics of Object Oriented Programming (OOP): Introduction to OOP, Difference between OOP and procedure oriented Programming, Classes, objects and Methods, Function overloading.

Data Abstraction: Class definition, controlling access to other functions, Different types of constructors, Destructor, Objects and classes. **Polymorphism:** Overloading functions and operators, Runtime polymorphism, overloading new and delete operators.

Inheritance: Derived classes, syntax of derived classes, Access to the base class, multiple inheritance, Virtual base class, Virtual functions and Polymorphism, Implications of polymorphic use of classes, virtual destructors.

Input/Output and File handling: Stream I/O in C++, manipulators, Formatted I/O, Overloading << and >> operators, Templates and Exception Handling: Use of templates, function templates, class templates.

Laboratory Work:

To implement Programs for various kinds of programming constructs in C++ Language.

Course Learning Objectives (CLO)

The students will be able to:

1. Explain OOP principles, compare with procedural programming, and explore classes, objects, and methods.
2. Implement data abstraction using classes and constructors, and achieve polymorphism through function and operator overloading.
3. Apply inheritance and polymorphism concepts to enhance code reusability.
4. Analyze I/O file stream, templates and exception handling for robust programming.

UNC304: DISCRETE MATHEMATICS

L	T	P	Cr
2	0	0	2.0

Course Objectives: To understand mathematical reasoning in order to read, comprehend and construct Mathematical arguments as well as to solve problems, occurred in the development of programming languages. To work with discrete structures such as graphs to study the structure of the world wide web, to model a computer network and to find the shortest path between two places in a transportation network.

Basic Logic: Propositional logic, Logical connectives, Truth tables, Disjunctive normal form, Validity of a well-formed formula, Propositional inference rules (e.g., modus ponens, modus tollens), Universal and existential quantifiers and their negations.

Sets, Relations and Functions: Methods for describing a set, e.g., listing elements, set builder notation, Venn diagrams, Union, intersection, set difference, complement, Cartesian product, Power sets, Cardinality of finite sets, Reflexivity, symmetry, antisymmetry, transitivity, equivalence relations, partial orders, Poset, Lattice, Hasse's Diagram, Domain, target, and range/image of a function, Surjections, injections, bijections, Inverses, Composition.

Proof Techniques: Notions of implication, double implication, equivalence, converse, inverse, contrapositive, negation, and contradiction, The structure of mathematical proofs
Direct proofs, Disproving by counterexample, Proof by contrapositive, Proof by contradiction, Induction over natural numbers, Weak and strong induction (i.e., First and Second Principle of Induction), Recursive mathematical definitions, Well orderings.

Basics of Counting: Counting arguments, Set cardinality and counting, Sum and product rules, Inclusion-exclusion principle, Arithmetic and geometric progressions, The pigeonhole principle, Permutations and combinations, Basic definitions, The binomial theorem, Recurrence relations.

Graph Theory: Properties, Traversal strategies, Undirected graphs, Directed graphs, Weighted graphs, Spanning trees/forests, Graph isomorphism, Eulerian cycle and Hamiltonian cycle, adjacency and incidence matrices, vertex colouring, planarity, trees.

Course Learning Outcomes:

1. Apply Knowledge of mathematics in truth tables and the rules of propositional and predicate calculus
2. Apply the logical and analytical structure of proofs and work symbolically with connectives and quantifiers to produce logically valid, correct and clear arguments.
3. Evaluate elementary mathematical arguments and identify fallacious reasoning
4. Analyze real-world problems using graph theory.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UEC301: ANALOG ELECTRONIC CIRCUITS

L	T	P	Cr
3	1	2	4.5

Course Objective: The aim of this course is to familiarize the student with the analysis and design of basic transistor amplifier circuits, oscillators and wave shaping circuits.

Syllabus

Introduction: p-n junction and contact potential, Fermi levels, Reverse and Forward bias, Zener and Avalanche breakdown. Capacitance of p-n junction, application of diodes

Transistor Biasing and Thermal Stabilization: Operating Point, Biasing techniques, Stability, Stabilization against Variations in I_{co} , V_{BE} , and β , Bias Compensation, Thermal Stabilization

Transistor at Low and High Frequencies: Low frequency h-parameter model of BJT, The Hybrid- π (II) Common-emitter Transistor Model, Hybrid-II conductances, Hybrid-II Capacitances, CE short-circuit current gain, gain-bandwidth product.

Multistage Amplifiers: Classification of amplifiers, Distortion in amplifiers, Frequency response of an amplifier, Step Response of an amplifier, RC-coupled amplifier, Low-frequency response of an RC-coupled stage, Effect of an emitter Bypass capacitor on low-frequency response.

Power Amplifiers: Class A, B, AB, Push pull & Class C amplifiers, Comparison of their Efficiencies, Types of distortion.

Feedback Amplifiers and oscillators: Feedback concept, General characteristics of negative-feedback amplifiers, Types of feedback amplifiers, Analysis of a Feedback Amplifiers: Input resistance, Output resistance, Sinusoidal Oscillator, RC Phase-shift oscillator, A General form of oscillator circuit, Wien Bridge oscillator

Wave shaping circuits: Multivibrators (Astable, Mono-stable, Bi-Stable), High pass and low pass filters using R-C Circuits & their response to step input, Pulse input, Square input and Ramp Input, Schmitt Trigger.

Familiarization with standards: IEEE 218-1956, IEEE/AIEE 425-1957, IEEE Std 181-2011.

Laboratory Work: Frequency response analysis of RC coupled amplifier, Tuned amplifiers, Push-pull amplifier, Feedback amplifier. Hartley and Colpitts Oscillator. RC Phase shift oscillator. Study of Multi-vibrators (Astable, Mono-stable, Bi-stable Multi-vibrator). Clipper and Clamper circuit, Schmitt Trigger.

Course Learning Objectives (CLO)

The students will be able to:

1. Evaluate operating point and various stability factors of transistor.
2. Analyse low and high frequency transistor model.
3. Analyse the performance of multistage, feedback and power amplifiers.
4. Design oscillator circuits and analyse its performance.
5. Analyse various filters and multi-vibrators circuits.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UTA016: ENGINEERING DESIGN PROJECT-I

L	T	P	Cr
1	0	2	3.0

Course Objective: To develop design skills according to a Conceive-Design-Implement-Operate (CDIO) compliant methodology. To apply engineering sciences through learning-by- doing project work. To provide a framework to encourage creativity and innovation. To develop teamwork and communication skills through group-based activity. To foster self-directed learning and critical evaluation. To provide a basis for the technical aspects of the project a small number of lectures are incorporated into the module. As the students would have received little in the way of formal engineering instruction at this early stage in the degree course, the level of the lectures is to be introductory with an emphasis on the physical aspects of the subject matter as applied to the ‘Mangonel’ project. The lecture series include subject areas such as Materials, Structures, Dynamics and Digital Electronics delivered by experts in the field.

This module is delivered using a combination of introductory lectures and participation by the students in 15 “activities”. The activities are executed to support the syllabus of the course and might take place in specialised laboratories or on the open ground used for firing the Mangonel. Students work in groups throughout the semester to encourage teamwork, cooperation and to avail of the different skills of its members. In the end the students work in sub-groups to do the Mangonel throwing arm redesign project. They assemble and operate a Mangonel, based on the lectures and tutorials assignments of mechanical engineering they experiment with the working, critically analyse the effect of design changes and implement the final project in a competition. Presentation of the group assembly, redesign and individual reflection of the project is assessed in the end.

Syllabus

Breakup of lecture details to be taken up by MED:

Lec No.	Topic	Contents
Lec 1	Introduction	The Mangonel Project. History. Spreadsheet.
Lec 2	PROJECTILE MOTION	no DRAG, Design spread sheet simulator for it.
Lec 3	PROJECTILE MOTION	with DRAG, Design spread sheet simulator for it.
Lec 4	STRUCTURES FAILURE	STATIC LOADS
Lec 5	STRUCTURES FAILURE	DYNAMIC LOADS
Lec 6	REDESIGNING THE MANGONEL	Design constraints and limitations of materials for redesigning the Mangonel for competition as a group.
Lec 7	MANUFACTURING	Manufacturing and assembling the Mangonel.
Lec 8	SIMULATION IN ENGINEERING DESIGN	Simulation as an Analysis Tool in Engineering Design.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Lec 9	ROLE OF MODELLING & PROTOTYPING	The Role of Modelling in Engineering Design.
-------	---------------------------------	--

Breakup of lecture details to be taken up by ECED:

Lec No.	Topic	Contents
Lec 1-5	Digital Electronics	Prototype, Architecture, Using the Integrated Development Environment (IDE) to Prepare an Arduino Sketch, structuring an Arduino Program, Using Simple Primitive Types (Variables), Simple programming examples. Definition of a sensor and actuator.

Laboratory Work

Associated Laboratory/Project Program: T- Mechanical Tutorial, L- Electronics Laboratory, W- Mechanical Workshop of “Mangonel” assembly, redesign, operation and reflection.

Title for the weekly work in 15 weeks	Code
Using a spread sheet to develop a simulator	T1
Dynamics of projectile launched by a Mangonel - No Drag	T2
Dynamics of projectile launched by a Mangonel - With Drag	T3
Design against failure under static actions	T4
Design against failure under dynamic actions	T5
Electronics hardware and Arduino controller	L1
Electronics hardware and Arduino controller	L2
Programming the Arduino Controller	L3
Programming the Arduino Controller	L4
Final project of sensors, electronics hardware and programmed Arduino controller based measurement of angular velocity of the “Mangonel” throwing arm.	L5
Assembly of the Mangonel by group	W1
Assembly of the Mangonel by group	W2
Innovative redesign of the Mangonel and its testing by group	W3
Innovative redesign of the Mangonel and its testing by group	W4
Final inter group competition to assess best redesign and understanding of the “Mangonel”.	W5

Project: The Project will facilitate the design, construction and analysis of a “Mangonel”. In addition to some introductory lectures, the content of the students’ work during the semester will consist of:

1. the assembly of a Mangonel from a Bill Of Materials (BOM), detailed engineering drawings of parts, assembly instructions, and few prefabricated parts ;
2. the development of a software tool to allow the trajectory of a “missile” to be studied as a function of various operating parameters in conditions of no-drag and drag due

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

- to air;
3. a structural analysis of certain key components of the Mangonel for static and dynamic stresses using values of material properties which will be experimentally determined;
 4. the development of a micro-electronic system to allow the angular velocity of the throwing arm to be determined;
 5. testing the Mangonel;
 6. redesigning the throwing arm of the Mangonel to optimise for distance without compromising its structural integrity;
 7. an inter-group competition at the end of the semester with evaluation of the group redesign strategies.

Course Learning Objectives (CLO)

1. simulate trajectories of a mass with and without aerodynamic drag using a spreadsheet based software tool to allow trajectories be optimized;
2. perform a test to acquire an engineering material property of strength in bending and analyze the throwing arm of the “Mangonel” under conditions of static and dynamic loading;
3. develop and test software code to process sensor data;
4. design, construct and test an electronic hardware solution to process sensor data;
5. construct and operate a Roman catapult “Mangonel” using tools, materials and assembly instructions, in a group, for a competition;
6. operate and evaluate the innovative redesign of elements of the “Mangonel” for functional and structural performance

UDT003: APTITUDE SKILLS BUILDING

L	T	P	Cr
2	0	0	2

Course Objective:

- The course aims to equip students with a comprehensive understanding of quantitative, verbal, and logical reasoning concepts, enhancing their ability to solve numerical problems, interpret written information, and evaluate arguments effectively. It provides exposure to various aptitude test formats, and time-management strategies, and offers practice opportunities with personalized feedback to build confidence and prepare students for aptitude tests, increasing their job market competitiveness and career advancement opportunities.
- **Verbal Ability & Reading Comprehension:** Introduction to Reading Comprehension: Strategies for approaching different types of passages, identifying main ideas, and understanding structure, Advanced reading techniques, dealing with inferences, tone, and author's purpose, Introduction to Verbal Ability: Grammar Fundamentals, sentence structure, common errors, Sentence Correction and Completion, Review and Test-Taking Strategies: Consolidate knowledge from all areas, focusing on test-taking strategies, time management, and practice tests.
- **Quantitative & Logical Reasoning:** Introduction to Quantitative Ability - Arithmetic Basics: arithmetic concepts (numbers, operations, percentages, ratios, averages), Advanced Arithmetic & Introduction to Algebra: more complex arithmetic (interest, partnerships, mixtures, ratios, variation) and basics of algebra (equations, inequalities, speed, time and distance), Algebra Continued & Introduction to Modern Math: quadratic equations, sequences and introduce concepts of modern math set theory, probability, permutations, combinations, and more complex probability problems, Introduction to Data Interpretation: Basics of data interpretation, understanding and interpreting bar charts and pie charts, Data Interpretation - Line Charts and Tables, interpreting trends, and comparing data, practice session with mixed problems from quantitative ability and data interpretation, Introduction to Logical Reasoning: Number Series and Sequences, Family Relationships and Directions.

Course Learning Outcome

CLO 1: Ability to identify and provide solutions for complex problems and apply the basics of mathematics

CLO 2: Able to analyze and interpret data from various sources to identify trends and make data-driven comparisons.

CLO 3: Able to evaluate logical reasoning scenarios to identify patterns, solve sequences, and make accurate inferences.

CLO 4: Able to improve communication skills, including correcting errors, refining structure, and enhancing verbal proficiency.

CLO 5: Able to analyze various types of information to identify key points, infer meaning, and understand underlying tones and purposes.

Evaluation Scheme

Sr. No.	Evaluation elements	Weightage (%)
1	EST	50
2	Sessional	40
3	Assignment	10

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

SEMESTER IV

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UNC401: DATA STRUCTURES AND ALGORITHMS

L	T	P	Cr
3	0	2	4.0

Course Objective: to become familiar with different types of data structures and their applications and learn different types of algorithmic techniques and strategies.

Syllabus

Linear data structures: arrays, records, linked lists, strategies for choosing the appropriate data structure, abstract data types and their implementation: stacks, queues, priority queues.

Basic Analysis: Differences among best, expected, and worst case behaviors of an algorithm, Asymptotic analysis, Big O notation: formal definition and use, big omega and big theta notation, Time and space trade-offs in algorithms, Recurrence relations, Analysis of iterative and recursive algorithms.

Searching and Sorting: Linear Search, Binary Search, Bubble Sort, Selection Sort, Insertion Sort, Shell Sort, Quick Sort, Heap Sort, Merge Sort.

Algorithmic Strategies with examples and problem solving: Brute-force algorithms with examples, Greedy algorithms with examples, Divide-and-conquer algorithms with examples, Recursive backtracking, Dynamic Programming with examples, Branch-and-bound with examples, Heuristics, Reduction: transform-and-conquer with examples.

Non-Linear Data Structures and Sorting Algorithms: Hash tables, including strategies for avoiding and resolving collisions, Binary search trees, Common operations on binary search trees such as select min, max, insert, delete, iterate over tree, Graphs and graph algorithms, Representations of graphs, Depth- and breadth-first traversals, Heaps, Shortest-path algorithms (Dijkstra and Floyd), Minimum spanning tree (Prim and Kruskal).

Laboratory Work: Implementation of Arrays, Recursion, Stacks, Queues, Lists, Binary trees, Sorting techniques, Searching techniques. Implementation of all the algorithmic techniques.

Course Learning Objectives (CLO)

1. Implement the basic data structures and solve problems using fundamental algorithms.
2. Implement various searching and sorting techniques.
3. Analyze the complexity of algorithms, to provide justification for that selection, and to implement the algorithm in a particular context.
4. Apply appropriate data structure and algorithmic technique to solve real-world problems.

Text Books

UMA033: NUMERICAL AND STATISTICAL METHODS

L	T	P	Cr
3	0	2	4

Course Objective: The main objective of this course is to understand and implement various numerical and statistical methods to solve engineering, physical and real life problems.

Syllabus

Basic of Errors: Floating-point representation, rounding and chopping errors.

Non-Linear Equations: Bisection, fixed point iteration, Newton – Raphson’s method for simple and multiple roots and order of convergence.

Linear Systems and Eigen-Values: Gauss elimination method using partial pivoting, Gauss--Seidel method, Rayleigh’s power method for eigen-values and eigen-vectors.

Interpolation and Approximations: Newton’s forward and backward differences, Lagrange (with error analysis), Newton’s divided difference interpolation formulas.

Numerical Integration: Newton-Cotes quadrature formulae (Trapezoidal and Simpson's rules) and their error analysis, Gauss-Legendre quadrature formulae.

Differential Equations: Solution of initial value problems using Euler's, Modified Euler’s and Runge-Kutta methods (fourth-order).

Curve Fitting: Curve fitting by the method of least squares- fitting of straight lines, second degree parabolas and more general curves.

Probability Distribution: Mathematical expectations, Definition of probability distribution (Probability Mass Function and Probability Density Function), Poisson, Geometric, Binomial, Uniform and Normal distributions.

Correlation and Regression: Bivariate distribution, correlation coefficients, regression lines, formula for regression coefficients.

Laboratory Work: Lab experiments will be set in consonance with materials covered in the theory using MATLAB.

Course Learning Objectives (CLO)

The students will be able to:

1. Learn how to obtain numerical solution of nonlinear equations using bisection, Newton and fixed-point iteration methods.
2. Solve system of linear equations numerically using direct and iterative methods.
3. Analyze the correlated data using the least square and regression curves.
4. Solve integration and initial value problems numerically.
5. Solve real life problems using various probability distributions.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

6. Approximate the data and functions using interpolating polynomials.

UEC612: DIGITAL SYSTEM DESIGN

L	T	P	Cr
3	1	2	4.5

Course Objective: To familiarize the student with the analysis, design and evaluation of digital systems of medium complexity that are based on SSI, MSI and Programmable logic devices. Also, to familiarize the students with the issues in the design of iterative networks, timing analysis of synchronous and asynchronous systems.

Syllabus

Binary Codes: Review of special binary codes, Error detection and correction codes.

Combinational Circuits: Q. M. Method, Variable Map Method, Ripple carry adder, BCD adder, High speed adder, Subtractor, Code conversion, Magnitude comparators, Applications of Encoders, Decoders, MUX, DEMUX, Implementations using ROM, PLA, PAL. Standard ICs and their applications. Using combinational modules to design digital systems, Iterative networks.

Sequential Circuits: Various types of latches and flip-flops and their conversions, Universal Shift Registers, Counters – Ring, Johnson, Design of Counters, Timing issues, Setup and hold times, operating frequency limitations, Static Timing Analysis, Standard ICs for their applications, Finite State Machines – Moore and Mealy, Design of Synchronous and Asynchronous sequential circuits, Races and hazards, hazard free design.

Logic Circuits: DTL, TTL, MOS, CMOS logic families their comparison, Detailed study of TTL & CMOS logic families and their characteristics i.e. Fan-in, Fan-out, Unit load, Propagation delay, Power dissipation, Current & voltage parameters, Tristate Logic, Interfacing of TTL & CMOS logic families, reading and analyzing Datasheets, Performance estimation of digital systems.

HDL: Introduction, Structure of HDL Module, Operators, Data types, Types of Descriptions, Simulation and synthesis, Brief comparison of VHDL and Verilog. Data-Flow Descriptions: Highlights of Data flow descriptions, Structure of data-flow description, Data type-vectors.

Familiarization with standards: IEEE 91a-1991 and IEEE 91-1984.

Laboratory Work: To study standard ICs and their usage, latches and Flip-flops, Design of registers and asynchronous/synchronous up/down counters, Variable modulus counters, Design of Finite State Machines, Study of timing waveforms, Usage of IC tester. Programming of combinational and sequential systems using VHDL or Verilog.

Course Learning Objectives (CLO)

The students will be able to:

1. Apply various minimization methods to simplify the boolean functions and construct the circuit using logic gates
2. Design the combinational circuits and iterative networks using basic modules.
3. Design and analyze sequential circuits and systems.
4. Evaluate the performance of ICs of the logic families.
5. Design, simulate and synthesize the digital systems using HDL.

UEC404: SIGNALS AND SYSTEMS

L	T	P	Cr
3	1	2	4.5

Course Objective: The aim of this subject is to develop analytical capability of students, by which they would be able to handle signal processing related problems and projects. The knowledge of various transforms will help students to work in multi-disciplinary fields of engineering in group activities.

Representation of Signals and Systems: Signals, Basic Continuous and discrete Time signals and systems, Energy and power signals, System modeling concepts, Linear time invariant systems, Representation of signals in terms of impulses, Discrete time LTI systems continuous time LTI systems, Properties of LTI systems, Systems described by differential and difference equations, Sampling theorem, Quantization.

Fourier Analysis: Continuous and discrete time Fourier series, Trigonometric and exponential Fourier series, Properties of Fourier series, Parseval's theorem, Line spectrum, Continuous and discrete time Fourier transforms and its properties, Analysis of discrete time signals and systems, Correlation, Autocorrelation, Relation to Laplace transform.

Z-Transform: Definition of Z-transform and Properties of Z-transform, Inverse Z-transform - Power series, partial fraction expansion, residue method and their comparison, Relation between Z.T. and F.T, Transfer function, Discrete time convolution, Stability considerations, Time domain and frequency domain analysis, Solution of difference equation, Applications of Z-transforms.

Introduction to Fast Fourier Transforms: Discrete Fourier transform, Properties of DFT, Fast Fourier transforms, Divide and Conquer Approach, Decimation in time and decimation in frequency, Radix-2 FFT, Radix-4 FFT algorithms, Linear Convolution, Circular Convolution, Power spectrum and correlation with FFT.

Other transforms: Discrete Sine Transform, Discrete Cosine Transform and its types.

Familiarization with Standard: IEEE 1641-2004, IEEE 1139-1999.

Laboratory work:

Laboratory Work: Signal generation, Solving difference equation, Calculating Z-transform, Linear and Circular convolution, Correlation, DFT / IDFT, FFT algorithms using Matlab.

Course Learning Objectives (CLO)

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

The students will be able to:

1. Analyze the properties of signals and systems in the continuous-time-domain.
2. Analyze the properties of signals and systems in the discrete-time-domain.
3. Analyze the continuous-time signals and systems in the frequency-domain.
4. Analyze the discrete-time signals and systems in the frequency-domain.

2. Papoulis,A., Probability Random Variables and Stochastic Processes, McGraw Hill, 2008

UEC513: EMBEDDED SYSTEMS

L	T	P	Cr
3	0	2	4.0

Course Objective: The objective of this course is to equip students with the necessary fundamental knowledge and skills that enable them to design basic embedded systems. It covers architecture, programming of ARM processors and its interfacing with peripheral devices.

Syllabus

Introduction to Embedded Systems: Definition, Embedded Systems Vs General Computing Systems, Classification of Embedded Systems, Major application areas. General purpose processor architecture and organization, Von-Neumann and Harvard architectures, CISC and RISC architectures, Big and Little endian processors, Processor design trade-offs, Processor cores: soft and hard.

Introduction to ARM Processor: The ARM design philosophy, ARM core data flow model, Architecture, Register set, ARM7TDMI Interface signals, General Purpose Input Output Registers, Memory Interface, Bus Cycle types, Operational Modes, Pipeline: ARM 3 stage Pipeline, ARM family attribute comparison. ARM 5 stage Pipeline, Pipeline Hazards, Data forwarding.

Programming based on ARM7TDMI: ARM Instruction set, condition codes, Addressing modes, Interrupts, Exceptions and Vector Table. Instruction Format Assembly Language Programming, Thumb state, Thumb Programmers model, Thumb Instruction format, Thumb Applications, ARM coprocessor interface and Instructions.

ARM Tools and Interfacing of Peripherals: ARM Development Environment, Arm Procedure Call Standard (APCS), Example C/C++ programs, Embedded software development, Image structure, linker inputs and outputs, Protocols (I2C, SPI), Memory Protection Unit (MPU). Physical Vs Virtual Memory, Paging, Segmentation. The Advanced Microcontroller Bus Architecture (AMBA), DMA, Peripherals, Interfacing of peripherals with ARM.

Familiarization with Standards: IEEE 1275.1-1994 and IEEE 1754.

Laboratory Work: Introduction to Kiel Software, Introduction to ARM processor kit, Programming examples of ARM processor. Interfacing of LED, Seven Segment Display, Stepper Motor, LCD with ARM7TDMI processor.

Course Learning Objectives (CLO)

The students will be able to:

1. Explain embedded systems, their processor architecture, and distinguish them from general-purpose computing systems.
2. Describe the internal architecture of ARM processors, their instructions and formats, and create ARM-based programs for specific tasks.
3. Interpret thumb mode operations and integrate various coprocessors in embedded systems.
4. Analyze different pipeline structures and evaluate hazards.
5. Demonstrate the interfacing of various hardware peripherals in embedded systems.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UTA024 - ENGINEERING DESIGN PROJECT-II
(Including 2 self effort hours)

L	T	P	Cr
1	0	4	3.0

Course Objective: The project will introduce students to the challenge of electronic systems design & integration. The project is an example of '*hardware and software co-design*' and the scale of the task is such that it will require teamwork as a coordinated effort.

Syllabus

Hardware overview of Arduino:

- Introduction to Arduino Board: Technical specifications, accessories and applications.
- Introduction to Eagle (PCB layout tool) software.

Sensors and selection criterion:

- Concepts of sensors, their technical specifications, selection criterion, working principle and applications such as IR sensors, ultrasonic sensors.

Active and passive components:

- Familiarization with hardware components, input and output devices, their technical specifications, selection criterion, working principle and applications such as-
 - Active and passive components: Transistor (MOSFET), diode (LED), LCD, potentiometer, capacitors, DC motor, Breadboard, general PCB etc.
 - Instruments: CRO, multimeter, Logic probe, solder iron, desolder iron
 - Serial communication: Concept of RS232 communication, Xbee
- Introduction of ATtiny microcontroller based PWM circuit programming.

Programming of Arduino:

- Introduction to Arduino: Setting up the programming environment and basic introduction to the Arduino micro-controller.
- Programming Concepts: Understanding and Using Variables, If-Else Statement, Comparison Operators and Conditions, For Loop Iteration, Arrays, Switch Case Statement and Using a Keyboard for Data Collection, While Statement, Using Buttons, Reading Analog and Digital Pins, Serial Port Communication, Introduction programming of different type of sensors and communication modules, DC Motors controlling.

Basics of C#:

- Introduction: MS.NET Framework Introduction, Visual Studio Overview and Installation
- Programming Basics: Console programming, Variables and Expressions, Arithmetic Operators, Relational Operators, Logical Operators, Bitwise Operators, Assignment Operators, Expressions, Control Structures, Characters, Strings, String Input, serial port communication: Read and write data using serial port.
- Software code optimization, software version control.

Laboratory Work:

Schematic circuit drawing and PCB layout design on CAD tools, implementing hardware module of IR sensor, Transmitter and Receiver circuit on PCB.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Bronze Challenge: Single buggy around track twice in clockwise direction, under full supervisory control. Able to detect an obstacle. Parks safely. Able to communicate the state of the track and buggy at each gantry stop to the console.

Silver Challenge: Two buggies, both one loop around, track in opposite directions under full supervisory control. Able to detect an obstacle. Both park safely. Able to communicate the state of the track and buggy at each gantry stop with the console.

Gold Challenge: Same as silver but users must be able to enter the number of loops around the track beforehand to make the code generalized.

Course Learning Objectives (CLO)

The students will be able to:

1. Recognize issues to be addressed in a combined hardware and software system design.
2. Draw the schematic diagram of an electronic circuit and design its PCB layout using CAD Tools.
3. Apply hands-on experience in electronic circuit implementation and its testing.
4. Demonstrate programming skills by integrating coding, optimization and debugging for different challenges.
5. Demonstrate teamwork skills by assigning tasks and integrating the contributions of each team member.

Text Books

1. Michael McRoberts, Beginning Arduino, Technology in action publications, 2nd Edition.
2. Alan G. Smith, Introduction to Arduino: A piece of cake, CreateSpace Independent Publishing Platform (2011).

Reference Books

1. John Boxall, Arduino Workshop - a Hands-On Introduction with 65 Projects, No Starch Press; 1st edition (2013).

SEMESTER V

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UNC501: OPERATING SYSTEMS

L	T	P	Cr
3	0	2	4.0

Course Objective: To understand the role, responsibilities, and the algorithms involved for achieving various functionalities of an Operating System.

Syllabus

Introduction and System Structures: Computer-System Organization, Computer-System Architecture, Operating-System Structure, Operating-System Operations, Process Management, Memory Management, Storage Management, Protection and Security, Computing Environments, Operating-System Services, User and Operating-System Interface, System Calls, Types of System Calls, System Programs, Operating-System Design and Implementation, Operating-System Structure.

Process Management: Process Concept, Process Scheduling, Operations on Processes, Inter-process Communication, Multi-threaded programming: Multicore Programming, Multithreading Models, Process Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms, Multiple-Processor Scheduling, Algorithm Evaluation.

Deadlock: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.

Memory Management: Basic Hardware, Address Binding, Logical and Physical Address, Dynamic linking and loading, Shared Libraries, Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of the Page Table, Virtual Memory Management: Demand Paging, Copy-on-Write, Page Replacement, Allocation of Frames, Thrashing, Allocating Kernel Memory.

File Systems: File Concept, Access Methods, Directory and Disk Structure, File-System Mounting, File Sharing, Protection, File-System Structure, File-System Implementation, Directory Implementation, Allocation Methods, Free-Space Management.

Disk Management: Mass Storage Structure, Disk Structure, Disk Attachment, Disk Scheduling, Disk Management, Swap-Space Management, RAID Structure.

Protection and Security: Goals of Protection, Principles of Protection, Domain of Protection, Access Matrix, Implementation of the Access Matrix, Access Control, Revocation of Access Rights, Capability-Based Systems, The Security Problem, Program Threats, System and Network Threats, User Authentication, Implementing Security Defenses, Firewalling to Protect Systems and Networks.

Concurrency: The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic Problems of Synchronization, Monitors.

Laboratory work: To explore detailed architecture and shell commands in Linux/Unix environment, and to simulate CPU scheduling, Paging, Disk-scheduling and process synchronization algorithms.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Course Learning Objectives (CLO)

The students will be able to:

1. Explain the structure, architecture, and operations of computer systems, including system calls and resource management.
2. Analyze scheduling algorithms, interprocess communication, and multithreading models for efficient process management.
3. Implement memory allocation techniques, including paging, segmentation, and virtual memory, for efficient resource utilization.
4. Develop strategies for file system implementation, disk scheduling, RAID structures, and swap-space management to optimize storage performance.
5. Apply methods to handle deadlocks and design synchronization techniques to ensure secure and concurrent system operations.

Text Books

1. Operating System Concepts, Silberschatz A., Galvin B. P. and Gagne G., John Wiley & Sons Inc, 9th ed., 2013.
2. Operating Systems Internals and Design Principles, Stallings W., Prentice Hall, 9th ed., 2018.

Reference Books

1. Understanding the Linux Kernel, Bovet P. D., Cesati M., O'Reilly Media, 3rd ed., 2006.
2. Introduction to Operating System Design and Implementation: The OSP 2 Approach, Kifer M., Smolka A. S., Springer, 2007.

UEC716: DATABASE MANAGEMENT SYSTEMS

L	T	P	Cr
3	0	2	4.0

Course Objective: To become familiar with different types of databases and their applications and learn different types of techniques and strategies.

Syllabus

Introduction: Data, data processing requirement, desirable characteristics of an ideal data processing system, traditional file based system, its drawback, concept of data dependency, Definition of database, database management system, 3-schema architecture, database terminology, benefits of DBMS.

Relational Database: Relational data model: Introduction to relational database theory: definition of relation, keys, relational model integrity rules, concept of Relational algebra and Relational Calculus.

Database Analysis: Conceptual data modeling using E-R data model -entities, attributes, relationships, generalization, specialization, specifying constraints, Conversion of ER Models to Tables, Practical problems based on E-R data model.

Relational Database Design: Functional Dependency, types of functional dependencies, Armstrong axioms, closure of fd's, canonical cover, Normalization- 1NF, 2NF, 3NF, BCNF, 4NF and 5NF and practical problems based on these forms.

Transaction Management and Concurrency control: Concept of Transaction, States of Transaction and its properties, Need of Concurrency control, concept of Lock, Two phase locking protocol.

Recovery Management: Need of Recovery Management, Concept of Stable Storage, Log Based Recovery Mechanism, Checkpoint.

Database Implementation: Introduction to SQL, DDL aspect of SQL, DML aspect of SQL – update, insert, delete & various form of SELECT- simple, using special operators, aggregate functions, group by clause, sub query, joins, co-related sub query, union clause, exist operator. PL/SQL - cursor, stored function, stored procedure, triggers, error handling, and package.

Laboratory work: Students will perform SQL commands to demonstrate the usage of DDL and DML, joining of tables, grouping of data and will implement PL/SQL constructs. They will also implement one project.

Project: It will contain database designing & implementation, should be given to group of 2-4 students. While doing projects emphasis should be more on back-end programming like use of SQL, concept of stored procedure, function, triggers, cursors, package etc. Project should have continuous evaluation and should be spread over different components.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Course Learning Objectives (CLO)

The students will be able to:

1. Analyze the Information Systems as socio-technical systems, its need and advantages as compared to traditional file-based systems.
2. Design database using E-R data model by identifying entities, attributes and relationships.
3. Apply and create Relational Database Design process with Normalization of data.
4. Implement the concepts of transaction management, concurrence control and recovery management.
5. Demonstrate use of SQL and PL/SQL to implementation database applications.

Text Books

1. Database System Concepts, Silberschatz A., Korth F. H. and Sudarshan S., Tata McGraw Hill, 6th ed, 2010.
2. Fundamentals of Database Systems, Elmasri R. and Navathe B. S., Pearson, 7th ed, 2016.

Reference Books

1. SQL, PL/SQL the Programming Language of Oracle, Bayross I., BPB Publications, 4th ed, 2009.
2. Modern Database Management, Hoffer J., Venkataraman, R. and Topi, H., Pearson, 12th ed 2016.

UEC502: DIGITAL SIGNAL PROCESSING

L	T	P	Cr
3	1	2	4.5

Course Objective: The subject of discrete-time signal processing constitutes an important part of communication and computer engineering. The signals are processed to generate a sequence of numbers that represent samples of a continuous variable in a domain such as time, space, or frequency. Major objective is to apply various mathematical and computational algorithms to continuous-time and discrete-time signals to produce a modified signal that's of higher quality than the original signal, which in turn improves the efficiency of underlying systems. Its utility to analyze the vital characteristics of signals and systems in time- and frequency-domain makes it an inevitable module of engineering practice.

Syllabus

Brief Review of Transforms: Introduction to sampling theorem, Concept of frequency in continuous-time and discrete-time signals, Brief details about Laplace-transform, z-transform, CTFT, DTFT and DFT, decimation-in-time and decimation-in-frequency FFT algorithms.

Discrete-time Signals' and Systems' Frequency Response Analysis: Power density spectrum of periodic signals, Energy density spectrum of aperiodic signals, Cepstrum, Concept of bandwidth, LTI systems as frequency-selective filters (LPF, HPF, BPF, digital resonators, notch filters, comb filters and all pass filters), inverse systems and deconvolution.

Implementation of Discrete-time Systems: LTI systems characterized by constant-coefficient difference equations and their impulse response attributes. Structures for FIR systems, Structures for IIR systems, Recursive and nonrecursive realizations, Linear filtering methods based on DFT, and Goertzel algorithm.

Design of FIR Filters: Causality and its implications, Characteristics of practical frequencyselective filters, Symmetric and antisymmetric FIR filters, Design of linear-phase FIR filters using window method (Hamming, Hanning, Kaiser etc.), Design of FIR filters using frequencysampling method.

Design of IIR Filters: Characteristics of commonly used analog filters, Design of IIR filters from analog filters by approximation of derivatives, Design by impulse invariance, Design by bilinear transformation.

Multirate Signal Processing: Decimation by a factor D, Interpolation by a factor I, Sampling rate conversion by a rational factor I/D, Polyphase filter structures for decimation and interpolation, sampling rate conversion with cascaded integrator comb filters, Introduction to digital filter banks.

Optimum Filtering and Equalization: Wiener filtering, Linear prediction and Concept of equalization.

Familiarization with Standards: IEEE 265-1966 , IEEE 1057-2007, ISO/IEC 11172-3.

Laboratory Work: MATLAB software based lab practicals related to DSP and its applications.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Course Learning Objectives (CLO)

The students will be able to:

1. Analyze the frequency-domain properties of signals and systems
2. Apply linear time-invariant systems for discrete-time signal processing.
3. Design and implement FIR frequency-selective filters.
4. Design and implement IIR frequency-selective filters
5. Simplify engineering system problems using multirate-signal processing and optimum-filtering approaches

Text Books

UEC310: INFORMATION AND COMMUNICATION THEORY

L	T	P	Cr
3	1	0	3.5

Course Objective: To gain knowledge and understand the concepts of probability theory, random variables, stochastic processes and Information theory. To familiarize the students with the applications of probabilistic/stochastic techniques/methods in communication engineering and information theory.

Syllabus

Random Variable: Review of Probability; Bernoulli Trials; Concepts of Random Variables, Distribution and Probability Density Functions, Binomial Random variables; Conditional Distributions, Bayes' Theorem; Function of One Random Variable; Mean and Variance, Moments, Characteristic Functions; Joint distribution, Joint density, Marginal Density; Functions of Two Random Variables: Mean, Variance; Correlation and Covariance; Central Limit Theorem.

Stochastic Processes and Noise Modelling: Stochastic Processes: Discrete And Continuous Time Processes; Probabilistic Structure of a Random Process; Mean, Autocorrelation and Autocovariance Functions; Strict-Sense Stationary and Wide-Sense Stationary (WSS) Processes; Ergodicity; Spectral Representation of a Real WSS Process-Power Spectral Density; Examples of Random Processes: White Noise and Poisson Process; Noise Statistics in Linear Time-Invariant Systems, Noise Power Spectral Densities, Signal-to-Noise-Ratio in Presence of AWGN and Interference; Probability Density of a Jointly-Gaussian Random Vector, Markov Chains.

Estimation & Hypothesis Testing: Point Estimation; Estimation Methods: Minimum Mean-Square Error (MMSE) and Linear MMSE Estimators, Maximum Likelihood Estimation; Simple Binary Hypothesis Tests: Decision Criteria, Error in Hypothesis Testing, Neyman Pearson Tests, Z-Test, and P-Value Test.

Information Theory: Information Measure and Entropy, Information Source, Markov Source, Adjoint of an Information Source, Joint and Conditional Information Measure, Instantaneous Codes, Kraft-McMillan Equality, Shannon First Theorem, Coding Strategies and Huffman Coding, Introduction to Information Channels, Mutual Information and Channel Capacity, Channel Capacity Calculations for Different Channels, Shannon Second Theorem.

Familiarization with Standard: IEEE P1933.1.

Course Learning Objectives (CLO)

The students will be able to:

1. Apply the probabilistic concepts as well as properties of the random variables
2. Analyze engineering problems in the presence of randomness and interference by applying the concepts of stochastic processes, stationary properties, spectral

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

representation, and noise statistics.

3. Incorporate the estimation and hypothesis testing principles to find remedial solutions
4. Employ information theory and coding concepts, to improve information symbol transmission rate, and also use it for data compression.

UNC503: ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING

L	T	P	Cr
3	0	2	4.0

Course Objective: This course provides an introduction to Artificial Intelligence (AI), Machine Learning and their fundamental concepts. It covers a wide range of topics including problem-solving, search algorithms, machine learning, neural networks, and ethics. The course is designed for students who have a basic understanding of programming and mathematics.

Syllabus

Introduction to Artificial Intelligence: Overview of AI and its applications, Intelligent agents and problem-solving approaches, Uninformed search algorithms (breadth-first, depth-first, etc.), Informed search algorithms (heuristics, A*, etc.)

Constraint Satisfaction Problems and Adversarial Search: Introduction to constraint satisfaction problems, Constraint propagation and backtracking algorithms, Search and game-playing techniques, Expectimax search and utility evaluation

Markov Decision Processes and Reinforcement Learning: Introduction to Markov decision processes (MDPs), Value iteration and policy iteration algorithms, Model-free reinforcement learning, Exploration-exploitation tradeoff and function approximation in RL

Probabilistic Models and Advanced Applications: Introduction to probability theory in AI, Markov models and hidden Markov models (HMMs), Applications of HMMs in speech recognition, Bayes' nets: representation, inference, sampling, Decision diagrams and the value of perfect information, Machine learning algorithms: Naive Bayes, perceptrons, and clustering, Advanced applications in natural language processing, games, computer vision, and robotics

Laboratory Work: Students will apply the fundamentals learned during the lecture classes for better understanding.

1. Apply the fundamental concepts associated with artificial intelligence and machine learning.
2. Implement the AI based search algorithms.
3. Apply AI algorithms using Markov decision process and reinforcement learning.
4. Develop and analyze machine learning algorithms for various tasks.

Text Books

1. Artificial Intelligence: A Modern Approach, Stuart Russell and Peter Norvig.
2. Machine Learning: A Probabilistic Perspective, Kevin P. Murphy.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Reference Books

1. Deep Learning, Ian Goodfellow, Yoshua Bengio, and Aaron Courville.
2. Pattern Recognition and Machine Learning, Christopher Bishop.
3. Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow, Aurélien Géron.

UTA025: INNOVATION AND ENTREPRENEURSHIP

L	T	P	Cr.
1	0	2*	3.0

Course Objectives: This course aims to provide the students with a basic understanding in the field of entrepreneurship, entrepreneurial perspectives, concepts and frameworks useful for analyzing entrepreneurial opportunities, understanding eco-system stakeholders and comprehending entrepreneurial decision making. It also intends to build competence with respect business model canvas and build understanding with respect to the domain of startup venture finance.

Introduction to Entrepreneurship: Entrepreneurs; entrepreneurial personality and intentions - characteristics, traits and behavioral; entrepreneurial challenges.

Entrepreneurial Opportunities: Opportunities- discovery/ creation, Pattern identification and recognition for venture creation: prototype and exemplar model, reverse engineering.

Entrepreneurial Process and Decision Making: Entrepreneurial ecosystem, Ideation, development and exploitation of opportunities; Negotiation, decision making process and approaches, - Effectuation and Causation.

Crafting business models and Lean Start-ups: Introduction to business models; Creating value propositions - conventional industry logic, value innovation logic; customer focused innovation; building and analyzing business models; Business model canvas, Introduction to lean startups, Business Pitching.

Organizing Business and Entrepreneurial Finance: Forms of business organizations; organizational structures; Evolution of organization, sources and selection of venture finance options and its managerial implications. Policy Initiatives and focus; role of institutions in promoting entrepreneurship.

Course learning outcomes (CLO):

Upon successful completion of the course, the students should be able to:

1. Explain the fundamentals behind the entrepreneurial personality and their intentions
2. Discover/create and evaluate opportunities.
3. Identify various stakeholders for the idea and develop value proposition for the same.
4. Describe various Business Models and design a business model canvas.
5. Analyse and select suitable finance and revenue models for start-up venture.

SEMESTER VI

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UEC519: ANALOG AND DIGITAL COMMUNICATION

L	T	P	Cr
3	1	2	4.5

Course Objective: The aim of this course is to build the foundation for communication system design focusing on the challenges of digital communication. The intended objective is to impart knowledge to the engineering students about the transmission/reception of data over a physical layer through any channel. They will be able to identify the physical interpretation of mathematical expressions/modelling, while dealing with communication systems in the presence of noise, interference and fading

Syllabus

Introduction to Analog communications: Amplitude modulation and demodulation, Angle modulation and demodulation, spectra of AM and FM, Pre-emphasis and De-emphasis, direct and indirect methods of Frequency demodulation, Super heterodyne receivers.

Introduction to Pulse Modulation Systems: Basic model of digital communication system, Bandpass and low pass signal and system representations, low pass equivalent of bandpass signals and system, Pulse modulation. Sampling process. Pulse Amplitude and Pulse code modulation (PCM), Differential pulse code modulation. Delta modulation (DM), Adaptive Delta modulation (ADM), noise considerations in PCM, Time Division multiplexing.

Digital Formats and Baseband Shaping for Data Transmission: NRZ, RZ, Manchester formats, Power spectra of discrete-PAM signals, ISI, Nyquist's criterion for distortion less baseband transmission with ideal and practical solutions, Correlative coding

Fundamentals of Detection and Estimation: Gram-Schmidt orthogonalization procedure, MAP criterion, maximum likelihood (ML) decision rule, Correlator and Matched filter receiver structures, ML estimation procedure.

Digital Modulation Schemes: Details about Binary-ASK, BFSK, BPSK, QPSK, M-ary ASK, M-ary FSK, M-ary PSK, M-ary QAM; Minimum Shift Keying (MSK), Gaussian MSK (GMSK), probability of bit-error & symbol-error calculations for digital modulation techniques under AWGN channel.

Error Control Coding: Need and types of error control coding, Linear block-code: generation and syndrome decoding, Convolutional code: generation and Viterbi decoding.

Familiarization with standard: IEEE 1007-1991, IEEE P802.11.

Laboratory Work: Practical/experiments based on the hardware using communication kits, and simulation with the help of available simulation packages.

Course Learning Objectives (CLO)

The students will be able to:

1. Evaluate the performance of Analog modulation techniques.
2. Analyze the concept of different pulse modulation techniques.
3. Evaluate PAM signals, baseband shaping for ISI reduction, and correlative coding.
4. Perform statistical analysis of the transmitted and received modulated waveforms from estimation and detection point of view.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

5. Evaluate the performance of digital modulation techniques of digital communication system operating over AWGN channel
6. Analyze the concepts of error control coding

Text Books

2. John G Proakis, Digital Communications, McGraw-Hill, Third Edition (1994)
3. Simon Haykin, Digital Communications, Wiley, Student Edition (1988)
4. Bernard Sklar, Digital Communications: Fundamentals and Applications, Prentice Hall (2001)

Reference Books

1. Taub & Schilling, Principles of Communication Systems, McGraw-Hill Publications, Second Edition (1998)
2. Simon Haykin, Communication Systems, Wiley, Fourth Edition (2006)
3. B.P. Lathi, Modern Analog and Digital Communication Systems, Oxford University Press, Third Edition (1998)

UEC610: COMPUTER ARCHITECTURE

L	T	P	Cr
3	0	0	3

Course Objective: To introduce the concept of parallelism followed in the modern RISC based computers by introducing the basic RISC based DLX architecture. To make the students understand and implement various performance enhancement methods like memory optimization, Multiprocessor configurations, Pipelining and interfacing of I/O structures using interrupts and to enhance the student's ability to evaluate performance of these machines by using evaluation methods like CPU time Equation, MIPS rating and Amdahl's law.

Syllabus

Fundamentals of Modern Computer Design:

Historical Evolution of Microprocessors, Basic Functional Units of a Computer and its operational Concepts. Computer Types - Von-Neuman & Harvard Architecture, CISC and RISC architectures. Performance metrics- CPU Time Equation, MIPS Rating, Amdahl's Law and Measure of system Availability (MTTF, MTTR), Control Unit- Hardwired and micro-programmed Control unit.

Instruction Set Principles: Classification of Instruction set architectures- Stack , Register and Accumulator based, Addressing modes of DLX architecture, Instruction format , DLX ISA, Coding Examples Effectiveness of DLX.

Pipelining and Parallelism: Idea of pipelining, The basic pipeline for DLX processor, the MIPS pipeline Design issues of Pipeline Implementation, Pipeline Hazards-Structural Hazards, Data hazards, Control Hazards, Techniques to remove—Structural Hazards, Overcoming data hazards with Forwarding/ Bypassing and dynamic scheduling, overcoming Control Hazards –Static Techniques – Freeze the pipeline, Prediction Techniques , Advanced DLX hardware Dynamic techniques – 1/2/n bit predictors , Branch delay Slot , Pipeline Scheduling and Loop Unrolling and Scheduling. Multicycle operations, Superscalar DLX Architecture, The VLIW Approach.

Memory Hierarchy Design: Introduction to Multilevel Memories, Principle of Temporal and Spatial Locality, Cache memory, Cache Addressing, Cache Organization, Write Policies, Reducing Cache Misses, Cache Associatively Techniques, Reducing Cache Miss Penalty, Reducing Hit Time, Main Memory Technology, Virtual memory and its addressing, Fast Address Translation, Page tables, Multilevel Page table, Translation Lookaside buffer, Crosscutting issues in the design of Memory Hierarchies.

Multiprocessors: Characteristics of Multiprocessor Architectures, Flynn's multiprocessor architecture, Multiple Centralized Shared Memory Architectures- Benes and Butterfly network , Distributed Shared Memory Architectures, Cache Coherence , Synchronization, Models of Memory Consistency-Snoopy Protocols .

Input/ Output Organization and Buses: Accessing I/O Devices, Interrupts, Handling Multiple Devices, Controlling device Requests, Exceptions, Direct Memory Access, Bus arbitration policies, Synchronous and Asynchronous buses, Parallel port, Serial port, Standard I/O interfaces, Peripheral Component Interconnect (PCI) bus and its architecture, SCSI Bus, Universal Synchronous Bus (USB) Interface.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Familiarization with standards: IEEE P802.11, ANSI/IEEE standard 754.

Course Learning Objectives (CLO)

1. Explain the major differences between a RISC and a CISC based processor.
2. Evaluate the performance of a processor with an enhancement applied and analyze it for future application.
3. Identify the concept of parallelism and pipelining and hazard removal in context to the same.
4. Investigate the Memory Hierarchy design , Memory Addressing and Address translation
5. Identify Multiprocessor Configuration , Memory Interconnections- Coherence and Input/output devices interfacing to a processor

UEC750: MOS CIRCUIT DESIGN

L	T	P	Cr
3	1	2	4.5

Course Objective: The course aims to present the principles and techniques of both MOS based digital and analog circuit design, connecting digital circuits, logic design, and analog components with the fundamental device physics, processing techniques and transistor level characteristics of Silicon integrated circuits, both in theoretical and practical aspects.

Syllabus

MOS Transistor Theory: MOS Structure and its operation, I-V Characteristics, Threshold Voltage Equation, Body Effect, Second Order Effects, Scaling Theory and Limitations of Scaling, Short-Channel Effects, MOS Capacitors, MOS switch, Noise in MOS transistors.

NMOS & CMOS Process technology: Evolution of ICs. Masking sequence of NMOS and CMOS Structures, Latch up in CMOS, Electrical Design Rules, Stick Diagram, Layout Design.

Circuit Characterization: Resistive Load & Active Load MOS Inverters, NMOS Inverters, CMOS Inverters: Static Characteristics, Switching Characteristics, Interconnect Parasitics, Propagation Delay, Static and Dynamic Power Dissipation, Noise Margin, Logic Threshold Voltage, Logical effort, Driving large loads.

Combinational Circuits: MOS Logic Circuits with Depletion NMOS loads, CMOS Logic Circuits, CMOS logic Styles, Realization of simple gates, Complex logic circuits, Pass Gate, Transmission Gate.

Operation of MOS Circuits: Small Signal equivalent model and operation of MOS Transistor, MOS as an Amplifier, Calculation of the DC Bias Point, Voltage Gain, Transconductance, Modeling the Body Effect, Biasing of Discrete MOS Amplifiers and Integrated Circuit MOS Amplifiers.

Familiarization with standard: IEEE 1181-1991.

Laboratory Work: Familiarization with Circuit design/simulation tools (Cadence/Mentor/Tanner Tools) for schematic and layout entry, Circuit simulation using SPICE. DC transfer Characteristics of Inverters, Transient response, Calculating propagation delays, rise and fall times, Circuit design of inverters, Complex gates with given constraints.

Course Learning Objectives (CLO)

1. Understand MOS transistor operation.
2. Illustrate the fabrication process for NMOS and CMOS circuits.
3. Design and analyze NMOS and CMOS inverters.
4. Implement the various combinational circuits using different logic styles.
5. Analyze MOS transistor as an amplifier.

UHU005: HUMANITIES FOR ENGINEERS

L	T	P	Cr
2	0	2	3.0

Course Objective: The objective of the course is to understand the interplay between, psychological, ethical and economic principles in governing human behaviour. The course is designed to help the students to understand the basic principles underlying economic behaviour, to acquaint students with the major perspectives in psychology to understand human mind and behaviour and to provide an understanding about the how ethical principles and values serve as a guide to behaviour on a personal level and within professions.

Syllabus

UNIT I: PSYCHOLOGICAL PERSPECTIVE

Introduction to Psychology: Historical Background, Psychology as a science. Different perspectives in Psychology.

Perception and Learning: Determinants of perception, Learning theories, Behavior Modification.

Motivational and Affective basis of Behaviour: Basic Motives and their applications at work. Components of emotions, Cognition and Emotion. Emotional Intelligence.

Group Dynamics and Interpersonal relationships.

Development of self and personality.

Transactional Analysis.

Culture and Mind.

UNIT II: HUMAN VALUES AND ETHICAL PERSPECTIVE

Values: Introduction to Values, Allport-Vernon Study of Values, Rokeach Value Survey, Instrumental and Terminal Values.

Value Spectrum for a Good Life: Role of Different Types of Values such as Individual, Societal, Material, Spiritual, Moral, and Psychological in living a good life.

Moral and Ethical Values: Types of Morality, Kant's Principles of Morality, Factors for taking ethical decisions, Kohlberg's Theory of Moral Development.

Analyzing Individual human values such as Creativity, Freedom, Wisdom, Love and Trust.

Professional Ethics and Professional Ethos, Codes of Conduct, Whistle-blowing, Corporate Social Responsibility.

UNIT III: ECONOMIC PERSPECTIVE

Basics of Demand and Supply

Production and cost analysis

Market Structure: Perfect and Imperfect Markets.

Investment Decisions: capital Budgeting, Methods of Project Appraisal.

Macroeconomic Issues: Gross domestic product (GDP), Inflation and Financial Markets.

Globalisation: Meaning, General Agreement on Trade and tariffs (GATT), World Trade Organisation (WTO). Global Liberalisation and its impact on Indian Economy.

Laboratory Work:

4. Experiments on learning and behaviour modification.
 5. Application of Motivation Theories: Need based assessment.
 6. Experiments on understanding Emotions and their expressions.
 7. Personality Assessment.
 8. Exercises on Transactional analysis.
 9. Role plays, case studies, simulation tests on human behaviour.
-
10. Practical application of these concepts by means of Discussions, Role-plays and Presentations, Analysis of Case studies on ethics in business and CSR.
-
11. The practicals will cover numerical on demand, supply, market structures and capital budgeting, Trading games on financial markets, Group discussions and presentations on macroeconomic issues. The practicals will also cover case study analysis on openness and globalisation and the impact of these changes on world and Indian economy.

Micro Project: Global Shifts and the impact of these changes on world and Indian economy.

Course Learning Objectives (CLO)

Upon the successful completion of this course, students will be able to:

1. Improve the understanding of human behavior with the help of interplay of professional, psychological and economic activities.
2. Able to apply the knowledge of basic principles of psychology, economics and ethics for the solution of engineering problems.
3. Explain the impact of contemporary issues in psychology, economics and ethical principles on engineering.

SEMESTER VII

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UEC640: IOT based Systems

L	T	P	Cr
2	0	2	3.0

Course Objective: The objective of this course is to impart necessary and practical knowledge of components of Internet of Things and develop skills required to build real-life IoT based projects.

Introduction to IoT: Architectural Overview, Design principles and needed capabilities, IoT Applications, Sensing, Actuation, Basics of Networking, M2M and IoT Technology Fundamentals- Devices and gateways, Data management, Business processes in IoT, Everything as a Service(XaaS), Role of Cloud in IoT, Security aspects in IoT.

Elements of IoT: Hardware Components- Computing (Arduino, Raspberry Pi), Communication, Sensing, Actuation, Basics of Sensor Networks. I/O interfaces. Software Components- Programming API's (using Python/Node.js/Arduino) for Communication Protocols-MQTT, ZigBee, Bluetooth, CoAP, UDP, TCP.

IoT Application: Development Solution framework for IoT applications- Implementation of Device integration, Data acquisition and integration

IoT Case Studies: IoT case studies and mini projects based on Industrial automation, Transportation, Agriculture, Home Automation

Laboratory Work:

1. a) Familiarize with Arduino UNO and interface LED/Buzzer with Arduino and write a program to turn ON LED for 1 sec after every 2 seconds.
b) To interface the Push button with Arduino, write a program to turn ON the LED when a push button is pressed.
2. a) To interface the LDR sensor with Arduino, write a program to print LDR readings on a serial monitor.
b) According to the LDR readings, write a program to turn ON & OFF multiple LEDs.
3. a) To interface the DHT11 sensor with Arduino, write a program to print temperature and humidity readings on a serial monitor.
b) According to the DHT readings, write a program to turn ON & OFF multiple LEDs.
4. To interface the HC-05 Bluetooth module with Arduino, write a program to turn ON & OFF multiple LEDs with a smartphone using Bluetooth.
5. Write a program to send sensor data to a smartphone using the HC-05 Bluetooth module with Arduino.
6. Familiarize with the ESP32 Development board and write a program to set up the Bluetooth and Wi-Fi features of ESP32 MCU.
7. Write a program to control multiple LEDs using ESP32 and mobile devices with the help of MQTT Protocol.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

8. Familiarization with BLYNK Cloud Platform to set up BLYNK Cloud dashboard and control multiple LEDs using a mobile device using ESP32
9. Upload sensor data to the cloud and retrieve it on any mobile device using the BLYNK Cloud Platform.
10. Write a Program in ESP32 to control LEDs/Home appliances with the help of Google Assistant/Amazon Alexa.
11. Project Work based on various applications of IoT.

Course Learning Outcomes (CLO):

The student will be able to:

1. Analyze the design aspects of hardware and software components of IoT
2. Design Interface for I/O devices, sensors & communication modules
3. Analyze and process data from sensors
4. Apply IoT knowledge to Implement basic IoT applications on embedded platform

Text Books:

1. Pethuru Raj and Anupama C. Raman, “The Internet of Things: Enabling Technologies, Platforms, and Use Cases”, CRC Press
2. Vijay Madisetti, Arshdeep Bahga, Internet of Things, “A Hands on Approach”, University Press

Reference Books:

1. Dr. SRN Reddy, Rachit Thukral and Manasi Mishra, “Introduction to Internet of Things: A practical Approach”, ETI Labs

3. Raj Kamal, “Internet of Things: Architecture and Design”, Mc Graw Hill
4. Cuno Pfister, “Getting Started with the Internet of Things”, O Reilly Media

UEC642: DEEP LEARNING AND APPLICATIONS

L	T	P	Cr
3	0	2	4.0

Course Objective: This course provides an introduction to Deep Learning and their fundamental concepts. It covers a wide range of topics including ANN, CNN, RNN. The course is designed for students who have a basic understanding of machine learning.

Syllabus

Deep Networks: Artificial Neural Networks, Choice of Activation Functions, Gradient-based Learning, Hidden Units, Architecture Design, Backward Propagation and Differentiation, Forward/Backward Propagation, Computational Graphs, Chain Rule in Backpropagation, Stochastic Gradient Descent Algorithms, Sequential/Batch Processing, Perceptron Convergence, Principal Component Analysis, Dimensionality Reduction, Radial Basis Functions, Statistical tools for dimensionality reduction, P-value test, t-test, Soft Max and Cross Entropy .

Regularization: Regularization: Overview, Parameter Penalties, Norm Penalties as Constrained Optimization, Regularization and Underconstrained Problems, Data Augmentation, Noise Robustness, Batch Normalization, Semi-Supervised Learning, Multi-Task Learning, Early Stopping, Parameter Tying and Parameter Sharing, Sparse Representations, Bagging, Dropout. Tuning Neural Networks, Hyperparameters.

Convolutional Neural Networks

Introduction, Mechanics of Convolution Operation, Pseudo Code of Convolution operation, Convolution equation, Zero Padding, Vectorization of Convolution operation, Convolution as Matrix multiplication, Weight Sharing, Translational Invariance, Convolution on color images, Convolution layer in CNN, ReLU Layer, Pooling, Flattening, Full Connection, Convolution and Backpropagation.

Recurrent Neural Networks: Recurrent Neural Networks, Deep Sequence Modeling, RNN Gradients, Analytical Modeling of Vanishing and Exploding Gradient Problems, Encoder-Decoder Architecture, Long-Term Dependencies, Leaky Units, Long Short-Term Memory, Context Switching, Sequence to sequence architectures.

Unsupervised Deep Learning: Self Organizing Maps (SOMs), Boltzmann Machines, Auto Encoders, Variational Autoencoders (VAEs). Generative Adversarial Networks, Introduction to NLP.

Laboratory Work (if applicable)

Course Learning Objectives (CLO)

The students will be able to:

1. Explain the basics about deep learning and its applications
2. Analyse regularization of deep neural networks and various network tuning techniques
3. Design and implement CNN architectures
4. Design and implement RNN architectures

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

5. Identify and compare different unsupervised deep learning architectures.

Text Books

1. Neural Networks and Learning Machines, Simon Haykins, Pearson Education, 3rd ed., 2008.
2. Dive into Deep Learning, Aston Zhang, Zachary C Lipton, Mu Li, Alexander J Smol.

Reference Books

1. Deep Learning with Python, Francois Chollet, Manning Publications.
2. Grokking Deep Learning, Andrew Trask, Manning Publications.
3. Deep Learning, Ian Goodfellow and Yoshua Bengio and Aaron Courville, MIT Press.
4. Deep Learning: A Practitioner's Approach, Josh Patterson, Adam Gibson, O'Reilly.

SEMESTER VIII

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UNC801 DATA SCIENCE FOR ENGINEERS

L	T	P	Cr
3	0	0	3.0

Course Objective: This course will help students describe a flow process for data science problems, classify data science problems into standard typology, and develop R codes for data science solution

Syllabus

Introduction to R: Variables and Datatypes in R, Data frames, Recasting and Joining of Dataframes, Arithmetic, Logical and Matrix Operations in R, Advanced Programming in R :Functions, Control Structures, Data Visualization in R Basic Graphics

Linear Algebra for Data science Solving Linear Equations, Linear Algebra - Distance, Hyperplanes and Halfspaces, Eigenvalues, Eigenvectors

Statistical Modelling Random Variables and Probability Mass/Density Functions Sample Statistics, Hypotheses Testing

Optimization for Data Science Unconstrained Multivariate Optimization , Gradient (Steepest) Descent (OR) Learning Rule, Multivariate Optimization With Equality Constraints, Multivariate Optimization With Inequality Constraints, Introduction to Data Science, Solving Data Analysis Problems - A Guided Thought Process

Predictive Modelling Linear Regression, Model Assessment, Diagnostics to Improve Linear Model Fit, Simple Linear Regression Model Building, Simple Linear Regression Model Assessment, Multiple Linear Regression, Cross Validation, Multiple Linear Regression Modelling Building and Selection, Classification, Logistic Regression, Performance Measures, Logistic Regression Implementation in R

Algorithms K - Nearest Neighbors (kNN), K - Nearest Neighbors implementation in R, K - means Clustering, K - means Implementation in R

Course Learning Objectives (CLO)

The students will be able to:

1. Apply statistical methods and probability theory to analyze and interpret data using R language
2. Create and interpret various types of data visualizations to communicate insights effectively.
3. Understand and apply basic machine learning algorithms to engineering problems.
4. Apply data science techniques to solve real-world engineering problems, such as predictive maintenance, optimization, and system modeling.

Text Books

1. Applied Statistics and Probability for Engineers-by Douglas Montgomery
2. R for Data Science, Hadley Wichman

Reference Books

1. Introduction to Linear Algebra - by Gilbert Strang

UEC806: 5G WIRELESS COMMUNICATION SYSTEM

L	T	P	Cr
3	0	0	3.0

Course Objective: To impart knowledge about wireless communication systems and related design parameters to undergraduate students. To inculcate the ability in students to design wireless communication systems, which can provide high data rate to a large number of users. The main goal is to explore the fundamentals of wireless communication systems, including the evolution from 2G to 5G, to understand the principles and technologies behind 5G networks and standards.

Course Outcomes:

By the end of this course, students will have acquired a comprehensive understanding of wireless and mobile communication systems, with a particular focus on 5G technologies, enabling them to contribute effectively to the design, deployment, and optimization of next-generation mobile networks and services.

Introduction to Wireless and Mobile Communication:

Evolution of wireless Communication Standards from 2G to 5G, Cellular architecture and fundamental of 2G, 3G, and 4G, Introduction to 5G Usage scenarios, Spectrum for 5G, Spectrum access modes and sharing scenarios, carrier aggregation.

Wireless Communication Channel Models:

Free Space Propagation Model, Large-Scale Path Loss model, Overview of outdoor and Indoor propagation models, Small-Scale Fading and Multipath Propagation, fading channel Parameters, Rayleigh, Rician and Nakagami-m Fading Channel Model, 5G Channel Model

Physical Layer:

Introduction to diversity and combining techniques, Introduction to MIMO, Alamouti scheme, and channel capacity. Waveform in 4G: OFDM, (transmitter and receiver structure at baseband level), numerology of OFDM in LTE and IEEE 802.11, Waveform in 5G, 5G New Radio (NR), Numerology in 5G waveform, Frame structure in 5G NR, Frequency Ranges, Bandwidths, and Bands for 5G NR, Channel Bandwidth versus UE Channel Bandwidth, Overview of waveform beyond 5G, NOMA.

5G Network Architecture: Core network architecture, RAN architecture, Main Functional Entities of the 5G Core, High-Level Features of 5G Core, standalone and non-standalone mode, Service data adaptation protocol (SDAP), open RAN, multi-access edge computing (MEC), network function virtualization, Network Slicing, QoS Interworking with Non-3GPP Access Technologies

Familiarization with standards: *IEEE 802.11 to 802.11ac, 802.15, LTE:3GPP TS 21.201, 3GPP TS 36, 3Gpp standard for 5G: 5G NR,*

Course Learning Outcomes (CLOs):

The student will be able to:

1. Understand the fundamental principles of different generations of mobile communication systems.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

2. Explore key aspects of 5G New Radio (NR), including waveform numerology, frame structure, and spectrum allocation.
3. Analyse the 5G NR layer using techniques such as OFDM, diversity, and MIMO.
4. Evaluate and analyze various fading channels based on their parameters across different scenarios.
5. Understand the high-level architecture of 5G technology

Text Books:

1. Rappaport, T.S., Wireless Communication-Principles and Practice, Pearson, (2000) 2nd Edition.
2. Haykin S & Moher M., Modern Wireless Communication, Pearson, (2005) 3rd Edition.
3. Goldsmith, Andrea. Wireless communications. Cambridge university press, 2005.

5. IEEE Journal on Selected Areas in Communications
6. IEEE Communications Magazine

ELECTIVE - I

UEC518: NETWORK SECURITY

L	T	P	Cr
2	0	2	3.0

Course Objective:

This course is designed to impart a critical theoretical and detailed practical knowledge of a range of computer network security technologies as well as network security tools.

Introduction

Security Attacks, Security Services, Security Mechanisms and Principles, Security goals, malicious software, Worms, Viruses, Trojans, Spyware, Botnets.

Basic of Cryptography

Symmetric and asymmetric cryptography, cryptographic hash functions, authentication and key establishment, Message Authentication Codes (MACs), digital signatures.

Security Vulnerabilities

DoS attacks, Buffer Overflow, Race Conditions, Spoofing and Sniffing attacks, ARP Poisoning

Internet Security

TCP/IP Security, Secure Sockets Layer (SSL), Transport Layer Security (TLS), IPsec, Email Security, DNS Security.

System Security

Firewalls, Types: Packet filter (stateless, stateful), Firewall Location and Configurations, Intrusion Detection System.

Wireless Network Security

IEEE 802.11i Wireless LAN Security, Wireless Application Protocol Overview, Wireless Transport Layer Security, WAP End-to-End Security.

Laboratory Work :

Implementation of various network security algorithms to solve real time problems. Mini / major projects to solve social needs.

Course Learning Objectives (CLO)

The students will be able to:

1. Identify network vulnerabilities and apply various cryptographic algorithms and security mechanisms to protect networks from security attacks.
2. Apply security tools to locate and fix security leaks in a computer network/software.
3. Configure firewalls and IDS.
4. Implementation and configure of wireless transport layer security model.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Text Books

1. Network Security Essentials, William Stallings, Prentice Hall (2013), 5th Ed

Reference Books

1. Firewalls and Internet Security, William R. Cheswick and Steven M. Bellovin, Addison-Wesley Professional (2003), 2nd Ed.
2. Cryptography and Network Security, W. Stallings, Prentice Hall (2010), 5th Ed.

UEC536: LINEAR INTEGRATED CIRCUITS AND APPLICATIONS

L	T	P	Cr
2	0	2	3.0

Course Objective: To enhance comprehension capabilities of students through understanding of operational amplifiers, frequency response, various applications of operational amplifiers, active filters, oscillators, analog to digital and digital to analog converters and few special function integrated circuits.

Introduction to Differential Amplifiers: Differential amplifier, Configurations of differential amplifier, Analysis of single-input balanced-output, single-input unbalanced-output, dual-input balanced-output and dual-input unbalanced-output differential amplifiers.

Operational Amplifier (Op-amp): Various characteristics of Op-amp, CMRR, PSRR, internal structure of Op-amp, ideal Op-amp inverting and non-inverting configuration, ideal open-loop and closed-loop operation of Op-amp, feedback configurations: voltage-series feedback amplifier, voltage-shunt feedback amplifier, differential amplifiers with one & two Op-amps.

Frequency Response of an Op-amp: Introduction to frequency response, compensating networks, frequency response of internally compensated Op-amp, frequency response of non-compensated Op-amp, closed-loop frequency response.

General Applications: DC & AC Amplifiers, peaking amplifier, summing, scaling and averaging amplifier, instrumentation amplifier, integrator, differentiator, log and antilog amplifiers, comparator, zero-crossing detector, Schmitt trigger, sample-and-hold circuit, clippers and clampers.

Active Filters and Oscillators: Butterworth filters, band-pass filters, band-reject filters, all-pass filters, phase shift oscillator, Wien-bridge Oscillator, voltage-controlled oscillator (VCO), square wave generator.

Specialized IC Applications: Introduction, 555 timer circuit, mono-stable and a stable multi-vibrator using IC 555, phase-locked loop (PLL), voltage regulators.

Laboratory Work :

Inverting and non-inverting characteristics of an Op-amp measurement of Op-amp parameters, Op-amp as an integrator & differentiator, comparator, Schmitt trigger, converters (ADC, DAC), square wave generator, saw-tooth waveform generator, precision half wave and full wave rectifiers, log-antilog amplifier, 555 as an a-stable, mono-stable and bi-stable multi-vibrators, active filters.

Course Learning Objectives (CLO)

The students will be able to:

1. Analyse differential amplifier and its configurations.
2. Explain various op-amp parameters and configurations.
3. Analyse frequency response of op-amps
4. Design various applications using op-amps
5. Implement circuits using Linear IC (555)

Text Books:

1. Ramakant A. Gayakwad, 'OP-AMP and Linear IC's', Prentice Hal, 1999.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

2. Sergio Franco, 'Design with operational amplifiers and analog integrated circuits', McGraw-Hill, 2002.

Reference Books:

1. D. Roy Choudhry, Shail Jain, "Linear Integrated Circuits", New Age International Pvt. Ltd., 2000.
2. J. Michael Jacob, 'Applications and Design with Analog Integrated Circuits', Prentice Hall of India, 2002.

UEC714: FIBER OPTIC COMMUNICATION

L	T	P	Cr
2	0	2	3.0

Course Objectives: To understand fiber optic communication system, transmitter section, medium- the optical fiber, receiver section, analyze system based on important parameters for characterizing optical fiber, optical source, detector and amplifier, fundamentals and advances in lasers, LEDs, photodiodes.

Optical Fibers and Their Characteristics: Introduction to high frequency communication, nature of light, advantages of optical communication, fiber structures, wave guiding, basic optical laws and definitions, optical fiber modes and configuration, mode theory for circular waveguides, single mode fibers, graded index fiber, fiber materials, fabrication and mechanical properties, fiber optic cables; joints, splices, connectors, attenuation, signal distortion, dispersion and polarization mode dispersion in optical fibers, mode coupling, design optimization of single mode fibers.

Optical Sources and Amplifiers: Light emitting diodes, semiconductor laser, various configurations of semiconductor laser, performance parameters of LEDs and semiconductor lasers, light source linearity, modal partition and reflection noise, reliability consideration; power launching and coupling, optical amplifiers: erbium doped fiber amplifier, semiconductor optical amplifier, Raman amplifier.

Photodetectors: Operating principle and physical properties of photodiodes, pin and avalanche photodiodes, photodetector noise, response time, avalanche multiplication noise, temperature effect on avalanche gain, photodiode material.

Optical Communication Systems: Optical receiver operation- fundamental receiver operation, digital receiver performance calculation, preamplifier types, analog receivers. digital transmission systems- point to point links, line coding, noise effects on system performance. analog system: overview of analog links, carrier to noise ratio, multichannel transmission techniques, WDM: basics and components, LAN, coherent optical fiber communication- classification of coherent system, requirements on semiconductor lasers, modulation techniques.

Familiarization with standards: *IEEE 404-1977, IEEE 812-1984, ITU G.651-G.657, ANSI Z136.2.*

LABORATORY WORK: Basic optical communication link experiments (analog & digital), measurement of numerical aperture, splicing, multiplexing experiments, bending losses, measurement with OTDR, design and performance analysis using simulation tools.

Course Learning Outcomes (CLOs):

The students will be able to:

1. Identify and formulate the types, basic properties and transmission characteristics of optical fibers.
2. Analyse different types of optical sources and amplifiers for efficient optical fiber communication.
3. Analyse and formulate pin and avalanche photodetectors in optical fiber communication systems.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

4. Realize the analog and digital fiber optic communication systems and networks with different modulation techniques.

Test Books:

1. Keiser, Gred, Optical Fiber Communications, Tata McGraw-Hill, (2013) 5th ed.
2. Senior, John M., and Yousif Jamro, M., Optical fiber communications: principles and practice, Prentice Hall, (2009) 3rd ed.

Reference Books:

1. Ajoy Kumar Ghatak and K. Thyagarajan, Optical Electronics, Cambridge University Press (2012) 2nded.
2. Bahaa E. A. Saleh, Malvin C. Teich, Fundamentals of Photonics, John Wiley & Sons, (2019) 3rd ed.

UEC537: DIGITAL IMAGE PROCESSING

L	T	P	Cr
2	0	2	3.0

Course Objective:

To introduce the concepts of image processing and basic analytical methods to be used in image processing. To familiarize students with image enhancement and restoration techniques, to explain different image compression techniques. To introduce segmentation and morphological processing techniques.

Introduction: Fundamentals of Image formation, components of image processing system, image sampling and quantization

Image transforms: Discrete Fourier transforms, Discrete cosine transform, sine transform, Hadamard transform, Haar transform, Slant transform, KL transform, wavelet transform

Image enhancement in the spatial domain: Basic grey level transformation, histogram processing, arithmetic and logic operators, basic spatial filtering, smoothing and sharpening spatial filters

Image restoration: A model of the image degradation/restoration process, noise models, restoration in the presence of noise—only spatial filtering, Wiener filtering, constrained least squares filtering, geometric transforms; Introduction to the image enhance in frequency domain

Image Compression: Need of image compression, image compression models, error-free compression, lossy predictive coding, image compression standards

Morphological Image Processing: Preliminaries, dilation, erosion, open and closing, basic morphological algorithms, The Hit-or-Miss Transformation

Image Segmentation: Detection of discontinuous, edge linking and boundary detection, thresholding, Hough Transform Line Detection and Linking, region-based segmentation.

Object Recognition: Patterns and patterns classes, matching, classifiers.

Laboratory Work :

Demonstrate the use of Image Processing Toolbox on MATLAB to create interactive image processing applications like image enhancement, image compression, image segmentation, feature extraction, image classification.

Course Learning Objectives (CLO)

The students will be able to:

1. Demonstrate various image transformation techniques
2. Apply image enhancement techniques in spatial and frequency domain.
3. Analyze the mathematical modeling of image restoration and compression
4. Apply the concept of image segmentation and object recognition.

Text Books

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

1. N Digital Image Processing, Rafeal C. Gonzalez, Richard E. Woods, Second Edition, Pearson Education/PHI
2. Fundamentals of Neural Networks: Architectures, Algorithms And Applications, Laurene V. Fausett, 1st Edition, 1993

Reference Books

1. Image Processing, Analysis, and Machine Vision, Milan Sonka, Vaclav Hlavac, Roger Boyle, CL Engineering, 3rd Edition
2. Handbook of Face Recognition, Li, Stan Z., Jain, Anil, Springer, 2011
3. Frontiers in Pattern Recognition and Artificial Intelligence

UEC538: ALGORITHM ANALYSIS AND DESIGN

L	T	P	Cr
2	0	2	3.0

Course Objective:

To learn the representation of data in ways that allows its access efficiently, and analyzes the efficiency of algorithms.

Fundamentals: Review of asymptotic, Review of basic data structures, Review of basic algorithms

Sorting and searching: Review of classical sorting, Interpolation Search, Specialized sorting methods, Deterministic Kth selection, Lower bounds on max & min, Majority detection, Meta algorithms

Advanced data structures: Skip lists, Amortized analysis, Fibonacci heaps.

Graph algorithms: Lowest common ancestor, Minimum spanning trees, Shortest paths trees, Radius-cost tradeoffs, Steiner trees, Minimum matchings, Network flows, Degree-constrained trees

Numerical algorithms: Linear programming, Matrix multiplication, Karatsuba's algorithm

Distributed algorithms: Distributed models, Asynchronous consensus impossibility, Leader election in a ring, Leader election in graphs, Distributed MSTs

Topology and Geometric algorithms: Geometric Graphs, Surface, Homology, Plane-Sweep, Delaunay Triangulations, Alpha Shapes

String matching: Naive string matching algorithm, Knuth-Morris-Pratt Algorithm, Boyer-Moore Algorithm.

NP-completeness: Polynomial-time and intractability, Space and time complexity, Problem reductions, NP-completeness of satisfiability, Independent sets, Graph colorability, Travelling salesperson problem, Approximation heuristics.

Laboratory Work :

Implementation of various advanced algorithms to solve real-time problems. Mini/Major projects to solve social needs.

Course Learning Objectives (CLO)

The students will be able to:

1. Implement different sorting and searching algorithm.
2. Implement graph and numerical algorithms.
3. Implement distributed and geometric algorithms.
4. Understand and implement String matching.
5. Understand NP-completeness.

Text Books

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UNC514: DATA SCIENCE FUNDAMENTALS

L	T	P	Cr
2	0	2	3.0

Course Objective:

To elaborate the basics of data science and provide a foundation for understanding the challenges and applications.

Introduction to Python: Basic syntax, variables, Operators (Arithmetic Operators, Bitwise Operators, Assignment Operators, Comparison Operator, Logical Operators, Identity Operators, Membership Operators), Data types (Numbers, Booleans, Strings), Control Flow (if-else, for loop, while loop, break/continue), Sequence Generation (range function), String Operations (length, upper/lower, formatting, sub string, indexing, comparison, strip, split, count, search), Random Numbers, Functions.

Data Structures in Python: List, Tuple, Sets, Dictionary, Operations on Data Structures (Declarations, Iterations, Adding/deleting element, min/max/sorting, merge, select).

More of Python: Exception Handling, Command Line Arguments, Use of Libraries, File Handling (Read, Write, Merge, etc).

OOPs in Python: Classes, Objects, Inheritance, Create and upload packages on pypi.org.

Advance Topics in Python: Working with Numpy, Working with Scipy.

Plotting and Visualization in Python: Plotting using Matplotlib library (Histogram, Box Plot, Scatter Plot, Bar Graphs, Line Graph, etc)

Basics of Data Science: Handling of CSV files (Read, Write, Update, Transform), Measures of Central Tendency (Mean, Median, and Mode), Measures of Variability (Range, Interquartile Range, Variance, and Standard Deviation),

Visualization: -Traditional Visualization, Multivariate Data Visualization, Principles of Perception, Color, Design, and Evaluation, Text Data Visualization, Network Data Visualization, Temporal Data Visualization and visualization Case Studies

Advances in Data Science: Basics of Correlation, Regression, Working with Pandas, Working Scikit-Learn, Featuring Engineering, Probability and Random Variables, Correlation, Regression, Models for Structured and Unstructured Data, Storage and Retrieval of Structured Data, Predictive Analytics of Structured Data using Python, Big Data and Distributed Databases, Storage and Retrieval of Unstructured Data, The HDFS File System, Basics of Machine Learning (Decision Trees and Neural Networks).

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Laboratory Work

Implementation of various data analytics techniques such as classification clustering on real world problems using Python.

Course Learning Objectives (CLO)

The students will be able to:

1. To analyse the need and usage of analytics and visualization techniques.
2. To implement how to manage, manipulate, cleanse and analyse data.
3. To develop dashboards for real-time data sets.
4. To visualized the dataset using different visualization techniques.
5. To demonstrate the use of Python on real-life problems.

Text Books

1. Jiawei Han, Micheline Kamber, Jian Pei ,Data Mining Concepts and Techniques, (3rd Ed.),Morgan Kaufmann
2. Roger D. Peng R Programming for Data Science

Reference Books

UEC859: INTEGRATED SYSTEM DESIGN

L	T	P	Cr
2	0	2	3.0

Course Objective:

To enhance comprehension capabilities of students through understanding on the use of VHDL and Verilog for the design, synthesis, modeling, and testing of VLSI devices. These are IEEE standards that are used by engineers to efficiently design and analyze complex digital designs.

Syllabus

Basic Digital Circuits: Lexical Elements And data types, program skeleton, structural, dataflow and behavioral descriptions, testbench.

RTL Combinational circuit: Operators, Block statement, Concurrent assignment statements, Modeling with a process, Routing circuit with if and case statements, Constants and Generics

Regular Sequential Circuit: HDL code of Flip flops and Registers, simple design examples, testbench for sequential circuits, case study

FSM: Mealy and Moore FSMs, Design Examples

Synthesis: Register Transfer level description, Timing and Clock Constraints, technology libraries, Translation, Boolean optimization, Factoring, Mapping to gates

Xilinx FPGA Implementation Memory: Method to incorporate memory modules, HDL templates for memory interface.

Familiarization with standards: IEEE 1164-1993, IEEE 1076-2019.

Laboratory Work :

Modeling and simulation of all VHDL and Verilog constructs using ModelSim, their testing by modeling and simulating test benches, Logic Synthesis using FPGA Advantage, Mapping on FPGA Boards.

Micro Project: Design & Simulate a digital system in VHDL or Verilog and its implementation FPGA board.

Course Learning Objectives (CLO)

The students will be able to:

1. Model and verify digital systems in HDL
2. Design and test finite state machines
3. Explain the FPGA architectures
4. Synthesize various digital designs on FPGA

Text Books

1. Bhaskar, J., A VHDL Primer, Pearson Education/ Prentice Hall (2006)3rd Ed.
2. Palnitkar, Samir, Verilog HDL, Prentice Hall, 2nd Edition,

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Reference Books

2. Donald E. Thomas, Philip R. Moorby, Donald B. Thomas, The Verilog HDL, Kluwer Academic Publication, 5th Edition, 2002,
3. Chu Pong P., FPGA Prototyping by VHDL / Verilog Examples, Wiley (2008)

UEC521: DESIGN USING SYSTEM VERILOG

L	T	P	Cr
2	0	2	3.0

Course Objective: The objective of this course is to provide methods and techniques to design and verify the functionality of digital electronic systems using System Verilog.

Syllabus

Data types: Built-in data types, fixed-size arrays, dynamic arrays, queues, associative arrays, array methods, creating new types with typedef, creating user-defined structures, enumerated types, constants, strings.

Design of Combinational and Sequential Circuits: HDL modelling of combinational and sequential circuits: multiplexer, decoder, adder, flip flops and registers, simple design examples, testbench for combinational and sequential circuits. Mealy and Moore FSMs, Design Examples.

Procedural statements and routines: procedural statements, tasks, functions, and void functions, routine arguments.

Connecting the test bench and design: Separating the test bench and design, the interface construct, stimulus timing, interface driving and sampling, program – module interactions, system Verilog assertions.

Basic OOP: Introduction, OOP terminology, creating objects, object deallocation, static variables vs. global variables, class methods, defining methods outside of the class, using one class inside another, understanding dynamic objects, copying objects, public vs. local, building a layered test bench.

Randomization: Randomization in System Verilog, Constraint, solution probabilities, controlling multiple constraint blocks, pre_randomize and post_randomize functions, random number functions, constraints tips and techniques, common randomization problems, iterative and array constraints.

Threads and interprocess communication: Threads, disabling threads, interprocess communication, events, semaphores, mailboxes and building a test bench with threads & interprocess communication (IPC).

Familiarization with standards: IEEE 1364-2005, IEEE 1800-2017.

Laboratory Work: Modelling and simulation of digital blocks, their verification by using System Verilog.

Course Learning Objectives (CLO)

The students will be able to:

1. Illustrate different data types used in System Verilog.
2. Design and test the functionality of digital system.
3. Apply the concepts of object oriented programming in System Verilog.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

4. Apply randomization methods in System Verilog.

Text Books

1. Chris Spear, SystemVerilog for Verification A Guide to Learning the Testbench Language Features, Springer, (2008) 2nd Ed.
2. Stuart Sutherland, Simon Davidmann and Peter Flake, SystemVerilog for Design Second Edition: A Guide to Using SystemVerilog for Hardware Design and Modeling, Springer (2006); 2nd ed.

ELECTIVE - II

UEC619: ELECTROMAGNETIC FIELD THEORY AND TRANSMISSION LINES

L	T	P	Cr
3	0	0	3

Course Objective: To enhance student's comprehensive capabilities in electromagnetic field theory by studying the behaviour of static and time varying electric and magnetic fields in a medium and transmission line.

Syllabus

Vector Analysis: Coordinate system: Cartesian, Cylindrical and spherical coordinate systems, Vector algebra: dot product, cross product, gradient, divergence and curl.

Electrostatic fields: Introduction to coulomb's law, Gaussian law and its applications in determination of field of spherical and cylindrical geometries, Laplace's and Poisson's equation in various coordinate systems. Boundary conditions at electric interfaces, Method of images and its applications.

Magnetostatics: Introduction to ampere's law, Magnetic vector potential, Magnetic forces, Boundary conditions at magnetic interfaces.

Time Varying Fields and Maxwell's Equations: Maxwell's equation in integral and differential form: For static and time varying fields, For free space, For good conductors, For harmonically varying fields, Continuity of charge, Concept of displacement current.

Electromagnetic wave propagation: Waves in General, Wave Propagation in Lossy Dielectrics, Plane Waves in Free Space, Plane Waves in Good Conductors, Wave Polarization, Poynting theorem and power flow: Energy stored and radiated power, Reflection of a Plane Wave at Normal Incidence/Oblique Incidence

Transmission Lines and Matching Networks: Introduction, Transmission Line Parameters, Transmission Line Equations, Input Impedance, Characteristic impedance, Standing Wave Ratio, and Power, The Smith Chart, transmission line as circuit and matching elements (quarter wave, single stub and double stub)

Guided waves: Waves between parallel plates, transverse electric waves and magnetic waves, characteristics of TE and TM waves, TEM waves, velocity of propagation, Characteristic impedance at radio frequencies, Propagation constant, Attenuation constant and phase constant

Familiarization with standards: IEEE 148-1959, IEEE 1128-1998 and IEEE 1302-1998.

Laboratory Work: NA

Course Learning Objectives (CLO)

The students will be able to:

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

1. Apply the concepts of co-ordinate systems and vector calculus.
2. Analyze the concepts of static electric and magnetic fields.
3. Analyze Maxwell's equations in various forms and apply those to engineering problems, while examining wave propagation phenomena across different media and interfaces.
4. Analyze the concepts of basic transmission media.

Text Books

2. Kraus, J.D., Electromagnetics, McGraw., 8th ed.

Reference Books

1. Sadiku, M.N.O, Elements of Electromagnetics, Oxford University Press (2009) 4th ed.

UEC631: Wireless and Mobile Networking

L	T	P	Cr
3	0	0	3.0

Course Objective: This course will cover state-of-the-art topics in wireless networking and mobile computing. The objective of the course is to introduce students to recent advances in mobile networking and sensing, with an emphasis on practical design aspects of mobile systems.

Introduction to Wireless Communication Systems: History of Wireless Communication and Future Trends, Narrowband, Wideband, Ultra-Wideband Communication Systems, Description of 2G, 3G, 4G and Hybrid Communication Systems, Brief Introduction of Digital Modulation Techniques, Wireless channel impairments and mitigation techniques, Cognitive radio self-organising networks and spectrum sharing

Cellular Concepts and System Design Fundamentals: Introduction to Cellular Concepts and Cellular System Design Fundamentals, Frequency Reuse, Cell size: Merits and demerits Channel Assignment Strategies, Handoff Strategies, Interference and System Capacity, Trunking and Grade of Service, Cell Splitting, Sectoring, Repeaters and Microcell Zone Concepts.

Mobile architectures: Convergence of mobile and fixed architectures: backhaul, fronthaul, midhaul and protocol convergence, LTE, LTE-A, LTE-A-PRO, Introduction to 5G, 5G Architecture, 5G Mobile Edge Computing, FOG computing, 5G Radio Access Technologies, Concept of New Radio (NR), mmWave Propagation, Principles of MIMO systems, Massive MIMO, Distributed MIMO, Programmability and Softwarization, Network Function Virtualization, (NFV), Software Defined networking (SDN), Role of NFV and SDN in 5G, 5G and Internet of Things

Wireless local area networks: IEEE: 802.11, 802.11a, 802.11b, 802.11g, 802.11n, HetNet and small cell deployments, Network Coding, Network Security, Optical networks for backbone, Visible Light communication

Future mobile networks: Drone networking, Multi-UAV networks, architectures and civilian applications, Communication challenges and protocols for micro UAVs, Connected and autonomous cars, Wireless technologies for Vehicle-to-Infrastructure (V2I) and Vehicle-to-Vehicle (V2V) communications, Automotive surrounding sensing with GHz and THz signals

Course Learning Outcomes: After completion of this course, the students will be able to:

1. Understand the structure of current 4G cellular networks (including LTE) and the requirements of 5G cellular networks
2. Analyze the performance of IEEE 802.11 Wi-Fi.
3. Evaluate the basic foundations of wide variety of common wireless networking standards
4. Describe modern network architecture paradigms.

Text Books:

1. Wireless Communications: Principles and Practice, by Theodore S. Rappaport, Prentice Hall.
2. Wireless Networking Complete, by Pei Zheng et al., Morgan Kaufman

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Reference Books:

1. 802.11n: A Survival Guide, by Matthew Gast, O'Reilly Media.
2. 802.11ac: A Survival Guide, by Matthew Gast, O'Reilly Media.
4. Wireless Networking Complete, by Pei Zheng et al., Morgan Kaufmann.

UEC633: CRYPTOGRAPHY

L T P Cr

2 0 2 3.0

Course Objective: This course is designed to impart a critical theoretical and detailed practical knowledge of cryptographic algorithms and techniques. To recognize typical vulnerabilities and safeguards used for wireless communication.

Syllabus break-up:

Basic of Cryptography: Symmetric and asymmetric cryptography, cryptographic hash functions, Authenticated encryption, IP Security, Encapsulating security payloads, Key generation and distribution, Key management, Message Authentication Codes (MACs), Message integrity, Wireless Hacking and Hackers.

Symmetric cryptography: Stream and blockciphers - Modern Block Ciphers: Block ciphers principals, Introduction to DES, TDES and AES algorithms, Blowfish and Twofish.

Public key cryptography: Introduction to Diffie-Hellman, RSA, ECC, ElGamal and DSA.

Digital signatures: How to sign using RSA, Hash based signatures, certificates, certificate transparency, certificate revocation.

Security Vulnerabilities: security against active attacks, Attacks under Message Indistinguishability (Chosen Plaintext Attack and Chosen Ciphertext Attacks), middle channel and side channel attacks, Access Control Problems, Spoofing and Sniffing attacks, Social Engineering and countermeasures.

Wireless Network Security: IEEE 802.11i Wireless LAN Security, Wireless Application Protocol Overview, Wireless Transport Layer Security, WAP End-to-End Security.

Laboratory Work: Write program to send data across systems as two variants clear text data and encrypted data with different set of encryption algorithms, Showcase different set of security protocol implementation of Wireless LAN.

Course Learning Outcomes (CLO):

The student will be able to:

1. Implement various cryptographic algorithms to protect the confidential data.
2. Identify network vulnerabilities and apply various security mechanisms to protect networks from security attacks.
3. Apply security tools to locate and fix security leaks in a computer network/software.
4. Implement a secure environment for wireless networks

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Text Books:

1. Stallings, W., Network Security Essentials, Prentice Hall (2017) 6th Edition.
2. Cheswick, R., W., Bellovin, M., S., and Rubin, D., A., Firewalls and Internet Security, Addison-Wesley Professional (2003) 2nd Edition.

2. Stallings, W., Cryptography and Network Security, Prentice Hall (2013), 6th Edition.
3. V K Pachghare: Cryptography and Information Security, (2015) PHI 2nd Edition.

UNC512: AUGMENTED AND VIRTUAL REALITY

L	T	P	Cr
2	0	2	3.0

Course Objective:

To understand the basic concepts of Augmented and Virtual Reality. The student must be able to apply the various concepts of Augmented and Virtual Reality in other application areas.

Syllabus

Introduction of Virtual Reality: Fundamental concept and components of Virtual Reality, primary features and present development on Virtual Reality

Multiple Modals of Input and Output Interface in Virtual Reality: Input -- Tracker, Sensor, Digital Glove, Movement Capture, Video-based Input, 3D Menus & 3DScanner etc. Output -- Visual /Auditory / Haptic Devices

Visual Computation in Virtual Reality: Fundamentals of computer graphics, software and hardware technology on stereoscopic display, advanced techniques in CG: Management of large scale environments & real time rendering

Environment Modeling in Virtual Reality: Geometric Modeling, Behavior Simulation, Physically Based Simulation.

Interactive Techniques in Virtual Reality: Body Track, Hand Gesture, 3D Menus, Object Grasp.

Introduction of Augmented Reality (AR): System structure of Augmented Reality, key technology in AR.

Development Tools and Frameworks in Virtual Reality: Frameworks of software development tools in VR, X3D Standard, Vega, MultiGen, Virtools etc. Application of VR in Digital Entertainment: VR technology in film & TV production, VR technology in physical exercises and games, demonstration of digital entertainment by VR.

Laboratory Work:

To implement various techniques studied during course.

Course Learning Objectives (CLO)

The students will be able to:

1. Analyze the components of AR and VR systems, its current and upcoming trends, types, platforms, and devices.
2. Compare technologies in the context of AR and VR systems design.
3. Implement various techniques and algorithms used to solve complex computing problems in AR and VR systems.
4. Develop interactive augmented reality applications for PC and Mobile based devices using a variety of input devices.
5. Demonstrate the knowledge of the research literature in augmented reality for both

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

compositing and interactive applications.

UEC707 : NETWORK VIRTUALIZATION AND SOFTWARE DEFINED NETWORKING

L	T	P	Cr
2	0	2	3.0

Course Objective:

To have a deep understanding of two important, emerging network technologies: Software Defined Networking (SDN) and Network Functions Virtualization (NFV). Use SDN emulator (Mininet) to set up and test network topologies.

Software Defined Network: History of programmable networks and Evolution of Software Defined Networking (SDN), IETF Forces, Active Networking. Separation of Control and Data Plane - Concepts, Advantages and Disadvantages, OpenFlow, protocol, 4D network architecture. Traditional Networking versus SDN.

Control & Data Plane: Overview, distributed and centralized control plane & data plane. Control plane: Existing SDN Controllers including Floodlight and Open Daylight projects. Customization of Control Plane: Switching and Firewall.
Data Plane: Software-based and Hardware-based; Programmable Network Hardware.

Network Virtualization: Concepts, Applications, Existing Network Virtualization Framework (VMWare and others), Network Functions Virtualization (NFV) and Software Defined Networks: Concepts, Implementation and Applications.

Network Programmability: Introduction, Northbound Application Programming Interface, Current Languages and Tools.

Data Center Networks: Packet, Optical and Wireless Architectures Network Topologies

Use Cases of SDNs: Data Centers, Internet Exchange Points, Backbone Networks, Home Networks, Traffic Engineering.

Laboratory Work (if applicable)

1. Set up and get familiar with SDN emulator – Mininet and set up a virtual network.
2. Basic mininet operations.
3. Manually control the switch.
4. Move the rules to SDN controller.
5. Set different forwarding rules for each switch in the controller.

Course Learning Objectives (CLO)

The students will be able to:

1. Analyze the SDN architecture and advantages of programmable networks over traditional networks.
2. Analyse the impact of decoupled control plane and data plane on network.
3. Identify network virtualization components and their applications.
4. Design and implement networking problems using SDN-friendly network emulator.

Text Books

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UEC634 : CLOUD COMPUTING TECHNOLOGY

L	T	P	Cr
2	0	2	3.0

Course Objective:

To appreciate the benefits of Cloud computing and apply Cloud paradigms for evolving businesses. To familiarize with cloud architectural models and resource allocation strategies. The student should comprehensively be exposed to Cloud based services.

Introduction: Basics of the emerging Cloud computing paradigm, Cloud computing history and evolution, Cloud enabling technologies, practical applications of Cloud computing for various industries, the economics and benefits of Cloud computing.

Cloud Computing Architecture: Cloud Architecture model, Types of Clouds: Public private & Hybrid Clouds, Resource management and scheduling, QoS (Quality of Service) and Resource Allocation, Clustering.

Cloud Computing delivery Models: Cloud based services: IaaS, PaaS and SaaS
Infrastructure as a Service (IaaS): Introduction to IaaS, Resource Virtualization i.e. Server, Storage and Network virtualization
Platform as a Service (PaaS): Introduction to PaaS, Cloud platform & Management of Computation and Storage, Azure, Hadoop, and Google App.
Software as a Service (SaaS): Introduction to SaaS, Cloud Services, Web services, Web 2.0, Web OS Case studies related to IaaS, PaaS and SaaS.

Data Processing in Cloud: Introduction to Map Reduce for Simplified data processing on Large clusters, Design of data applications based on Map Reduce in Apache Hadoop

Advanced Technologies: Advanced web technologies (AJAX and Mashup), distributed computing models and technologies (Hadoop and MapReduce), Introduction to Open Source Clouds like Virtual Computing Lab (Apache VCL), Eucalyptus

Cloud Issues and Challenges: Cloud computing issues and challenges like Cloud provider Lock-in, Security etc.

Laboratory Work :

Cloud Service creation, deploying, resource sharing, and security using AWS Academy resources

Course Learning Objectives (CLO)

The students will be able to:

1. Identify Cloud architectures and Cloud based services.
2. Analyze economic impact of implementing cloud computing technologies
3. Applying data processing and clustering algorithms in cloud
4. Evaluate security issues in the Cloud environment.
5. Implement cloud based services

Text Books

UEC638: VLSI Testing and Verification

L	T	P	Cr
2	0	2	3.0

Course Objective: In this course, students will learn test economics, fault modelling, logic and fault simulation, SCOAP measures, ATPG concepts for combinational and sequential circuits. Students will also be able to write test bench for the complex VLSI design.

Syllabus

Introduction: Role of testing in VLSI design, Issues in test and verification of complex chips, VLSI test process and equipment, Test economics, Yield analysis and product quality.

Faults modelling and fault simulation: Physical faults and their modelling, Stuck-at faults, Bridging faults, Fault collapsing, Fault simulation, Deductive, Parallel and Concurrent fault simulation, Combinational and sequential SCOAP measures.

ATPG for combinational circuits: D-Algorithm, Boolean Difference, PODEM, Random, Exhaustive and Weighted Test Pattern Generation.

ATPG for sequential circuits: ATPG for Single-Clock Synchronous Circuits, Time frame expansion Method.

Memory testing and BIST: Permanent, Intermittent and pattern-sensitive faults, March test notion, Memory testing using March tests, PLA testing, Ad-Hoc DFT methods, Scan design, Partial scan design, Random logic for BIST, Memory BIST.

Verification: Design verification techniques based on simulation, Analytical and formal approaches, Functional verification, Timing verification, Formal verification, Basics of equivalence checking and Model checking, Hardware emulation.

Laboratory Work: Familiarization with the development of test benches using Verilog/System Verilog on Mentor/Cadence/Xilinx-ISE tools, Logic simulation, Logic level diagnosis, ATPG, development of Verification plan for the given design and writing testcases, computation of fault-coverage/code coverage index.

Course Learning Objectives (CLO)

The students will be able to:

1. Illustrate fault modelling and collapsing.
2. Make use of combinational and sequential Automatic Test Pattern Generation Techniques.
3. Analyze different memory faults and their testing methods.
4. Develop the verification plan and test benches for VLSI designs.

ELECTIVE-III

UEC731: GRAPHICS AND VISUAL COMPUTING

L	T	P	Cr
3	0	0	3.0

Course Objective: Detailed study of computer graphics, 2 D and 3 D transformations, representations and visualization.

Syllabus break-up:

Fundamentals of Computer Graphics: Applications of computer Graphics in various, Video Display Devices, Random scan displays, raster scan displays, DVST, Flat Panel displays, I/O Devices.

Graphics Primitives: Algorithms for drawing Line, circle, ellipse, arcs & sectors, Boundary Fill & Flood Fill algorithm, Color Tables

Transformations & Projections: 2D & 3D Scaling, Translation, rotation, shearing & reflection, Composite transformation, Window to Viewport transformation, Orthographic and Perspective Projections.

Clipping: CohenSutherland, Liang Barsky, Nicholl-Lee-Nicholl Line clipping algorithms, Sutherland Hodgeman, Weiler Atherton Polygon clipping algorithm.

Three Dimensional Object Representations: 3D Modeling transformations, Parallel & Perspective projection, Clipping in 3D. Curved lines & Surfaces, Spline representations, Spline specifications, Bezier Curves & surfaces, B-spline curves & surfaces, Rational splines, Displaying Spline curves & surfaces.

Basic Rendering: Rendering in nature, Polygonal representation, Affine and coordinate system transformations, Visibility and occlusion, depth buffering, Painter's algorithm, ray tracing, forward and backward rendering equations, Phong Shading per pixel per vertex Shading.

Visualization: Visualization of 2D/3D scalar fields: color mapping, iso surfaces. Direct volume data rendering: ray-casting, transfer functions, segmentation. Visualization of: Vector fields and flow data, Time-varying data, High-dimensional data: dimension reduction, parallel coordinates, Non-spatial data: multi-variate, tree/graph structured, text Perceptual and cognitive foundations, Evaluation of visualization methods, Applications of visualization, Basic Animation Techniques like traditional, keyframing.

Course Learning Outcomes (CLO): The student will be able to:

1. Comprehend the concepts related to basics of computer graphics and visualization.
2. Demonstrate various graphics primitives and 2-D, 3-D geometric transformations
3. Understand various clipping techniques
4. Comprehend the concepts related to three dimensional object representations.
5. Implement various hidden surface removal techniques.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UEC635: BLOCKCHAIN TECHNOLOGY

L	T	P	Cr
2	0	2	3.0

Course Objective:

This course covers the conceptual and application aspects of fast growing and latest technology Blockchain. The popularity of digital cryptocurrencies has led the foundation of Blockchain, it is a public digital ledger which share the information in a secure way. The various applications of Blockchain are business process management, smart contracts, IoT and so on. In this course fundamental design and architectural primitives of Blockchain, the system and the security aspects will be covered.

Syllabus break-up:

Introduction to Blockchain: Blockchain Theory, Immutable Ledger, Smart Networks, Cryptographic Wallets, Blockchain Global Peer to peer software network, Cryptocurrency, Bitcoin mining, Bitcoin scalability, Blockchain risks: Technical, Regulatory, Perception, Payment networks, Blockchain applications, Decoupling Decision-making and Automated execution, Smart Contracts: Bitcoin, Ethereum.

Hyperledger Fabric: Transaction flow, details, membership, identity management, hyperledger composer, application development and network administration,

Blockchain use cases: Blockchain Consensus Algorithms, Byzantine Fault Tolerance, Applications in finance, supply chain, other industries and Government.,

Miscellaneous: Alt Coins, Ripple, Neo, Litecoin, Cardano, Stellar, Blockchain security and research aspects.

Laboratory Work: Pre-requisite for basics of Blockchain, Create a blockchain using Python, Create a cryptocurrency using Python, Create a Smart Contract using Python, Implementation and testing of hyperledger, execution and understanding of bitcoin, implementation, concepts and exposure to blockchain using any language. Modelling, designing and testing of application specific project and research papers.

Course Learning Outcomes (CLO):

The student will be able to:

1. Identify the basics of blockchain and its architectures.
2. Know the use of digital currency and consensus algorithms.
3. Implement hyperledger for various real world problems
4. Apply Blockchain technologies in societal, environmental, real world problems.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UEC858: Modern Control Theory

L	T	P	Cr
3	0	0	3.0

Course Objective: This course provides the insight of the fundamentals of modern control theory by analysing time and frequency response of open and closed loop systems. Furthermore, the concept is extended to advanced concepts of modern control theory centered on the system stability and state space methods. Emphasis is placed on concepts of controllability and observability in addition to fundamentals of digital control systems.

Syllabus break-up:

Mathematical Models, Block Diagrams and Signal Flow Graphs of Systems: Introduction of mathematical models and transfer function, Construction and reduction of block diagram and signal flow graphs, Application of Mason's gain formula.

Time-Domain Analysis of Control Systems: Transient and steady state response, time response of first and second-order systems, sensitivity to parameter variations, steady-state errors, Types of Systems and Error Constants.

System Stability: Conditions for stability of linear systems, Algebraic Stability criteria - Hurwitz criterion, Routh criterion, Root locus techniques, Frequency domain analysis, Correlation between frequency response and transient response, Polar plots, Nyquist plots, Bode plots.

Classical Controller Design Methods: General aspects of the Closed-loop control design problem, Controller circuits design concepts for P, PD, PI and PID Controllers

State Variable Analysis: Introduction, state variable representation, conversion of transfer function model to state variable model, conversion of state variable model to transfer function model, Eigen values and Eigen vectors, solution of state equations. Concepts of controllability and observability,

Digital control system: Basic structure of digital control systems, description and analysis of Linear Time-Invariant Discrete-time systems.

Course Learning Outcomes (CLO):

The student will be able to:

1. Interpret closed-loop and open-loop control system representations using block diagrams and signal flow graphs.
2. Evaluate the time and frequency response of control systems and establish the relationship between them.
3. Analyze the stability of the control systems and learn various methods to judge the stability criterion,
4. Understand the fundamentals of designing of P-I-D controllers,
5. Demonstrate an understanding of state-space analysis concepts, and apply the principles of controllability and observability to both classical and digital control systems.

UEC643: AUDIO AND VIDEO PROCESSING

L	T	P	Cr
2	0	2	3

Course Objective: To provide students with the knowledge of basic characteristics of speech and video signal. To describe basic algorithms of speech analysis common to many applications. To make students acquainted with state-of-the-art video processing techniques, their technical details and challenges.

Syllabus

Part A

Introduction: Introduction to speech processing, Characteristics of speech signals, Digitization of speech signal.

Digital Models for Speech signals: Human Speech production, Acoustic Phonetics. Uniform Tube Modeling of Speech Production.

Speech Recognition: Automatic speech recognition system, architecture, features extraction, effect of windowing, spectrogram, cepstral analysis, Hidden Markov Models (HMM), Viterbi algorithm, Vector Quantization (VQ).

Speaker recognition: Speaker verification/authentication vs. speaker identification, Automatic Speaker Verification system, pattern matching (e.g. dynamic time warping (DTW), VQ, HMM).

Part B

Introduction: Video formats, Capturing of video signals, Color space, Quality

Video Motion Estimation: general methodologies-Block matching algorithm, Deformable blocks matching algorithm, Region based motion estimation, Multi-resolution motion estimation.

Video Coding: Transform and Quantization, Content dependent video coding, Region based video coding, Object based video coding, Knowledge based video coding, Semantic video coding, Scalable Video Coding.

Video Compression: inter-frame and intra-frame compression, Lossy and Loss less compression techniques, 3D video compression standard (H.264).

Familiarization with standards: IEEE 1857-2013, IEEE 1857.5-2015, IEEE H.264/AVC video coding standard.

Laboratory Work: Students have to write MATLAB /Python programs to gain basic understanding of speech signal, to apply the fundamental concepts of signal processing on speech signals, extraction of fundamental frequency, dividing raw video into frames, compression, coding and reframing the video.

Course Learning Objectives (CLO)

The students will be able to:

1. Model speech signals and represent them digitally.
2. Analyze speech and speaker recognition systems
3. Explain video formats, color spaces and compression techniques.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

4. Implement algorithms for video motion estimation and coding.

UEC 732: NATURAL LANGUAGE PROCESSING AND APPLICATIONS

L	T	P	Cr
2	0	2	3.0

Course Objective: To familiarize the students with natural language processing (NLP) and introduce major algorithms pertaining to real world problems. Students will be able to design and implement machine learning solutions to NLP problems; and be able to evaluate and interpret the results of the algorithms.

Preliminaries: Historical overview of Natural Language Processing, Ambiguity and uncertainty in language, Regular languages and their limitations, Expressions for identifying and quantifying language phenomena, Basic morphology, The Turing test, Chomsky hierarchy, Finite-state automata.

Sequences, similarity and distance metrics: Dynamic programming for optimal alignment of sequences, String edit operations, Edit distance, and examples of use in spelling correction, and machine translation, Decision tree based algorithms in NLP.

Context Free Grammars and Parsing: Constituency, CFG definition, use and limitations. Chomsky Normal Form. Top-down parsing, bottom-up parsing, and the limitations of each, Non-probabilistic Parsing, Efficient CFG parsing, Probabilistic parsing, Events and counting, Joint and conditional probability, Marginals, Independence, Bayes rule, Combining evidence, Examples of applications in natural language, Entropy, cross-entropy, information gain and their application to some language phenomena

Language modeling and Naive Bayes: Markov models, N-grams. Estimating the probability of a word, and smoothing. Generative models of language and their application to building an automatically-trained email spam filter, and automatically determining the language (English, Hindi etc.).

Deep Learning for NLP: Natural Language Processing (NLP) using deep nets, Auto encoders, LSTM networks for NLP applications, Sentiment analysis, Context analysis, Word embedding with recurrent nets, Recurrent neural networks for parts-of-speech tagging, implementation of word2vec, CBOW method in word2vec, Skip-gram method in word2vec, Negative sampling optimization in word2vec, Understand and implement, GloVe using gradient descent and alternating least squares.

Laboratory Work:

1. Obtain pre trained word vectors from GloVe and word2vec.
2. Text classification using word2vec and GloVe.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

3. Text classification using bigram models.
4. Implementing a neural network bigram model.
5. Tensorflow/Theano Basics.
6. word2vec Tensorflow/Theano implementation.
7. Parts-of-Speech Tagging Recurrent Neural Network in Theano/Tensorflow.
8. Named Entity Recognition RNN in Theano/Tensorflow.

Course Learning Outcomes (CLOs): At the end of the course the student will be able to

1. Explain nuances of linguistics and morphology and its computational underpinnings.
2. Implement probabilistic/non probabilistic parsing for a given sequence of words/speech.
3. Apply probabilistic language modeling for automatic identification.
4. Analyze deep networks and sequence models for semantics, context, and sentiment analysis.

Text Books:

1. Jurafsky & Martin "Speech and Language Processing" Pearson Education India; 2 edition (2013) ISBN-10: 9789332518414

Reference Book:

UEC733: AUDIO & SPEECH PROCESSING

L	T	P	Cr
3	0	0	3.0

Course objective: To provide students with the knowledge of basic characteristics of speech signal in relation to production and hearing of speech by humans, to describe some basic algorithms of speech analysis in different applications, to give an overview of various applications (recognition, synthesis, coding) and to inform about practical aspects of speech algorithms implementation.

Digital speech processing and its applications: production and classification of speech sounds, lossless tube models, digital models for speech signals; Analysis and synthesis of pole-zero speech models, Levinson recursion, lattice synthesis filter.

Time dependent processing of speech: pitch period estimation, frequency domain pitch estimation; Discrete-time short-time Fourier transform and its application, phase vocoder, channel vocoder.

Homomorphic speech processing: waveform coders, hybrid coders and vector quantization of speech; Model based coding: Linear predictive, RELP, MELP, CELP; Speech synthesis.

Principles of speech recognition: spectral distance measures, dynamic time warping, word recognition using phoneme units, hidden Markov models and word recognition, speech recognition systems, speaker recognition.

Audio coders: Ear physiology, psychoacoustics, perception model and auditory system as filter bank; Filter bank design and modified discrete cosine transform algorithm for audio compression in MP3 and AAC coders; Standards for high-fidelity audio coding.

Filter banks for speech processing: Tree-structured filter banks, multicomplementary filter banks; Properties of wavelets and scaling functions, wavelet transform; Filter banks and wavelets, applications of wavelet signal processing in audio and speech coding.

Course Learning Outcomes (CLO): Upon completion of the course, the student will be able to:

1. Characterize the speech signal in relation to production and hearing by humans.
2. Differentiate between various mathematical techniques for speech recognition.
3. Analyze coders for speech signals.
4. Analyze the role of filter banks in speech processing.

Text Books:

1. L. R. Rabiner and R. W. Schaffer, "Digital Processing of Speech signals", Prentice Hall, 2010.
2. B. Gold and N. Morgan, "Speech and Audio Signal Processing", John Wiley and Sons Inc., 2011.

UNC631: AI Applications – NLP, Computer Vision, IoT

L	T	P	Cr
2	0	2	3

Course Objectives: There have been many recent advances in the field of Artificial Intelligence. The objective of the course is to provide exposure to these advances and facilitate in depth discussion on chosen topics.

Introduction to Artificial Intelligence: Introducing AI and its importance in transforming human life, Canonical architecture of an AI system, AI systems in practice, Machine Learning basics, Five tribes of Machine Learning, Selection of Machine Learning method, Machine learning applications in sales, marketing and information security.

Fundamentals of Natural Language Processing and its applications: What is NLP, Difficulties in NLP, Basics of text processing and spelling correction, Introduction to language modeling, Application of NLP in sentiment analysis.

Fundamentals of Computer Vision and its applications: Introduction and goal of computer vision, Basics of image processing and formation, Convolutional neural network, Application of computer vision in face recognition.

Artificial Intelligence and IoT: Basic architecture of an IoT system, Role of AI in IoT, Blockchain and AI for an Intelligent IoT system, Applications in Smart City and Smart Energy Grids.

Ethics of AI and AI systems: Robustness and transparency, data bias and fairness, accountability, privacy and Human-AI interaction.

Laboratory Work: To implement models and use cases using python and google open source library Tensorflow.

Course Learning Outcomes (CLOs)

After the completion of the course, the student will be able to:

1. Apply the basic principles, models, and algorithms of AI to recognize, model, and solve problems.
2. Demonstrate awareness and a fundamental understanding of various applications of AI techniques.
3. Comprehend the advancements in machine learning techniques.
4. Acquire knowledge to apply open source libraries for solving real life problems.

Reference Books:

1. Artificial Intelligence: A Modern Approach, by Stuart Russell and Peter Norvig, Pearson.
2. Artificial Intelligence theory and practice, by T. Dean, J. Allen & Y. Aloimonos, New York: Benjamin Cummings (1995).
3. Speech and Language Processing, by M. Jurafsky, & J. Martin, New York: Prentice-Hall (2000).
4. Computer Vision: Algorithms and Applications, by Richard Szeliski, Springer.

UEC644: ANALOG IC DESIGN

L T P Cr
2 0 2 3.0

Course Objective: The goal is to achieve a basic understanding and knowledge of the driving and limiting factors in circuit performance, of circuit design techniques, and of technology issues important to integrated amplifier circuits. To familiarize the design and analysis of basic analog integrated circuits i.e. single ended amplifiers, differential amplifiers, current sources and mirrors, reference circuits, etc. in a standard flow with consideration of performance and power. The course will also familiarize with the issues like noise analysis, OP-Amp design, stability and compensation

Syllabus

Basic MOS Device Physics: MOS IV Characteristics, Second order effects, Short-Channel Effects, MOS Device Models, Review of Small Signal MOS Transistor Models.

Single Stage Amplifiers: Common Source Stage, Source Follower, Common Gate Stage, Cascode, Folded Cascode.

Differential Amplifier: Single ended and Differential Operation, Qualitative and Quantitative Analysis of Differential pair, Common Mode response.

Current Sources and Mirrors: Current Sources, Basic Current Mirrors, Cascode Current Mirrors, Large Signal and Small-Signal analysis.

Frequency Response of Amplifiers: Miller Effect, Association of Poles with nodes, Frequency Response of all single stage amplifiers.

Voltage References: Different Configurations of Voltage References, Major Issues, Supply Independent Biasing, Temperature-Independent References.

Feedback: General Considerations, Topologies, Effect of Loading.

Operational Amplifier: General Considerations, Theory and Design, Performance Parameters, Single-Stage Op Amps, Two-Stage Op Amps, Design of 2-stage MOS Operational Amplifier, Gain Boosting, Comparison of various topologies, slew rate, Offset effects, PSRR.

Stability and Frequency Compensation: General Considerations, Multi-pole systems, Phase Margin, Frequency Compensation, Compensation Techniques.

Familiarization with standard: *IEEE 802.15.4.*

Laboratory Work: Review of Mentor Tools; Analysis of Various Analog Building Blocks such as, Current Sources, Current Mirrors, Differential Amplifier, Output Stages; Design and Analysis of Op-Amp (Closed loop and open loop) and its Characterization, Switched-Capacitor Integrator.

Course Learning Objectives (CLO)

The students will be able to:

1. Utilize the MOS transistor in analog circuits.
2. Analyze and design the single-stage amplifiers.
3. Analyze and design current sources/sinks/mirrors.
4. Analyze the characteristics of OP-AMP.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

1.Text Books

1. Razavi, B., Design of Analog CMOS Integrated Circuits, Tata McGraw Hill (2008).
2. Gregorian, R. and Temes, G.C., Analog MOS Integrated Circuits for Signal Processing, John Wiley (2004).

ELECTIVE-IV

UEC823: SOFT COMPUTING

L	T	P	Cr
2	0	2	3.0

Course objective: To familiarize with soft computing concepts. Introduce the ideas of neural networks, fuzzy logic and use of heuristics based on human experience. Familiarize the concepts of Genetic algorithm. Apply the soft computing concepts to solve practical problems.

Introduction: Introduction to soft computing, Problem complexity, Problem complexity classification, Types of soft computing techniques, Softcomputing versus hard computing, Advantages of soft computing.

Artificial Neural Networks: Biological neuron, Artificial Neural Network, Mathematical Models, McCulloch Neural Model, Perceptron, Adaline and Madaline, Learning & Training in ANN, Hopfield Neural Network, Self-Organizing Networks, Recurrent Networks, Associative memories

Fuzzy Logic System: Crisp Vs Fuzzy set theory, Membership functions, Fuzzy set operations, Fuzzy rules, Mamdani and Sugeno fuzzy inference systems, Defuzzification methods.

Genetic Algorithms: Introduction and biological background of GA, String Encoding of chromosomes, Selection methods, Single & multi-point crossover operation, Mutation, Adjustment of strategy parameters such as Population size, Mutation & Crossover probabilities

Tools & Applications:

Laboratory Work: MATLAB Toolboxes: Fuzzy Logic Toolbox, Neural Network Toolbox, Neural network as a classifier, FLS for Antilock Breaking System (ABS), GA in route planning for Travelling Sales Person, Time-Series forecasting using ANN. Familiarization of GA toolbox MATLAB and implementing it to find optimal solution of optimization problems.

Course Learning Outcomes: Upon completion of this course, the student should be able to:

1. Identify the characteristics of Soft Computing Techniques
2. Analyze neural networks and their applications.
3. Apply fuzzy logic and fuzzy reasoning for decision making
4. Analyze genetic algorithms and their applications.

Text Books

3. John Yen, Reza Langari – Fuzzy Logic Intelligence, Control, and Information
4. Goldberg, Davis E., Genetic Algorithms: Search, Optimization and Machine Learning, Wesley Addison (1989) 3rd ed

UNC741: PARALLEL & DISTRIBUTED COMPUTING

L	T	P	Cr
3	0	0	3

Course Objective: To understand the fundamentals of parallel and distributed programming and application development in different parallel programming environments.

Parallelism Fundamentals: Scope and issues of parallel and distributed computing, Parallelism, Goals of parallelism, Parallelism and concurrency, Multiple simultaneous computations, Programming Constructs for creating Parallelism, communication, and coordination. Programming errors not found in sequential programming like data races, higher level races, lack of liveness.

Parallel Architecture: Architecture of Parallel Computer, Communication Costs, parallel computer structure, architectural classification schemes, Multicore processors, Memory Issues: Shared vs. distributed, Symmetric multiprocessing (SMP), SIMD, vector processing, GPU, coprocessing, Flynn's Taxonomy, Instruction Level support for parallel programming, Multiprocessor caches and Cache Coherence, Non-Uniform Memory Access (NUMA).

Parallel Decomposition and Parallel Performance: Need for communication and coordination/synchronization, Scheduling and contention, Independence and partitioning, Task-Based Decomposition, Data Parallel Decomposition, Actors and Reactive Processes, Load balancing, Data Management, Impact of composing multiple concurrent components, Power usage and management. Sources of Overhead in Parallel Programs, Performance metrics for parallel algorithm implementations, Performance measurement, The Effect of Granularity on Performance Power Use and Management, Cost-Performance trade-off;

Distributed Computing: Introduction: Definition, Relation to parallel systems, synchronous vs asynchronous execution, design issues and challenges, A Model of Distributed Computations, A Model of distributed executions, Models of communication networks, Global state of distributed system, Models of process communication.

Communication and Coordination: Shared Memory, Consistency, Atomicity, Message- Passing, Consensus, Conditional Actions, Critical Paths, Scalability, cache coherence in multiprocessor systems, synchronization mechanism.

Parallel Algorithms design and Analysis: Parallel Algorithms, Parallel Graph Algorithms, Parallel Matrix Computations, Critical paths, work and span and relation to Amdahl's law, Speed-up and scalability, Naturally parallel algorithms, Parallel algorithmic patterns like divide and conquer, map and reduce, Specific algorithms like parallel Merge Sort, Parallel graph algorithms, parallel shortest path, parallel spanning tree, Producer-consumer and pipelined algorithms.

Course learning outcomes (CLOs): On completion of this course, the students will be able to

1. Identify the fundamentals of parallel and distributed computing including parallel architectures and paradigms.
2. Compare various parallel algorithms and key technologies.
3. Implement different parallel approaches for resolving real time problems like sorting, shortest path etc.
4. Analyze the communication and computation trade-offs in distributed systems.

Text Books:

1. C Lin, L Snyder. Principles of Parallel Programming. USA: Addison-Wesley (2008).

UEC735: BIG DATA ANALYTICS

L	T	P	Cr
2	0	2	3

Course Objective: Big Data Analytics course will inspire students to explore opportunities in the world of big data analytics. This course will take you from the basics of big data analytics to the advance analytical tools, methods and technology, which could be used for the big data analytics

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

projects. It also brings together several key big data technologies used for storage, analysis and manipulation of data.

Introduction to big data: Introduction to Big Data Platform – Challenges of Conventional Systems - Intelligent data analysis – Nature of Data - Analytic Processes and Tools - Analysis vs. Reporting, Use cases

Big-data Characteristics and issues: Characteristics and issues in Big-Data Analytics, Challenges associated with Big-data, Big-Data Analytical platforms, Storage and Architecture properties,

Big data using Apache Hadoop Stack: Introduction to Hadoop, HDFS and its architecture, Hadoop-Python framework and programming, Parallelization, MapReduce, Hadoop Client, Apache Sqoop Apache Flume, Hadoop Security, Apache Spark, Spark-Python framework, Pyspark programming and applications

Apache Hadoop Tools: Overview of hive and its architecture, Hive data types and File format, Hive query language (HQL), Apache Storm, Introduction to Pig, , Data types in Pig and Running Pig, Oozie, Mahout,

Laboratory Work: Data Engineering Hadoop ecosystem, Spark etc.

Course Learning Outcomes (CLO):

The student will be able to:

1. Identify the issues and challenges related to Big Data
2. Design efficient algorithms for mining the data from large volumes.
3. Analyze the HADOOP and Map Reduce technologies.
4. Implement Big Data analytics techniques for various applications.

Text Books:

UEC736: VLSI SIGNAL PROCESSING

L T P Cr
3 0 0 3.0

Course Objective: This course provides methodology to achieve VLSI architectures for various digital signal processing applications. It explores various possible high performance, low power and area efficient architectures/designs for a given signal processing algorithms.

Introduction: Brief review of IIR and FIR Filters, multirate signal processing, digital filter banks, concept of adaptive filters, least mean square (LMS) adaptive algorithm, Representation of DSP algorithms, signal flow, data flow and dependence graphs (DFGs).

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Algorithmic Transformation Approaches: **Iteration bound:** Loop and Iteration bound, Iteration rate, critical loop, critical path analysis, **pipelining and parallel processing:** pipelining of FIR filter, parallel processing of FIR filters, pipelining and parallel processing of DSP systems for low-power consumption, **Retiming:** cut-set retiming, clock period minimization, register minimization, **Unfolding:** sample period reduction, parallel processing: bit level and word level architectures of DSP systems, **Folding:** folding transformation, register minimization technique, forward backward register allocation technique, folding Bi-quad filters.

Algorithm Strength Reduction: Parallel FIR filters, polyphase decomposition, fast FIR filters algorithms, discrete cosine transform and inverse discrete cosine transform, algorithm-architecture transformation, DIT fast DCT.

Pipelined and Parallel Recursive Filters: concept of pipeline interleaving in digital filters, look ahead pipelining in IIR filters, clustered look-ahead pipelining, scattered look-ahead pipelining, parallel processing in IIR Filters.

Bit-level arithmetic architectures and numerical strength reduction: parallel multipliers, bit-serial multipliers, bit-serial IIR filter, canonic signed digit arithmetic, subexpression elimination, subexpression sharing in digital filters.

Course Learning Outcomes (CLO):

The student will be able to:

1. Analyze signal processing operations from VLSI implementation perspective.
2. Apply DSP algorithms to high performance and low power DSP architectures using pipelining, parallel processing and retiming.
3. Apply area efficient architectures using folding and algorithm strength reduction techniques for digital filters.
4. Develop highly area efficient and low power filter architectures using bit-serial approach or canonic-signed-digit arithmetic.

Reference Books:

1. Proakis, J.G., Digital Filters: Analysis, Design and Application, McGraw Hill (1981) 2nd ed.
2. Mitra, S.K., Digital Signal Processing. A Computer Based Approach, McGraw Hill (2007) 3rd edition

UEC734: QUANTUM COMPUTING

L	T	P	Cr
3	0	0	3.0

Course Objective: The main objective of this course is to provide an introduction to the main ideas and techniques of the field of quantum computation (qubits, quantum gates, and qubit systems). To understand the various applications of quantum algorithms in different areas. One of the main motivations for working in quantum computing is the prospect of fast quantum algorithms to solve important computational problems. Most striking is to study quantum entanglement.

Introduction to Quantum Mechanics: Linear algebra, Vector spaces, Inner product Vector spaces, Definition of Hilbert space, Dimension and basis of a vector space, Linear operators, Inverse and Unitary operators, Hermitian operators, Eigenvalues and Eigenvectors, Tensor products, Commutators, Spectral decomposition theorem, Quantum states, Definition of qubits, Matrix Representation of Kets, Bras, and Operators, Wave function.

Elements of Quantum Mechanics: The postulates of quantum mechanics: (State space, State Evolution, Quantum measurement, Distinguishing quantum states, Projective measurements, POVM measurements, Phase), Time Evolution Operator, Stationary States: Time-Independent Potentials, Time independent and Time dependent Schrödinger Equation and Wave Packets, The Conservation of Probability, Time Evolution of Expectation Values, The density operator, Ensembles of quantum states. Uncertainty principle, minimum uncertainty, Ehrenfest's theorem, E.P.R. paradox.

Quantum Computation: Multiple qubit unitary quantum gates: (CNOT, Swap, Toffoli, Fradkin, Hadamard Pauli gates), Concept of Bloch sphere, Quantum algorithms: (Deutsch–Jozsa algorithm, Shor's fast algorithms), Quantum search algorithm: Grover's algorithm, Concept of Quantum Fourier Transform. One dimensional Harmonic Oscillator quantum computer, Ion trap models.

Quantum Communication: Overview of Coherent States, Quantum Binary Communications Systems, The Holevo bound, Quantum Entropy, Classical information over noisy quantum channels, The quantum data processing inequality, Quantum Systems with BPSK Modulation, Overview of Squeezed States, Basic concept of Entanglement, Quantum key distribution.

Minor Project: Figure out how quantum algorithms work, compute the complexity of quantum search algorithm and how quantum Fourier transform works. Students should use the MATLAB or C or C++ for simulation purpose.

Course Learning Outcomes (CLOs):

The students will be able to

1. Identify mathematical background of quantum mechanics, states operators.
2. Analyze the quantum gates and quantum circuits.
3. Implement general foundations of telecommunications systems using quantum mechanics.
4. Apply the knowledge of states and quantum cryptography for designing a secure quantum communication system.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UEC752: IC FABRICATION TECHNOLOGY

L	T	P	Cr
3	0	0	3.0

Course Objective: To gain knowledge about crystal growth and wafer preparation techniques. Subsequently, the thoroughly understanding of different integral steps needed for IC components fabrication mainly bipolar and field effect transistors. To acquire knowledge of various packaging techniques.

Integrated Circuits: Introduction, Impact of ICs on Industry, Advantages over discrete components, Monolithic and Hybrid ICs, Scales of integration and related issues. Crystalline and non-crystalline materials used in IC fabrication.

Growth of Single Crystals wafers: Si crystal structure, Si crystal growth using Czochralski's method, Float Zone method and Bridgeman technique, characteristics and crystal evaluation, Wafer Shaping operations, Slicing, polishing and etching, Wafer cleaning.

Epitaxy Film Formation: Importance of epitaxial layer growth, Types of epitaxy: VPE, MBE, MOCVD, Defects in epitaxial layers and their removal.

Doping: Introduction, Basic concept of impurity diffusion in a semiconductor crystal. Fick's Laws, Analytical solution of diffusion equation, Gaussian solution near the surface and infinite medium. Ion-implantation, doping measurement methods.

Subsequent Processes: Thermal Oxidation, Photolithography, Electron beam and X-Ray lithography, Positive and negative photo resist, dry and wet etching, Metallization using PVD, and clean room: Standards.

MOSFET Technology: Design of junction diode, BJT, MOSFET and CMOS.

Packaging of I.C's: Importance of packaging, Mountings in packages using Dual-in-line (DIP) or TO packages. Packages using surface-mount-technology (SMT).

Familiarization with standards: IEEE 62659-2015.

Course Learning Outcomes (CLOs):

Upon completion of this course, the student will be able to:

1. Explain crystal growth and wafer preparation techniques.
2. Understand different fabrication processes used in IC industry.
3. Apply IC fabrication technology to fabricate different semiconductor devices.
4. Explain various packaging techniques.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UNC511: COMPILER CONSTRUCTION

L	T	P	Cr
2	0	2	3

Course Objectives: To Gain the working knowledge of the major phases of compilation and develop the ability to use formal attributed grammars for specifying the syntax and semantics of programming languages. Learn about function and complexities of modern compilers and design a significant portion of a compiler.

Introduction to compiling: Compilers, Analysis of the source program, the phases of Compiler, Compilation and Interpretation, Bootstrapping and Cross compiler.

Lexical Analysis: Need of Lexical analyzer, Tokens and regular expressions, Generation of lexical analyzer from DFA, Introduction to LEX and program writing in LEX.

Syntax Analysis: Need for syntax analysis and its scope, Context free grammar, Top down parsing, bottom up parsing, backtracking and their automatic generation, LL(1) Parser, LR Parser, LR(0) items, SLR(1), LALR(1), Canonical Parsing, Introduction to YACC and Integration with LEX.

Error Analysis: Introduction to error analysis, detection, reporting and recovery from compilation errors, Classification of error-lexical, syntactic and semantic.

Static semantics and Intermediate Code generation: Need for various static semantic analyses in declaration processing, name and scope analysis, S-attribute def. and their evaluation in different parsing, Semantic analysis through S-attribute grammar, L-attribute def. and their evaluation.

Run time Environment: Need for runtime memory management, Address resolution of runtime objects at compile time, Type checking, Language features influencing run time memory management, Parameter passing mechanism, Division of memory into code, stack, heap and static, Activation record, Dynamic memory management, garbage collection.

Code Generation: Code generation for expressions, Issues in efficient code generation, Sethi Ullman algorithm.

Code Optimization: Need for code optimizations, Local and global optimization, Control flow analysis, Data flow analysis, performing global optimizations, Graph coloring in optimization, Live ranges of run time values.

Laboratory work: Construct a lexical analyzer using Flex. Construct a parser using Bison/ any programming language. Build simple compilers from parsing to intermediate representation to code generation and simple optimization.

Course learning outcomes (CLOs):

After the completion of the course, the student will be able to:

1. Comprehend the working of major phases of compiler.
2. Apply top-down and bottom-up parsing techniques for the Parser construction.
3. Classify various parameters passing scheme, explain memory management techniques.
4. Apply code optimization techniques on HLL.

Text Books:

2. Dhamdhare, Compiler Construction, Macmillan Publication (2008), Edition 2nd ed.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UNC513: SOFTWARE ENGINEERING

L	T	P	Cr
2	0	2	3.0

Course Objective:

To plan and manage large scale software and learn emerging trends in software engineering.

Software Engineering and Processes: Introduction to Software Engineering, Software Evolution, Software Characteristics, Software Crisis: Problems and Causes, Software process models -Waterfall, Iterative, Incremental and Evolutionary process models

Requirements Engineering: Problem Analysis, Requirement Elicitation and Validation, Requirement Analysis Approaches- Structured Analysis Vs Object Oriented Analysis, Flow modeling through Data Flow Diagram and Data Dictionary, Data Modeling through E-R Diagram, Requirements modeling through UML, based on Scenario, Behavioral and Class modeling, documenting Software Requirement Specification (SRS)

Software Design and construction: System design principles like levels of abstraction, separation of concerns, information hiding, coupling and cohesion, Structured design (top-down or functional decomposition), object-oriented design, event driven design, component-level design, test driven design, data design at various levels, architecture design like Model View Controller, Client – Server architecture. Coding Practices: Techniques, Refactoring, Integration Strategies, Internal Documentation.

Software Verification and Validation: Levels of Testing, Functional Testing, Structural Testing, Test Plan, Test Case Specification, Software Testing Strategies, Verification & Validation, Unit and Integration Testing, Alpha & Beta Testing, White box and black box testing techniques, System Testing and Overview of Debugging.

Agile Software Development: Agile Manifesto, Twelve Practices of eXtreme Programming (XP), XP values, XP practices, velocity, spikes, working of Scrum, product backlog, sprint backlog, Adaptive Software Development(ASD), Feature Driven Development (FDD), Test Driven Development, Dynamic System Development Method(DSDM), and Crystal Methodology, Agile Requirement and Design: User Stories, Story Boards, UI Sketching and Story Cards.

Software Project Management: Overview of Project Management: Scope, Time and Cost estimations.

Laboratory Work

Implementation of Software Engineering concepts and exposure to CASE tools like Rational Software Suit through projects.

Course Learning Objectives (CLO)

The students will be able to:

1. Analyze software development process models for software development life cycle
2. Elicit, describe, and evaluate a system's requirements and analyze them using various UML models
3. Demonstrate the use of design principles in designing data, architecture, user and component level design
4. Test the system by planning appropriate test cases and applying relevant test

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

strategies

5. Comprehend the use of agile development methodologies including UI sketching, user stories, story cards and backlog management.

Text Books

1. Pressman R., Software Engineering, A Practitioner's Approach, McGraw Hill International, 7th ed. (2010).
2. Sommerville I., Software Engineering, Addison-Wesley Publishing Company, 9th ed.(2011).

1. Jalote P., An integrated Approach to Software Engineering, Narosa, 3rd ed. (2005).
2. Booch G.,Rambaugh J., Jacobson I., The Unified Modeling Language User Guide, 2nd ed. (2005).

GENERIC ELECTIVES

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UPH064 : NANOSCIENCE AND NANOMATERIALS

L	T	P	Cr
2	0	0	2.0

Course Objective: To introduce the basic concept of Nanoscience and advanced applications of nanotechnology.

Syllabus

Fundamental of Nanoscience: Features of Nanosystem, Free electron theory and its features, Idea of band structures, Density of states in bands, Variation of density of state and band gap with size of crystal,

Quantum Size Effect: Concepts of quantum effects, Schrodinger time independent and time dependent equation, Electron confinement in one-dimensional well and three-dimensional infinite square well, Idea of quantum well structure, Quantum dots and quantum wires,

Nano Materials: Classification of Nano Materials their properties, Basic concept relevant to application, Fullerenes, Nanotubes and nano-wires, Thin films chemical sensors, Gas sensors, Vapour sensors and Bio sensors,

Synthesis and processing: Sol-gel process, Cluster beam evaporation, Ion beam deposition, Chemical bath deposition with capping techniques and ball milling, Cluster assembly and mechanical attrition, Sputtering method, Thermal evaporation, Laser method,

Characterization: Determination of particle size, XRD technique, Photo luminescence, Electron microscopy, Raman spectroscopy, STEM, AFM,

Applications: Photonic crystals, Smart materials, Fuel and solar cells, Opto-electronic devices.

Laboratory Work: NA

Course Learning Objectives (CLO)

Upon completion of the course, Students will be able to

1. discriminate between bulk and nano materials,
2. establish the size and shape dependence of Materials' properties,
3. correlate 'quantum confinement' and 'quantum size effect' with physical and chemical properties of nanomaterials,
4. uses top-down and bottom-up methods to synthesize nanoparticles and control their size and shape
5. characterize nanomaterials with various physico-chemical characterization tools and use them in development of modern technologies

Recommended Books:

3. Booker, R., Boysen, E., *Nanotechnology*, Wiley India Pvt, Ltd, (2008)
4. Rogers, B., Pennathur, S., Adams, J., *Nanotechnology*, CRS Press (2007)
5. Bandyopadhyay, A.K., *Nano Materials*, New Age Int., (2007)
6. Niemeyer, C. N., and Mirkin, C. A., *Nanobiotechnology: Concepts, Applications and Perspectives*, Wiley VCH, Weinheim, Germany (2007)

Evaluation Scheme:

Sr. No.	Evaluation Elements	Weightage (%)
1	MST	45
2	EST	55

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UEN006 : TECHNOLOGIES FOR SUSTAINABLE DEVELOPMENT

L	T	P	Cr
2	0	0	2.0

Course Objective: To provide acquaintance with modern cleaner production processes and emerging energy technologies; and to facilitate understanding the need and application of green and renewable technologies for sustainable development of the Industry/society.

Syllabus

Concepts of Sustainability and Industrial Processes: Industrialization and sustainable development; Cleaner production (CP) in achieving sustainability; Source reduction techniques - Raw material substitution; Process modification and equipment optimization; Product design or modification; Reuse and recycling strategies; Resources and by-product recovery from wastes; Treatment and disposal; CDM and Pollution prevention programs; Good housekeeping; CP audits,

Green Design: Green buildings - benefits and challenges; public policies and market-driven initiatives; Effective green specifications; Energy efficient design; Passive solar design; Green power; Green materials and Leadership in Energy and Environmental Design (LEED)

Renewable and Emerging Energy Technologies: Introduction to renewable energy technologies- Solar; wind; tidal; biomass; hydropower; geothermal energy technologies; Emerging concepts; Biomolecules and energy; Fuel cells; Fourth generation energy systems.

Laboratory Work: NA

Course Learning Objectives (CLO)

Upon completion of the course, the students will be able to:

12. comprehend basic concepts in source reduction, waste treatment and management
13. Identify and plan cleaner production flow charts/processes for specific industrial sectors
14. examine and evaluate present and future advancements in emerging and renewable energy technologies

Recommended Books:

2. Kirkwood, R,C, and Longley, A,J, (Eds.), *Clean Technology and the Environment*, Chapman & Hall, London (1995),
3. *World Bank Group; Pollution Prevention and Abatement Handbook – Towards Cleaner Production*, World Bank and UNEP; Washington DC (1998),
4. Modak, P,, Visvanathan, C, and Parasnis, M,, *Cleaner Production Audit, Course Material on Cleaner Production and Waste Minimization; United Nations Industrial Development Organization (UNIDP) (1995),*
5. Rao, S, and Parulekar, B,B,, *Energy Technology: Non-conventional; Renewable and Conventional; Khanna Pub,(2005) 3rd Ed,*

Evaluation Scheme:

Sr. No.	Evaluation Elements	Weightage (%)
1	MST	45
2	EST	55

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UHU017 : INTRODUCTION TO COGNITIVE SCIENCE

L	T	P	Cr
2	0	0	2.0

Course Objective: This course provides an introduction to the study of intelligence, mind and brain from an interdisciplinary perspective, It encompasses the contemporary views of how the mind works, the nature of reason, and how thought processes are reflected in the language we use, Central to the course is the modern computational theory of mind and it specifies the underlying mechanisms through which the brain processes language, thinks thoughts, and develops consciousness.

Syllabus

Overview of Cognitive Science: Newell's big question, Constituent disciplines, Interdisciplinary approach, Unity and diversity of cognitive science,

Philosophy: Philosophy of Mind, Cartesian dualism Nativism vs, empiricism, Mind-body problem, Functionalism, Turing Test, Modularity of mind, Consciousness, Phineas Gage, Physicalism.

Psychology: Behaviorism vs, cognitive psychology, The cognitive revolution in psychology, Hardware/software distinction, Perception and psychophysics, Visual cognition, Temporal dynamics of visual perception, Pattern recognition, David Marr's computational theory of vision, Learning and memory, Theories of learning, Multiple memory systems, Working Memory and Executive Control, Memory span, Dissociations of short- and long-term memory, Baddeley's working memory model.

Linguistics: Components of a grammar, Chomsky, Phrases and constituents, Productivity, Generative grammars, Compositional syntax, Productivity by recursion, Surface- and deep structures, Referential theory of meaning, Compositional semantics, Semantics, Language acquisition, Language and thought.

Neuroscience: Brain anatomy, Hierarchical functional organization, Decorticate animals, Neuroimaging, Neurophysiology, Neuron doctrine, Ion channels, Action potentials, Synaptic transmission, Synaptic plasticity, Biological basis of learning, Brain damage, Amnesia, Aphasia, Agnosia, Parallel Distributed Processing (PDP), Computational cognitive neuroscience, The appeal of the PDP approach, Biological Basis of Learning, Cajal's synaptic plasticity hypothesis, Long-term potentiation (LTP) and depotentiation (LTD), NMDA receptors and their role in LTP, Synaptic consolidation, Vertical integration, The Problem of representation, Shannon's information theory.

Artificial Intelligence: Turing machines, Physical symbol systems, Symbols and Search Connectionism, Machine Learning, Weak versus strong AI, Subfields, applications, and recent trends in AI, Turing Test revisited, SHRDLU, Heuristic search, General Problem Solver (GPS), Means-ends analysis.

Cognitive architectures: Tripartite architecture, Integration, ACT-R Architecture Modularity.

Laboratory Work: NA

Course Learning Objectives (CLO)

Upon completion of the course, the students will be able to:

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

1. Identify cognitive science as an interdisciplinary paradigm of study of cross-cutting areas such as Philosophy, Psychology, Neuroscience, Linguistics, Anthropology, and Artificial Intelligence.
2. Explain various processes of the mind such as memory and attention, as well as representational and modelling techniques that are used to build computational models of mental processes;
3. Acquire basic knowledge of neural networks, linguistic formalism, computing theory, and the brain.
4. Apply basic Artificial Intelligence techniques to solve simple problems.

Recommended Books:

1. Bermúdez, J.L., *Cognitive Science: An Introduction to the Science of the Mind* (2nd Ed.), Cambridge, UK: Cambridge (2014).
2. Friedenberg, J.D, and Silverman, G, *Cognitive Science: An Introduction To The Study Of Mind*, Sage Publications., London (2014)
3. Thagard, P., *Mind: An introduction to Cognitive Science*, MIT Press, (2005)

Thagard, P., (1998) *Mind Readings: Introductory Selections on Cognitive Science*, MIT Press, Cambridge, Mass

UHU018: INTRODUCTION TO CORPORATE FINANCE

L	T	P	Cr
2	0	0	2.0

Course Objective: This course aims to provide the students with the fundamental concepts, principles and approaches of corporate finance, enable the students to apply relevant principles and approaches in solving problems of corporate finance and help the students improve their overall capacities.

Syllabus

Introduction to corporate finance: Finance and corporate finance. Forms of business organizations, basic types of financial management decisions, the goal of financial management, the agency problem; the role of the financial manager; basic types of financial management decisions.

Financial statements analysis: Balance sheet, income statement, cash flow, fund flow financial statement analysis Computing and interpreting financial ratios; conducting trend analysis and Du Pont analysis.

The time value of money: Time value of money, future value and compounding, present value and discounting, uneven cash flow and annuity, discounted cash flow valuation.

Risk and return: Introduction to systematic and unsystematic risks, computation of risk and return, security market line, capital asset pricing model.

Long-term financial planning & Financial Decisions: Various sources of long-term financing, the elements and role of financial planning, financial planning model, percentage of sales approach, external financing needed. Cost of capital, financial leverage, operating leverage. Capital structure, theories of capital structure net income, net operating income & M&M proposition I and II.

Short-term financial planning and management: Working capital, operating cycle, cash cycle, cash budget, short-term financial policy, cash management, inventory management, credit management.

Capital budgeting: Concepts and procedures of capital budgeting, investment criteria (net present value, payback, discounted payback, average accounting return, internal rate of return, profitability index), incremental cash flows, scenario analysis, sensitivity analysis, break-even analysis,

Dividend policy: Dividend, dividend policy, Various models of dividend policy (Residual approach, Walter model, Gordon Model, M&M, Determinants of dividend policy.

Security valuation: Bond features, bond valuation, bond yields, bond risks, stock features, common stock valuation, and dividend discount & dividend growth models. Common stock yields, preferred stock valuation.

Laboratory Work: NA

Course Learning Objectives (CLO)

Recommended Books:

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

1	MST	45
2	EST	55

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UMA069: GRAPH THEORY AND APPLICATIONS

L	T	P	Cr
2	0	0	2.0

Course Objective: The objective of the course is to introduce students with the fundamental concepts in graph Theory, with a sense of some its modern applications. They will be able to use these methods in subsequent courses in the computer, electrical and other engineering.

Syllabus

Introduction: Graph, Finite and infinite graph, incidence and degree, Isolated vertex, Pendent vertex and null graph, Isomorphism, Sub graph, Walks, Paths and circuits, Euler circuit and path, Hamilton path and circuit, Euler formula, Homeomorphic graph, Bipartite graph, Edge connectivity, Computer representation of graph, Digraph.

Tree and Fundamental Circuits: Tree, Distance and center in a tree, Binary tree, Spanning tree, Finding all spanning tree of a graph, Minimum spanning tree.

Graph and Tree Algorithms: Shortest path algorithms, Shortest path between all pairs of vertices, Depth first search and breadth first of a graph, Huffman coding, Cuts set and cut vertices, Warshall's algorithm, topological sorting.

Planar and Dual Graph: Planner graph, Kuratowski's theorem, Representation of planar graph, five-color theorem, Geometric dual.

Coloring of Graphs: Chromatic number, Vertex coloring, Edge coloring, Chromatic partitioning, Chromatic polynomial, covering.

Application of Graphs and Trees: Konigsberg bridge problem, Utilities problem, Electrical network problem, Seating problem, Chinese postman problem, Shortest path problem, Job sequence problem, Travelling salesman problem, Ranking the participant in a tournament, Graph in switching and coding theory, Time table and exam scheduling, Applications of tree and graph in computer science.

Laboratory Work: NA

Course Learning Objectives (CLO)

Upon completion of the course, the students will be able to:

2. understand the basic concepts of graphs, directed graphs, and weighted graphs and able to present a graph by matrices.
3. understand the properties of trees and able to find a minimal spanning tree for a given weighted graph.
4. understand Eulerian and Hamiltonian graphs.
5. apply shortest path algorithm to solve Chinese Postman Problem.
6. apply the knowledge of graphs to solve the real-life problem.

Recommended Books:

6. Deo, N., *Graph Theory with Application to Engineering with Computer Science*, PHI, New Delhi (2007)
7. West, D. B., *Introduction to Graph Theory*, Pearson Education, London (2008)

8. *Bondy, J. A. and Murty, U.S.R., Graph Theory with Applications, North Holland Publication, London (2000)*
9. *Rosen, K. H., Discrete Mathematics and its Applications, Tata-McGraw Hill, New Delhi (2007)*

Evaluation Scheme:

Sr. No.	Evaluation Elements	Weightage (%)
1	MST	45
2	EST	55

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UMA070 : ADVANCED NUMERICAL METHODS

L	T	P	Cr
2	0	0	2.0

Course Objective: The main objective of this course is to motivate the students to understand and learn various advanced numerical techniques to solve mathematical problems governing various engineering and physical problems.

Syllabus

Non-Linear Equations: Methods for multiple roots, Muller's, Iteration and Newton-Raphson method for non-linear system of equations and Newton-Raphson method for complex roots.

Polynomial Equations: Descartes' rule of sign, Birge-vieta, Giraffe's methods.

System of Linear Equations: Cholesky and Partition methods, SOR method with optimal relaxation parameters.

Eigen-Values and Eigen-Vectors: Similarity transformations, Gerschgorin's bound(s) on eigenvalues, Given's and Rutishauser methods.

Interpolation and Approximation: Cubic and B – Spline and bivariate interpolation, Least squares approximations, Gram-Schmidt orthogonalisation process and approximation by orthogonal polynomial, Legendre and Chebyshev polynomials and approximation.

Differentiation and Integration: Differentiation and integration using cubic splines, Romberg integration and multiple integrals.

Ordinary differential Equations: Milne's, Adams-Moulton and Adam's Bashforth methods with their convergence and stability, Shooting and finite difference methods for second order boundary value problems.

Laboratory Work: NA

Course Learning Objectives (CLO)

Upon completion of this course, the students will be able to:

7. find multiple roots of equation and apply Newton -Raphson's method to obtain complex roots as well solution of system of non - linear equations.
8. learn how to obtain numerical solution of polynomial equations using Birge - Vitae and Giraffe's methods.
9. apply Cholesky, Partition and SOR methods to solve system of linear equations.
10. understand how to approximate the functions using Spline, B- Spline, least square. approximations
11. learn how to solve definite integrals by using cubic spline, Romberg and initial value problems and boundary value problems numerically.

Recommended Books:

1. Gerald, C.F. and Wheatley, P.O., *Applied Numerical Analysis*, Pearson Education (2008) 7th ed.
2. Gupta, S.R., *Elements of Numerical Analysis*, MacMillan India (2009).
3. Atkinson, K.E., *An introduction to Numerical Analysis*, John Wiley (2004) 2nd ed.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

4. *S.D. Conte, S.D. and Carl D. Boor, Elementary Numerical Analysis: An Algorithmic Approach, Tata McGraw Hill (2005).*
Jain M. K., Iyengar. S.R.K. and Jain, R.K. Numerical Methods for Scientific and Engineering Computation, New Age International (2008) 5th ed

Evaluation Scheme:

Sr. No.	Evaluation Elements	Weightage (%)
1	MST	45
2	EST	55

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UHU016: INTRODUCTORY COURSE IN FRENCH

L	T	P	Cr
2	0	0	2.0

Course Objective: The objectives of the course is to introduce to the students:

5. The basics of French language to the students. It assumes that the students have minimal or no prior knowledge of the language.
6. To help them acquire skills in writing and speaking in French, comprehending written and spoken French.
7. The students are trained in order to introduce themselves and others, to carry out short conversation, to ask for simple information, to understand and write short and simple messages, to interact in a basic way.
8. The main focus of the students will be on real life language use, integration of French and francophone culture, & basic phrases aimed at the satisfaction of needs of concrete type.
9. During class time the students are expected to engage in group & pair work.

Syllabus

Communicative skills: Greetings and Its Usage, Asking for and giving personal information, How to ask and answer questions, How to talk over the phone, Exchange simple information on preference, feelings etc. Invite, accept, or refuse invitation, Fix an appointment, Describe the weather, Ask for/give explanations, Describe a person, an object, an event, a place.

Grammar : Pronouns: Pronom sujets (Je/ Tu/Il/Elle/Nous/Vous/Ils/Elles), Nouns: Genders, Articles: Definite article and Indefinite articles, Verbs: Regular verbs (-er, -ir ending) Irregular verbs (-re ending), Auxiliary verbs (avoir, être, aller). Adjective: Description, Adjective possessive, Simple Negation, Tense: Present, Future, Questions, Singular & plural.

Vocabulary: Countries and Nationalities, Professions, Numbers (ordinal, cardinal), Colours, Food and drinks, Days of the week, Months, Family, Places.

Phonetics: The course develops the ability, to pronounce words, say sentences, questions and give orders using the right accent and intonation. To express surprise, doubt, fear, and all positive or negative feelings using the right intonation. To distinguish voiced and unvoiced consonants. To distinguish between vowel sounds.

Laboratory Work: NA

Upon the completion of the course:

3. The students begin to communicate in simple everyday situations acquiring basic grammatical structure and vocabulary.
4. The course develops oral and reading comprehension skills as well as speaking and writing.

5. Students can demonstrate understanding of simple information in a variety of authentic materials such as posters, advertisement, signs etc.
6. Discuss different professions, courses and areas of specialisation.
7. Write simple messages, letters, composition and dialogues. Complete simple forms and documents.
8. Express feelings, preferences, wishes and opinions and display basic awareness of francophone studies.
9. Units on pronunciation and spelling expose students to the different sounds in the French language and how they are transcribed.

Recommended Books:

Connexions-1 : Méthode de français by Régine Mérieux, Yves Loiseau, Editions Didier Version Originale-1: Méthode de français by Monique Denyer, Agustin Garmendia.

Marie-Laure Lions-Olivieri, Editions Maison des Langues, Paris 2009

Latitudes-1 : Méthode de français by Régine Mérieux, Yves Loiseau, Editions Didier

Campus-1 : Méthode de français by Jacky Girardet, Jacques Pécheur, Editions CLE International.

Echo-1 : Méthode de français by J. Girardet, J. Pécheur, Editions CLE International.

UBT510: BIOLOGY FOR ENGINEERS

L	T	P	Cr
2	0	0	2.0

Course Objective: To learn about living world and basic functioning of biological systems. The course encompasses understanding of origin of life, its evolution and some of its central characteristics. It also aims to familiarize engineering students to some of the intricate biological phenomena and mechanisms.

Syllabus

Characteristics of life: Living versus non-living organisms, origin of life, theory of evolution, diversity of life, classification of life into animals, plants, fungi, protists, archaea and bacteria. Phylogenetics and its relationship with evolution.

Introduction to biological systems: Cell as basic unit of life, cellular organelles and their functions, important biomacromolecules (carbohydrates, lipids, proteins and nucleic acids) and their properties.

Cell membrane: Membrane structure, selective permeability, transport across cell membrane, active and passive transport, membrane proteins, type of transport proteins, channels and pumps, examples of membrane transport in cell physiology.

Classical and molecular genetics: Heredity and laws of genetics, genetic material and genetic information, Structure and properties of DNA, central dogma, replication of genetic information, universal codon system, encoding of genetic information via transcription and translation.

Laboratory Work: NA

After completion of this course the students will be able to:

1. Describe living-systems and differentiate them from non-living systems
2. Explain the theory of evolution and apply it non-living world
3. Apply properties of nucleic acids in molecular recognition-based diagnostics
4. Familiarized with various transport mechanisms across cell membranes

Explain how genetic information is stored, replicated and encoded in living

Recommended Books:

1. Nelson, D.L., Cox, M.M., Lehninger: Principles of Biochemistry, WH Freeman (2008) 5th ed.
2. Dharmi, P.S., Srivastava, H.N. Chopra, G., A Textbook of Biology, Pradeep Publications (2008).
3. Das, H.K., Textbook of Biotechnology, John Wiley & Sons (2004) 3rd Edition.
4. Gardner, E.J., Simmons, M., Peter, S.D., Principles of Genetics, John Wiley & Sons (2008)
5. Albert, B., Essential Cell Biology, Taylor & Francis, London (2009)

UCS002: INTRODUCTION TO CYBER SECURITY

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

L	T	P	Cr
2	0	0	2.0

Course Objective: In this course, the student will learn about the essential building blocks and basic concepts around cyber security such as Confidentiality, Integrity, Availability, Authentication, Authorization, Vulnerability, Threat and Risk and so on.

Syllabus

Introduction: Introduction to Computer Security, Threats, Harm, Vulnerabilities, Controls, Authentication, Access Control, and Cryptography, Authentication, Access Control, Cryptography

Programs and Programming: Unintentional (Non-malicious) Programming Oversights, Malicious Code—Malware, Countermeasures

Web Security: User Side, Browser Attacks, Web Attacks Targeting Users, Obtaining User or Website Data, Email Attacks

Operating Systems Security: Security in Operating Systems, Security in the Design of Operating Systems, Rootkit

Network Security: Network Concepts, Threats to Network Communications, Wireless Network Security, Denial of Service, Distributed Denial-of-Service Strategic Defenses: Security Countermeasures, Cryptography in Network Security, Firewalls, Intrusion Detection and Prevention Systems, Network Management

Cloud Computing and Security: Cloud Computing Concepts, Moving to the Cloud, Cloud Security Tools and Techniques, Cloud Identity Management, Securing IaaS

Privacy: Privacy Concepts, Privacy Principles and Policies, Authentication and Privacy, Data Mining, Privacy on the Web, Email Security, Privacy Impacts of Emerging Technologies, Where the Field Is Headed

Management and Incidents: Security Planning, Business Continuity Planning, Handling Incidents, Risk Analysis, Dealing with Disaster

Legal Issues and Ethics: Protecting Programs and Data, Information and the Law, Rights of Employees and Employers, Redress for Software Failures, Computer Crime, Ethical Issues in Computer Security, Incident Analysis with Ethics

Emerging Topics: The Internet of Things, Economics, Computerized Elections, Cyber Warfare.

Laboratory Work: NA

After completion of this course, the students will be able to:

1. Understand the broad set of technical, social & political aspects of Cyber Security and security management methods to maintain security protection
2. Appreciate the vulnerabilities and threats posed by criminals, terrorist and nation states to national infrastructure
3. Understand the nature of secure software development and operating systems
4. Recognize the role security management plays in cyber security defense and legal and social issues at play in developing solutions.

Recommended Books:

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

1. *Pfleeger, C.P., Security in Computing, Prentice Hall, 5th edition (2010)*
2. *Schneier, B., Applied Cryptography, Second Edition, John Wiley & Sons (1996)*
3. *Rhodes-Ousley, M., Information Security: The Complete Reference, Second Edition, Information Security Management: Concepts and Practice. New York, McGraw-Hill, (2013).*
4. *Whitman, M.E. and Herbert J. M., Roadmap to Information Security for IT and Infosec Managers, Course Technology, Boston, MA (2011).*

Evaluation Scheme:

Sr. No.	Evaluation Elements	Weightage (%)
1	MST	45
2	EST	55

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

INDUSTRY COLLABORATIVE ELECTIVES

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

UCS539: Finance, Accounting and Valuation

L	T	P	Cr
2	0	2	3

Course Objective: Understanding relationships of finance, accounting and valuation of securities.

Syllabus

Introduction to Accounting: Meaning of accounting, the accounting process, fundamental equation, types of accounts, accounting statements, recording of transactions, conceptual framework

Summary Statements: Types of summary statements, preparation of the statements, relationship between the statements, introduction to financial statement analysis

Basics of Finance: Meaning of finance, process of financial decision making, types of financial decisions, capital structure decisions.

Time Value of Money: Meaning, principle, calculations, interest rates, importance of interest rates, importance of different types of interest rates and returns.

Valuation: Introduction to valuation, valuation of stocks, valuation of bonds, methods and techniques.

Laboratory Work: To gain an understanding of proprietary software for international derivatives

1. Introduction to proprietary software.
2. Detailed understanding of basic features of proprietary software.
3. Understanding order types and their implementation
4. Regular practice to understand execution of basic strategies.
5. Introduction to trading and investment.
6. Introduction to analytical methods

Course Learning Objectives (CLO)

The students will be able to:

- 1 Evaluate the performance of AM and FM modulator and demodulator.
- 2 Analyze the concept of different pulse modulation techniques.
- 3 Assess the discrete PAM signals and the efficacy of baseband shaping in reducing ISI during baseband data transmission, while also examining how correlative coding leverages ISI for achieving high data rates.
- 4 Perform statistical analysis of the transmitted and received modulated waveforms from estimation and detection point of view.
- 5 Evaluate the performance of digital modulation techniques of digital communication system operating over AWGN channel
- 6 Analyze the concepts of channel coding to mitigate the effects of interference and noise in the channel.

Recommended Prerequisites: Basics of Microsoft Excel

Reference Books

1. *Jamie Pratt. (8th Edition). Financial Accounting in an Economic Context.*
2. *Ross, Westerfield, Jaffe & Jordan. Corporate Finance: Core Principles and Applications.*

UCS537: SOURCE CODE MANAGEMENT

L	T	P	Cr
2	0	2	3

Course Objective: The objective of the course is to teach techniques to combine software development and IT operations using DevOps. It helps to understand faster software development practices with higher quality.

Syllabus

Traditional Software Development: The Advent of Software Engineering, Waterfall method, Developers vs IT Operations conflict.

Rise of Agile methodologies: Agile Vs Waterfall Method, Iterative Agile Software Development, Individual and team interactions over processes and tools, working software over comprehensive documentation, Customer collaboration over contract negotiation, responding to change over following a plan

Definition and Purpose of DevOps: Introduction to DevOps, DevOps and Agile, Minimum Viable Product, Application Deployment, Continuous Integration, Continuous Delivery CAMS (Culture, Automation, Measurement and Sharing): CAMS – Culture, Automation, Measurement, Sharing, Test-Driven Development, Configuration Management, Infrastructure Automation, Root Cause Analysis, Blamelessness, Organizational Learning.

Typical Toolkit for DevOps: Introduction to continuous integration and deployment, Version control system

Source Code Management History and Overview: Examples - SVN, Mercury and Git, History - Linux and Git by Linus Torvalds,

Version Control System: Version control system vs Distributed version control system: Local repository, Advantages of distributed version control system, The Multiple Repositories Models, completely resetting local environment, Revert - cancelling out changes.

Laboratory Work: Basic structure and Implementation of various distributed version control systems for source code management.

Course Learning Objectives (CLO)

After completion of this course, the students will be able to:

1. Identify the need for migrating from traditional software development to Agile model and then to DevOps.
2. Define and understand the basic principles and need of DevOps and Continuous Delivery.
3. Understand the history and overview of Source Code Management, along with real-time examples.
4. Differentiate between centralized and distributed version control systems and basic operations in version control systems and Demonstrate the use of various version control systems.

Text Books

1. *The DevOps Handbook* - Book by Gene Kim, Jez Humble, Patrick Debois, and Willis

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Willis.

2. *Pro Git – Book by Scott Chacon and Ben Straub (available at <https://git-scm.com/book/>).*

Reference Books:

1. *What is DevOps? - by Mike Loukides.*

UCS660: Continuous Integration and Continuous Deployment

L	T	P	Cr
2	0	2	3

Course Objective: The objective of the course is to teach techniques to automate the process of integration and deployment of software product. It covers prerequisites, anatomy and framework/tools used for the automated process of continuous integration and continuous deployment.

Syllabus

DevOps Automation: Phases in software development-delivery pipeline, components of automated software delivery, RAD model and model driven architecture.

Automation Benefits: advantages of automation, Time and efforts saving scenarios, error preventing scenarios.

Continuous Integration and Continuous Deployment Introduction: Overview and practices of continuous integration, working mechanism and benefits of continuous integration; continuous delivery's introduction and pipeline. Prerequisites and benefits, introduction and business drivers of continuous deployment, benefits of continuous deployment.

Stages and Anatomy of CI CD: Core continuous integration process and advanced continuous integration process, release process, continuous delivery engineering practices, continuous testing & promotion of builds, continuous monitoring of delivery pipeline, understanding continuous feedback process.

Testing, Debugging and Refactoring: Understanding test-driven development (TDD), categories of TDD, Junit framework, need for code refactoring, its process and strategies.

Understanding Framework and Tools: Common frameworks and code architectures, third party code, IDEs (Eclipse, Netbeans and IntelliJ), common mistakes and avoiding them, issues with making code IDE dependent.

Laboratory Work: Setting up Jenkins, Jenkins job, parameters, build, post-build actions and pipeline; Jenkins plugins, using Jenkins as a continuous integration server; Configuring Jenkins with git plugin; Jenkins pipeline to poll the feature branch.

Course Learning Objectives (CLO)

After completion of this course, the students will be able to:

1. Identify the need for migrating from traditional software development to Agile model and then to DevOps.
2. Define and understand the basic principles and need of DevOps and Continuous Delivery.
3. Understand the history and overview of Source Code Management, along with real-time examples.
4. Differentiate between centralized and distributed version control systems and basic operations in version control systems and Demonstrate the use of various version control systems.

Text Books

1. Gene Kim, Jez Humble, Patrick Debois, John Willis, "The DevOps

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Handbook: How to Create World-Class Agility, Reliability, and Security in Technology Organizations”, IT revolution Press (2016) 1st ed.

Reference Books:

1. Sander Rossel, “Continuous Integration, Delivery, and Deployment: Reliable and Faster Software Releases with Automating Builds, Tests, and Deployment”, Packt Publishing (2017) 1st ed.

UCS659: BUILD AND RELEASE MANAGEMENT

L	T	P	Cr
2	0	2	3

Course Objective: This course includes theory and lab. The course comprises four modules. The main objective of this course to help participants understand the process of build and release management.

Syllabus

Introduction to Build and Release Management: Introduction to build, understanding different phases of build and release management, introduction to release management, best practices for build and release management, concept of build abstraction and dependency abstraction.

Dependency Management: Introduction to dependency management, how to use source code repositories, managing transitive dependencies, dependency scope and discussion of various tools like Ant, Maven and Gradle.

Document and Reporting: Introduction to build document and reporting, different types of documentation, understanding site life cycle, advance site configurations and reports, generation of unit test reports, generation of code coverage reports, code coverage tools, code coverage pros and cons.

Release Cycle: To understand project release life cycle, different stages of release lifecycle, source code repositories, how to install and configure source code repositories and deploying build to production goals- prepare, perform, clean and rollback.

Laboratory Work: Setting up Maven environment and understanding POM hierarchy, creation of a project using Maven and its configurations.

Course Learning Objectives (CLO)

After completion of this course, the students will be able to:

1. Explain the basics of build and release management by learning build abstraction and declarative dependency management.
2. Describe dependency management and the associated concepts like repositories, dependency identification and scope, transitive dependencies, and examples for build tools.
3. Discuss the process of documentation and reporting, using site life cycle, site configuration and generation of unit testing and code coverage reports
4. Define release cycle and the phases of release, preparing, cleaning and performing goals.

UCS675: Financial Markets and Portfolio Theory

L	T	P	Cr
2	0	2	3

Course Objective: Understanding various financial markets and their interrelationships

Syllabus

Banks and Financial Institutions: Types of financial institutions, evolution of financial system, flow of money, creation of money

Monetary System: Monetary authority, monetary policy framework, policy tools, comparison of different countries

Risk and Return: Meaning of risk, meaning of return, estimation of risk and return

Capital and Money Markets: Meaning, types, capital and money market instruments

Portfolio Theory: Meaning of portfolio, theoretical principles, choices, optimal weights, optimal portfolio choice, introduction to pricing models

Laboratory Work: To use the proprietary software in live international derivatives

1. Introduction to an international derivatives product
2. Introduction to technical analysis
3. Practice of analytical methods on the proprietary software
4. Introduction to evaluation methods

Recommended Prerequisites: Course – Finance, Accounting and Valuation;

Course Learning Objectives (CLO)

After the completion of the course, the student will be able to:

1. Explain the role of the financial system and the process of creation of money
2. Explicate various monetary policy tools
3. Explain relationship between risk and return
4. Explicate the types of capital markets and money markets including the market instruments
5. Apply the portfolio theory to choose an optimal portfolio

Reference Books:

1. *Financial Markets and Institutions* – Anthony Saunders & Marcia Millon Cornett
2. *Ross, Westerfield, Jaffe & Jordan. Corporate Finance: Core Principles and Applications.*

CS658: Derivatives Pricing, Trading and Strategies

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

L	T	P	Cr
2	0	2	3

Course Objective: Understanding methods of valuation and strategies of trading derivative instruments.

Syllabus

Law of One Price: Meaning, implication of the law of one price, no arbitrage model, usage in pricing of securities and derivative instruments

Pricing and Valuation: Basic principles, building blocks, assumptions, difference between price and value, pricing and valuation of basic derivative instruments

Basics of Option Pricing: Meaning of options, types of options, difference between options and basic derivative instruments

Laboratory Work: To use the proprietary software in live international derivatives

1. Introduction to derivatives strategies
2. Introduction to an additional international derivatives product
3. Learning and creating trading strategies
4. Practicing the strategies on the proprietary software
5. Understanding the role of derivatives in risk reduction

Recommended Prerequisites: Courses Finance, Accounting and Valuation + Financial Markets and Portfolio Theory.

Course Learning Objectives (CLO)

After the completion of the course, the student will be able to:

1. Explain and apply the law of one price in pricing models
2. Explicate and apply formulae to calculate price and value of a generic forward contract
3. Explain and apply formulae to calculate price and value of basic derivative instruments
4. Explicate the meaning and types of options
5. Apply the basic methods to calculate option prices

Reference Books:

1. *Fundamentals of Futures and Options Markets* - John C. Hull
2. *Ross, Westerfield, Jaffe & Jordan. Corporate Finance: Core Principles and Applications.*

UMC743: Quantitative and Statistical Methods for Finance

L	T	P	Cr
2	0	2	3

Course Objective: Understanding quantitative and statistical methods used for finance and derivatives.

Syllabus

Refresher on Statistics: Correlation, OLS regression, probability distributions and moments, using Microsoft Excel for statistical calculations and interpretations

Option Pricing Introduction to option pricing models, formulae and derivation, option Greeks, risk management using options

Financial Time Series: Introduction to time series, types, univariate and multivariate time series models, autocorrelation, AR models, MA models, ARMA models, ARIMA models, stationary series, unit-root

Volatility: Meaning of volatility, types, methods of calculation, volatility models, estimation

Laboratory Work: To use the proprietary software in live international derivatives

1. Introduction to other derivative products
2. Refining trading strategies created in previous courses.
3. Practicing the strategies on the proprietary software.
4. Application of the quantitative and statistical methods
5. Introduction to algorithmic trading on the proprietary software

Recommended Prerequisites: Courses – Finance, Accounting and Valuation + Financial Markets and Portfolio Theory + Derivatives Pricing, Trading and Strategies

Course Learning Objectives (CLO)

After the completion of the course, the student will be able to:

1. Explain and apply the time series models learnt for financial data
2. Explicate and apply PCA for financial data
3. Explain and apply option pricing models to calculate prices of options
4. Explicate types of volatility and volatility models
5. Apply the basic methods learnt to estimate volatility

Reference Books:

1. *Introduction to Time Series Analysis and Forecasting* - Douglas C. Montgomery, Cheryl L. Jennings
2. *Fundamentals of Futures and Options Markets* - John C. Hull

UCS758: System Provisioning and Configuration Management

L	T	P	Cr
2	0	2	3

Understanding Containers: Transporting goods analogy and its problems, Containerization platform, images and runtime, comparison with virtual machine, chroot system call, FreeBSD Jails, Linux containers (LXC), Docker.

Introduction to Containerization: Docker architecture, different environments (Dev, QA and Prod), overcoming issues with different environments, virtual machine for dev/deployments, containers for dev/deployments, advantages and drawbacks of containerization.

Orchestration Tools: Orchestration: its definition and need, Docker swarm and Kubernetes, AWS (ECS and EKS), Kubernetes on cloud, monitoring containers and its process.

Introduction to Provisioning: Basic and software definition, provisioning concepts, reason for exclusive provisioning, configuration management definition and tools, difference between provisioning and configuration management, provisioning tools, test machines for provisioning, deployment and its relationship with provisioning.

On Premise Provisioning: Understanding and Defining On Premise, On Premise provisioning infrastructure, Templating, server templating and its challenges.

Provisioning on Cloud: defining cloud provisioning, types of cloud provisioning, life-cycle of provisioning on cloud, On Premise cloud mitigation strategies, network security enablement from On Premises to cloud, micro-services management in cloud.

Provisioning and Configuration Management: State of tools in provisioning and configuration, definition and need for configuration management, its benefits and drawbacks in DevOps, need for monitoring in DevOps, reasons for using provisioning and configuration tools, automation, preventing errors and tracking changes, examples of tools and their capabilities.

Laboratory Work: System Provisioning: Automation of infrastructure, AWS configuration for Terraform, create IAM User, security group, spinning up with EC2 instance, variables, resources, modules, state management, VPC, IAM policy, S3 bucket and its variables.

Containers Lab: Playing with Vagrant and understanding its file, Docker machine, Dockerfile, Docker extras, DTR, Docker compose and swarm, Kubernetes -Minikube, deploying Pods and services on Minikube.

Course Learning Objectives (CLO)

After the completion of the course the student will be able:

1. Understand the concept of Virtualization and Containerization.
2. Familiarize Orchestration and System provisioning.
3. Analyze and demonstrate the infrastructure automation and state management in the cloud environment.
4. Understand and demonstrate the need for configuration management

UCS542: UI & UX SPECIALIST

L	T	P	Cr
2	0	2	3

Course Objective: The main objective of this course is to impart concepts related with web technology which are essential for the development of web applications. The key technology components include web markup languages, client and server side programming.

Syllabus

HTML& CSS: Introduction to HTML, Introduction, HTML Page Structure, Create HTML document, Understand the various elements available in HTML, HTML Use, Attributes in HTML, Need of Attributes, Common Attributes, HTML forms, Apply validations to the form elements, Creating web pages with HTML5, HTML5 introduced features, HTML5 form validate/no validate, HTML5 canvas, embedding audio, and video in a webpage, drag and drop, HTML5 Local Storage, HTML5 web workers and server sent events. What is CSS, how to insert CSS in HTML, How CSS adds value to HTML, Difference between Semantic and HTML mark-up, CSS3, CSS Selectors, Buttons, CSS float and clear, CSS align - horizontal and center, CSS Padding, CSS Links, CSS Lists, CSS Tables.

JavaScript: What is JavaScript, Importance of JavaScript, What can JavaScript Do?, JavaScript with HTML Attributes, JavaScript with CSS, Operators, JavaScript Syntax, JavaScript Data Types, JavaScript Functions, Setting up Environment, Variables, Control flow, if. Else, switch, loops, JavaScript HTML DOM Elements, JavaScript Syntax, Operators, Data Types, JavaScript String Methods, JavaScript Functions, Arrays, Sorting, Joins, Reduce map.

Frontend Architecture: Introduction to Frontend Development, History, MVC, MVP, MVVM& Web Apps, Development of AJAX, Introduction to DOM, Basic DOM Manipulation, Reactive Programming, Refreshing ES6 Specifications and Features ECMA Script, ES6 let and const, The arrow functions, New Literal Syntax, Classes, Inheritance using extends, Default Parameter Values, Spread Operator (...), Iterators and Generators, Features of React, Practical Application, Why need React, How React Works, Leveraging Virtual DOM, Setting up React.

REST API, JSX: Why JSX, Embedding JavaScript Expression in JSX, JSX Attributes, JSX Comments, Styling and Representation as Object, The State of the Component, Changing the State, Props of Component, Using Props, Props Validation in React, Similarities Between State & Props RESTAPI : Intro to API, History of API Development, Development of AJAX, CRUD; GraphQL; HTTP ,HTTP 1.1,HTTP/2, Stream prioritization, Introduction to React Native, Setting up React Native, The Expo Client, Working up on the First Project, Style, Flexbox Layout.

Node.js: Introduction to Node.js, History, Why Node.js, Node.js Architecture, Features, Working of Node.js, Installation & Setting Up Node, setting up React, REPL Environment, REPL Commands, Variable, Components of Node.js, Local Modules, Module Exports:

Export Object, Export Class, Loading Module from Separate Folder, Operating System, File Systems.

Laboratory Work:

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Course Learning Objectives (CLO)

After the completion of the course the student will be able:

1. To acquire knowledge and skills for creation of full web framework considering both client and server side programming.
2. To develop a dynamic and interactive WebPages by the use of HTML, XHTML, CSS, Java script and DHTML.
3. To build web apps with fully functional frontend with database connectivity.
4. To undertake transfer of multimedia content over the Internet between the multi platforms web applications through communication protocols and the learner will also be able to build web API.

Text Books

1. M. Srinivasan, *Web Technology: Theory and Practice*, Pearson (2012).
2. A.Kumar, *Web Technology: Theory and Practice*, CRC Press (2018).

Reference Books:

1. *Web programming with HTML, XHTML and CSS, 2e*, Jon Duckett, Wiley India.
2. *Web technologies: A Computer Science Perspective*, Jeffrey C. Jackson ,1st ed., Pearson (2007).

UCS677: DATA ENGINEERING

L	T	P	Cr
2	0	2	3

Course Objective: Basic concepts of database, Mongo DB, SQL, and Java script.

Syllabus

Getting started with MongoDB: No SQL Databases, Features of MongoDB, Installation overview, Documents, Collections, Databases, What is the NoSQL approach? Why Use the NoSQL Approach, Benefits of No SQL, Types of Databases, Key-Value Stores, Wide-column Stores/ Columnar Databases, Document/Document-store/Document-oriented Databases, Graph-based Databases, Starting and stopping MongoDB

Javascript in MongoDB: Javascript in MongoDB, Execution of a JavaScript file in MongoDB, Making the output of find readable in shell, Complementary Terms, Installation, Basic commands on mongo shell, HelloWorld, Create, Update Delete, Read, Update of embedded documents, more update operators, Updating multiple documents.

Collections: List all collections in the database, List all databases, Find(), FindOne(), limit, skip, sort and count the results of the find() method, Query Document – Using AND, OR and IN Conditions, find() method with Projection, Find() method with Projection, \$set operator to update specified field(s) in document(s), Insert a document, Create a Collection, Drop Collection, Aggregation

Indexes: Indexes, Index Creation Basics, Dropping/Deleting an Index, Sparse indexes and Partial indexes, Get Indices of a Collection, Compound, Unique Index, Single field, Delete, List, Mongoas Shards

Sharding Environment Setup: Managing Database for Availability and Performance, Database Scaling, Database Distribution Models, Database Replication, Types of Database Replication, Master-Slave Replication, Peer-to-Peer Replication, Advantages and Disadvantages of Peer-to-Peer Replication, Introduction to Sharding, Why Sharding, The Lookup Strategy, Basic configuration with three nodes, Mongo as a Replica Set, Mongoos.

Laboratory Work:

Course Learning Objectives (CLO)

After the completion of the course the student will be able to:

1. Learn NoSQL, Mongo DB, and Javascript.
2. Apply basic concepts of indexing and collections using MongoDB.
3. Formulate the basic usage of database such as graph-based database, creating and dropping of collections, and indexing and solving real-world problems.
4. Able to handle and update multiple documents using Mongo DB.
5. Able to manage database for availability and performance, and scaling of database.

Text Books

1. Andreas Kretz, *The Data Engineering Cook Book*, 6th ed. (2019)

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

2. Alex Petrov, *Database Internals: A deep dive into how distributed data systems work*, O'REILLY Publication (2021).

Reference Books:

1. S. Bradshaw, Eoin Brazil, and Kristina Chodorow, *MongoDB: The definite guide: Powerful and Scalable Data Storage*, O'REILLY Publication (2021).

2. Dan Sullivan, *NoSQL for Mere Mortals*, O'REILLY Publication (2021).

UCS662: TEST AUTOMATION

L	T	P	Cr
2	0	2	3

Course Objective: The course provides understanding of software testing and how to use various tools (like Selenium and TestNG etc.) used for automation of software testing.

Syllabus

Introduction to Software Testing: Seven principles of Software Testing, SDLC vs STLC, Testing Life Cycle, Usability Testing, why do we need Usability Testing, how to do Usability testing, Advantages & Disadvantages, Functional Testing, End to End Testing, Methods, Advantages & Disadvantages, Compatibility Testing, Types GUI testing, Techniques API testing, Advantages

Test Automation: Selenium: Selenium components, Selenium Architecture, TestNG: Installing TestNG in Eclipse, TestNG Annotations – Understanding usage, setting priority of execution for test cases, Hard Assertion, Soft Assertion, TestNG Reports, ANT-Downloading & Configuring, XSLT report generation using TestNG and Ant.

Introduction to Selenium 3.x: Describe Selenium 3.x advantages and implementation, Define drivers for Firefox, IE, chrome, iPhone, Android etc. Analyze first Selenium Code, differentiate between Close and Quit, Describe Firepath and firebug Add-ons installation in Mozilla, inspect elements in Mozilla, Chrome and IE, Identifying Web Elements using id, name, class, Generate own CSS Selectors. Differentiate between performance of CSS Selectors as compared to Xpaths, define class attribute, Handle Dynamic objects/ids on the page, Analyze whether object is present on page or not

Manual Testing: Manual Testing, Manual Testing – How to Approach? Manual Testing – Myth and fallacy, Defect Life Cycle, Qualities of a good Manual Tester, Manual Testing Vs Automation Testing, Types, System Testing, Acceptance Testing, Unit Testing, Techniques, Integration Testing, Smoke- Sanity Testing

Introduction to Test Design: Test Scenario, Test Case Design, Test Basis Traceability Matrix

Laboratory Work:

Course Learning Objectives (CLO)

After the completion of the course the student will be able to:

1. Understand the concepts related to software testing and test automation.
2. Take into account the different considerations when planning automated tests vs. manual tests
3. Architect the test project and fit it to the architecture of the tested application
4. Design and implement highly reliable automated tests
5. Understand how different types of automated tests will fit into your testing strategy, including unit testing, load and performance testing, visual testing, and more

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

Text Books

1. Axelrod Arnon, *Complete Guide to Test Automation: Techniques, Practices, and Patterns for Building and Maintaining Effective Software Projects*, A press (2018).
2. Gundecha U. and Cocchiaro C., *Learn Selenium: Build data-driven test frameworks for mobile and web applications with Selenium Web Driver 3*, Packt (2019).

Reference Books:

1. Diego Molina, *Selenium Fundamentals*, Packt (2018).
2. Aditya P. Mathur, *Foundations of Software Testing*, Pearson Education(2008).

UCS745: CLOUD & DEVOPS

L	T	P	Cr
2	0	2	3

Course Objective: The objective of the course is to teach techniques to automate the process of integration and deployment software product.

Syllabus

Introduction to DevOps: Definition of DevOps, Challenges of traditional IT systems & processes, History and emergence of DevOps, DevOps definition and principles governing DevOps, DevOps and Agile, The need for building a business use case for DevOps, Purpose of DevOps, Application Deployment, Automated Application Deployment, Application Release Automation (ARA), Components of Application Release Automation (ARA), Continuous Integration, Best Practices of CI, Benefits of CI, Continuous Delivery

Typical Toolkit for DevOps: DevOps, An Overview, Achieving DevOps, Continuous Practices, Continuous Integration (CI), How does CI Work? Continuous Integration Practices, Benefits of Continuous Integration A Quick Recap of Continuous Delivery, Continuous Delivery Process, Benefits of Continuous Delivery, Continuous Deployment

Source Code Management: History of Version Control Systems (VCS), Basic operations in a VCS, Examples of version control systems, Subversion (SVN), Features and Limitations, Mercurial, Git, Overview, History - Linux and Git by Linus Torvalds, Advantages of Git, Explain how local version control works, Centralized Version Control Systems (CVCS), Distributed Version Control Systems (DVCS), advantages of DVCS, Private Workspace, Easier merging, Easy to scale horizontally, List the disadvantages of DVCS, Explain how CVCS and DVCS compare with each other, Describe the working of the multiple repositories model Unit IV Application Containerization Understanding Containers: Transporting Goods Analogy, Problems in Shipping Industry before Containers, Shipping Industry Challenges, Container: Virtualization Introduction, Hypervisor, Scope of Virtualizations, Containers vs Virtual Machines, Understanding Containers, Containerizations Platform, Runtime and Images, Container Platform, Container Runtime, The Chroot System, FreeBSD Jails, Linux Containers (LXC), Docker

Introduction to Containerization: Docker architecture, Docker Daemon (Container Platform), Docker Rest API, CLIDifferent environments: (Dev, QA and Prod), Overcoming issues with different environments, Development Environment Docker Swarm and Kubernetes, Architecture, AWS (ECS, EKS), AWS Elastic Container Services Architecture, Azure Kubernetes Services, Openshift, Kubernetes on cloud, Monitoring of container

Laboratory Work:

Course Learning Objectives (CLO)

After the completion of the course the student will be able to:

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

1. Understand the benefits of DevOps over other software development processes.
2. Understand the phases of software development-delivery pipeline and automation benefits.
3. Identify and apply continuous integration and deployment prerequisites, process and benefits.
4. Understand and implement the continuous delivery engineering practices and release process.
5. Identify & use the test-driven deployment and various tools/frameworks used for continuous integration and delivery in DevOps.
6. Demonstrate the different DevOps Tools like Git, Docker, and Kubernetes etc.

Text Books

UCS551: Conversational AI: Accelerated Data Science

L	T	P	Cr
2	0	2	3

Course Objective: This course will provide students with fundamental and advanced methods of data science: from Data Collection to Analytics and Machine Learning with RAPIDS on Text and Graphical problems.

Syllabus

Introduction: Fundamentals of Data Science, GPU Acceleration, RAPIDS Framework

Data Collection: Collecting Data, Scraping Data, Popular Scraping libraries, Data Annotation

Data Pre-processing (ETL): Introduction to Data-preprocessing, Data Cleaning & Statistical Preprocessing, Data Cleaners: OpenRefine and Wrangler, Feature Selection: Introduction to Filter Methods, Introduction to Model- based methods, Feature Reduction: PCA.

Introduction to Machine Learning - Supervised: Introduction to Supervised Learning, Linear Model, RAPIDS acceleration: Linear Regression, Overfitting and Cross Validation, Decision Tree, Visualizing Classification: {ROC, AUC, Confusion Matrix}, Bagging, Random Forests, RAPIDS Acceleration: Random Forest, Boosting, RAPIDS acceleration: K-NN, XGBoost.

Introduction to Machine Learning - Unsupervised: Introduction to Unsupervised Learning, Kmeans & Hierarchical Clustering, RAPIDS acceleration: K-Means, DBSCAN, PCA, t-SNE, UMAP, Visualizing Clusters, RAPIDS acceleration: PCA [t-SNE], UMAP, DBSCAN.

Graph Analytics: How to Represent & Store Graphs, Graph Power Laws, Centralities: Degree, Betweenness, Clustering Coefficient, PageRank & Personalized PageRank, Interactive Graph Exploration, RAPIDS Acceleration: Graphistry & cuXFilter.

Introduction to Deep Learning: Introduction to Artificial Neural Networks (ANNs), Artificial Neurons, Layers, Perceptron, Multilayer Perceptron, Advanced Deep Neural Networks (DNNs), Batch Normalization, Hyperparameter tuning, Activation Functions, Metrics, Optimization, Regularization.

Laboratory Work:

1. Introduction to Dockers & Containers, Introduction to NVIDIA GPU Cloud (NGC).
2. Practical on Traditional Data Science packages (Numpy, Pandas, Scipy, Scikit-Learn).
3. Accelerated Data Science framework RAPIDS: Introduction to RAPIDS and cuDF.
4. Data Collection via API/Web Scraping.
5. Decision Tree Classification Clustering in RAPIDS.
6. Random Forest Classification in RAPIDS.
7. KMeans Clustering Implementation in RAPIDS.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

8. Dimensionality Reduction and Visualization in RAPIDS.
9. Graph Analytics with cuGraph.
10. Latent semantic indexing for text via singular value decomposition(cuML).
11. Accelerating Workloads using RAPIDS
12. Introduction to DL Frameworks: PyTorch, and Tensorflow (Keras)

Course Learning Objectives (CLO)

After the completion of the course the student will be able to:

1. In depth understanding of Data Analytics, Pre-processing and Visualization Toolkits.
2. Comprehend and apply different classification and clustering techniques.
3. Understand GPU computing for building advanced data science applications.
4. Understand the concept of Neural Networks and its implementation using deep learning frameworks.

Text Books

1. Mitchell M., T., *Machine Learning*, McGraw Hill (1997) 1st Edition.
2. Alpaydin E., *Introduction to Machine Learning*, MIT Press (2014) 3rd Edition.
3. Vijayvargia Abhishek, *Machine Learning with Python*, BPB Publication (2018).

Reference Books:

1. Bishop M., C., *Pattern Recognition and Machine Learning*, Springer-Verlag (2011) 2nd Edition.

UCS664: Conversational AI: Natural Language Processing

L	T	P	Cr
2	0	2	3

Course Objective: This course provides a broad introduction to deep learning and natural language processing. It offers some of the most cost-effective approaches to automated knowledge acquisition in the emerging field of natural language understanding using deep learning and GPU Computing.

Syllabus

Introduction: Natural Language Processing and its Applications, Introduction to Deep Learning, NVIDIA Toolkits, SDKs and platforms for Deployment.

Introduction to Natural Language Processing: What is NLP, Principles and Traditional Methods, Linguistics, Why Machine Learning and Deep Learning.
{Theory, Basics , Lectures}

Introduction to Deep Learning: Introduction to Artificial Neural Networks (ANNs), Artificial Neurons, Layers, Perceptron, Multilayer Perceptron, Advanced Deep Neural Networks (DNNs), Batch Normalization, Hyperparameter tuning, Activation Functions, Metrics, Optimization, Regularization.

Introduction to NLP using Deep Learning: Embeddings: Feedforward NN, Word2Vec, GloVE, Contextualization (ELMo etc.), Deep Recurrent Models: RNNs, GRUs, LSTMs.
{Lectures and DLI}

Advanced NLP using Deep Learning: Introduction to NeMo, Self-Attention, Transformer Networks: BERT and its Variants, Megatron etc, Working with open source datasets: GLUE Benchmarks.

Applications of NLP: Exploring NLP Problem Statements- Information Retrieval, Intent Slot Filling, Machine Translation, Punctuation & Capitalization, Question and Answering Machine Machine, Relation Extraction, Sentiment Analysis, Token Classification in NeMo.

{General Papers, Blog , Survey Papers, Nemo}

Introduction to NVIDIA Toolkits and SDKs: Transfer Learning Toolkit, TensorRT Optimization, Triton Inference Server for Inferencing and Deployments, Various Visualization Tools, Kubernetes Deployment.

Laboratory Work:

- Introduction to DL Frameworks: TLT, PyTorch, and Tensorflow (Keras).
- Binary Classification with Perceptron and Logistic Regression.

{DLI Online Course: Getting Started with Deep Learning.}

{DLI Online Course: Deep Learning at Scale with Horovod.}

{DLI Online Course: Modeling Time-Series Data with Recurrent Neural Networks in Keras.}

- Neural Modules (NeMo) for Training Conv AI Models, Exploring NeMo Fundamentals, Exploring NeMo Model Construction, Nemo Swap App Demo.
- Sentiment Analysis & Text Classification with NeMo.
- Intent Slot Filling for ChatBot using Joint Bert Model with NeMo.
- Machine Translation with NeMo.
- Question & Answering Machine with NeMo.
- Information Retrieval, Punctuation & Capitalization, Relation Extraction, Sentiment Analysis, Token Classification with NeMo.
- Hands-on practical on TensorRT Optimization, Triton Inference Server.

Course Learning Objectives (CLO)

After the completion of the course the student will be able to:

1. Understand the concept of Neural Networks and its implementation in the context of Machine Learning.
2. Exploring GPU computing for building deep learning based text analytics applications.
3. Deep understanding Conversational AI Toolkit: NeMo for training Deep Neural Network.
4. Practical Work around on Various NVIDIA SDKs for training and deployment: AMP, Horovord, TensorRT, Triton and so on.

UCS749: Conversational AI: Speech Processing & Synthesis

L	T	P	Cr
2	0	2	3

Course Objective: This course will provide students with the overall structure of the Conversational AI pipeline including Speech Processing, Recognition, and Synthesis and building end to end workflows using NeMo and Jarvis SDK.

Syllabus

Introduction: Fundamentals of Speech Processing, Applications of Speech Processing and Deploying NLP, ASR and TTS modules in Jarvis.

Fundamentals of Speech Processing: Introduction to Statistical Speech Processing, HMMs for Acoustic Modeling, WFTS for Automatic Speech Recognition (ASR), Basics of Speech Production, Tied State HMMs, Introduction to NNs in Acoustic Modeling (Hybrid/TDNN/Tandem).

{Papers}

Automatics Speech Recognition (ASR): ASR - DNN models (Jasper, QuartzNet, Citrinet, Conformer-CTC), Open-source Datasets, Language Modelling: N-Gram, Neural Rescoring.

{[Survey](#) , [Jasper](#), [QuartzNet](#), [CitriNet](#) , [Nemo](#)}

Applications of Speech Processing: Speech Commands: Speech Commands Recognition using MatchboxNet. Overview of Noise Augmentation, Voice Activity Recognition and Speaker Recognition.

{[Survey](#), [Nemo](#)}

Speech Synthesis: Text Normalization: Preparing Dataset and Text Normalization for input to Speech Synthesis model. Introduction to Text-to-Speech (TTS) Models:- Mel Spectrogram Generator: - Tacotron-2, Glow-TTS, Audio Generators:- WaveGlow, SqueezeWave.

{[Papers](#), [Nemo](#)}

Jarvis Deployment: Introduction to Jarvis, Overview of Jarvis ASR, NLU and TTS APIs, Introduction to Jarvis Dialog Manager. Jarvis Deployment:- Nemo model deployment for ASR, NLP and TTS.

Laboratory Work:

- Practical Exercise on Statistical Speech Processing. {Traditional Signal Processing}
- Automatic Speech recognition with NeMo on English Dataset.
- Automatic Speech recognition with NeMo on Indic Language(Hindi) Dataset.
- NeMo Speech Commands Recognition using MatchboxNet, Noise Augmentation, and Speaker Recognition.
- Text to Speech using Tacotron-2 and WaveGlow with NeMo on English Dataset.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

- Text to Speech using Tacotron-2 and WaveGlow with NeMo on Indic Language (Hindi) Dataset.

- End-to-End Conversational AI Model (Any Language): ASR/NLP/TTS with NeMo and Jarvis.

Course Learning Objectives (CLO)

After the completion of the course the student will be able to:

1. Understand Speech Processing pipeline for various applications with accelerated computing. ASR, Speaker Recognition etc.
2. Exploring Speech Synthesis on various data sets.
3. Deep practical hands-on experience from training to deployment of these applications using NVIDIA GPUs and Toolkits:- NeMo, and Jarvis.

Text Books

UCS748: Generative AI

L	T	P	Cr
2	0	2	3

Course Objective: This course introduces students to the field of generative artificial intelligence with a focus on Large Language Models (LLMs). Students will learn the theoretical foundations behind LLMs and gain hands-on experience in training and fine-tuning these models for various generative tasks such as text generation, image generation, and more.

Syllabus

Introduction to Generative AI: Generative AI: Meaning, Capabilities and Potential, Applications of Generative AI, Tools for text, images, videos, audios and code generation.

Generative AI Models: Introduction to Large Language Models (LLMs), History and evolution of LLMs, Transformer architecture: Attention mechanism, Pre-training and fine-tuning of LLMs, Language modeling objectives (e.g., Masked Language Modeling, Next Sentence Prediction), Data preprocessing for LLMs, Training strategies and best practices, Fine-tuning on custom datasets, Handling domain-specific data and tasks.

Text Generation with LLMs: Text generation techniques, Conditional text generation, Sampling strategies, Evaluation metrics for text generation

Image Generation with LLMs: Overview of image generation tasks, Generative Adversarial Networks (GANs) vs. LLMs for image generation, Fine-tuning LLMs for image generation, Evaluation metrics for image generation

Beyond Text and Images: Multi-Modal Generation: Introduction to multi-modal generation, Combining LLMs with other generative models, Applications of multi-modal generation.

Prompt Engineering: Meaning of Prompts and Prompt Engineering, Text-to-text prompt techniques: Interview Pattern Approach, Chain-of-Thought Approach, Tree-of-Thought Approach.

Laboratory Work:

1. Pre-train a small language model on a text corpus and fine-tune it on a specific task or dataset
2. Fine-tune pre-trained language models on custom datasets for specific tasks like sentiment analysis or text classification.
3. Implement autoregressive decoding to generate text using a pre-trained language model and explore its limitations.
4. Build a conditional text generation model that takes input prompts or contexts to generate relevant responses.
5. Build a basic GAN architecture using a deep learning framework like TensorFlow or PyTorch.

6. Explore techniques to fine-tune pre-trained language models like GPT for image generation tasks using frameworks like CLIP.
7. Experiment with combining LLMs like GPT with other generative models like GANs or Variational Autoencoders (VAEs) for multi-modal generation tasks.
8. Implement a multi-modal generation model that generates coherent captions for given images or generates images from textual descriptions.
9. Explore real-world applications of multi-modal generation such as image captioning, visual question answering (VQA), and generating visual explanations from textual input.

Course Learning Objectives (CLO)

After the completion of the course the student will be able to:

1. Understand the theoretical foundations of Large Language Models (LLMs).
2. Apply LLMs for various generative tasks including text generation, image generation, and more.
3. Train and fine-tune LLMs on custom datasets.
4. Explore advanced topics and applications of LLMs in research and industry.

Text Books

1. *"Deep Learning" by Ian Goodfellow, Yoshua Bengio, and Aaron Courville*
2. *"Generative Deep Learning: Teaching Machines to Paint, Write, Compose, and Play" by David Foster.*
3. *"Dive into Deep Learning" by Aston Zhang.*

Reference Books:

1. *"Attention is All You Need" by Ashish Vaswani et al.*
2. *"Natural Language Processing with PyTorch" by Delip Rao and Brian McMahan*
3. *"GPT-3: Language Models are Few-Shot Learners" by Brown et al.*

UCS547: Edge AI and Robotics: Accelerated Data Science

L	T	P	Cr
2	0	2	3

Course Objective: This course will provide students with fundamental knowledge of Traditional Robotics, Edge GPU Computing and Machine Learning and Deep Learning Primer.

Syllabus

Introduction: Overview of Robotics and Kinematics, Edge Computing with Jetson Devices, GPU Computing, Dockers & Containers, Parallel Programming, Machine Learning with RAPIDS.

Basics of Robotics: Introduction to Robotics, Traditional Image Processing: Camera Geometry, Color Sensing, Fourier Transforms, Image Convolution, Edge Detection, Feature Detection: Filters, SIFT, HOG.

{Robotics edx}

Advanced Concepts of Robotics: Optical Flow Estimation, Image Morphing, Image Blending, Image Carving, Probability and Statistics.

{Robotics edx}

Image Processing and Parallel Programming: GPU Programming, CUDA C/C++/Python, Accelerated Image Processing, nvJPEG, Numba.

Introduction to Machine Learning - Supervised: Introduction to Supervised Learning, Linear Model, RAPIDS acceleration: Linear Regression, Overfitting and Cross Validation, Decision Tree, Visualizing Classification: {ROC, AUC, Confusion Matrix}, Bagging, Random Forests, RAPIDS Acceleration: Random Forest, Boosting, RAPIDS acceleration: K- NN, XGBoost.

Laboratory Work:

- Introduction to Dockers & Containers, Introduction to NVIDIA GPU Cloud (NGC).
- Practical on Traditional Data Science packages (Numpy, Pandas, Scipy, Scikit-Learn).
- CUDA C/C++ for Accelerated Computing.
- {DLI Online Course Section: Fundamentals of Accelerated Computing with CUDA C/C++}
- Numba to compile CUDA kernels for Numpy Acceleration in Python.
- {DLI Online Course Section: Fundamentals of Accelerated Computing with CUDA Python}
- Getting started with Accelerated Data Science with RAPIDS AI (cuPy, cuDF, cuSignal, cuML).
- Decision Tree Classification Clustering in RAPIDS.
- Random Forest Classification in RAPIDS.

- {DLI Online Course Section: Fundamentals of Accelerated Data Science with RAPIDS, Section 2: GPU-accelerated Machine Learning}.

Course Learning Objectives (CLO)

After the completion of the course the student will be able to:

- 1 Comprehend different theoretical aspects & terminologies of Robotics and Edge Computing.
2. Understand the concept of Neural Networks and its implementation in the context of Machine Learning.
3. Understand GPU computing for building advanced data science applications.
4. Deep understanding Machine Learning, Data Analytics and Data Science Toolkits with optimized acceleration using RAPIDS Framework.
5. Working with Deep Neural Networks using Transfer Learning Toolkit, Pytorch and Tensorflow.

Text Books

1. Mitchell M., T., *Machine Learning*, McGraw Hill (1997) 1st Edition.
2. Alpaydin E., *Introduction to Machine Learning*, MIT Press (2014) 3rd Edition.
3. Vijayvargia Abhishek, *Machine Learning with Python*, BPB Publication (2018)..

Reference Books:

1. Bishop M. C., *Pattern Recognition and Machine Learning*, Springer-Verlag (2011) 2nd Edition.
2. Michie D., Spiegelhalter J. D., Taylor C. C., Campbell, J., *Machine Learning, Neural and Statistical Classification*. Overseas Press (1994).

UCS668: Edge AI and Robotics: Data Centre Vision

L	T	P	Cr
2	0	2	3

Course Objective: This course will provide students with basic fundamental understanding and practical hands-on training of computer vision and deep learning models on data centre GPU servers.

Syllabus

Introduction: Introduction to Deep Learning, Formulating Computer Vision Problem Statements, Image Classification using CNN Architectures like VGG, Inception, ResNet(18/34/50/152). Working towards building Object detection and Segmentation pipelines, Moving towards various approaches to solve Medical Imaging Problems.

Introduction to Deep Learning: Introduction to Artificial Neural Networks (ANNs), Artificial Neurons, Layers, Perceptron, Multilayer Perceptron, Advanced Deep Neural Networks (DNNs), Batch Normalization, Hyperparameter tuning, Activation Functions, Metrics, Optimization, Regularization.

Applications of Computer Vision (Image Classification): Introduction to NVIDIA Frameworks: {Transfer Learning using Transfer Learning Toolkit (TLT), Mixed Precision, DALI}, Image Classification using Deep CNN Architecture like VGG, ResNet18/34/50, re- training on custom dataset.

Applications of Computer Vision (Object Detection & Segmentation): Introduction to Object Detection, Data Preprocessing, CNN Architecture like {SSD, YOLOv3}, Metrics, Loss Functions, re-training on custom dataset, Segmentation: FCN-ResNet, Unet, MaskRCNN, Metrics and Loss functions.

Advanced Vision and its Application in Medical Imaging: Introduction to Unsupervised Learning, Self-Supervised Learning, Medical Datasets, Generative Adversarial Networks.

Laboratory Work:

- Image Classification with RAPIDS-based Random Forest.
- Introduction to DL Frameworks: TLT, PyTorch, and Tensorflow (Keras).
- Binary Classification with Perceptron and Logistic Regression.
- {DLI Online Course: Getting Started with Deep Learning}
- {DLI Online Course: Deep Learning at Scale with Horovod}
- Training Classification Models with and without Mixed Precision and Multi-GPU on Open & Custom Datasets.
- Training Detection Models with and without Mixed Precision and Multi-GPU on Open & Custom Datasets.
- Training Segmentation Models with and without Mixed Precision and Multi-GPU on Open & Custom Datasets.
- {DLI Online Course: Getting Started with Image Segmentation}
- {DLI Online Course: Medical Image Classification Using the MedNIST Dataset}

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

- {DLI Online Course: Image Classification with TensorFlow: Radiomics — 1p19q Chromosome.

Course Learning Objectives (CLO)

After the completion of the course the student will be able to:

- 1 Understand the fundamental problems of computer vision.
2. Apply basic concepts of computer vision in various application domains which include robotics, healthcare, and graphics.
3. Analyze and evaluate the building and integration of computer vision algorithms and systems decomposition.
4. To implementation of various concepts in the key issues related to computer vision.

Text Books

1. Mitchell M., T., *Machine Learning*, McGraw Hill (1997) 1st Edition.
2. Alpaydin E., *Introduction to Machine Learning*, MIT Press (2014) 3rd Edition.
3. Vijayvargia Abhishek, *Machine Learning with Python*, BPB Publication (2018).
4. *Computer Vision: Algorithms and Applications*, R. Szeliski, Springer, 2011.
5. *Computer Vision: A Modern Approach*, D. Forsyth and J. Ponce, Prentice Hall, 2nd ed., 2011.

Reference Books:

1. Bishop M. C., *Pattern Recognition and Machine Learning*, Springer-Verlag (2011) 2nd Edition.
2. *Introductory techniques for 3D computer vision*, E. Trucco and A. Verri, Prentice Hall, 1998.
3. "Visualizing and Understanding Convolutional Networks" by Matthew D. Zeiler and Rob Fergus (2014)
4. "Convolutional Neural Networks for Visual Recognition" (Stanford course given by Fei-Fei Li, Andrej Karpathy, and Justin Johnson, 2016): <http://cs231n.github.io/>

UCS671: Edge AI and Robotics: Embedded Vision

L	T	P	Cr
2	0	2	3

Course Objective: This course will provide students with advanced conceptual knowledge and practicals on various computer vision and deep learning applications and provide the overall environment for end-to-end pipeline development from data collection to deployment.

Syllabus

Introduction: Utilizing Jetpack SDK and other NVIDIA Toolkits to deploy CNN models on Jetson, Creating Jetbot kits and deploying various applications, Working with NVIDIA Robotics toolkit: Isaac SIM SDK and Gazebo for collision avoidance, path following.

Introduction to Edge AI: AI at the Edge & IoT, Jetson Architecture, Getting Started with Jetpack, NGC Containers in Jetson, Getting started with NGC & Containers on Jetson.

Introduction to NVIDIA Toolkits and SDKs: Transfer Learning Toolkit, TensorRT Optimization, Triton Inference Server for Inferencing and Deployments, Various Visualization Tools, Kubernetes Deployment, Deepstream SDK, Deploying Classification, Detection and Segmentation CNN Models on Jetson Devices.

Perception & Autonomous Navigation: Building JetBot Kits, Introduction to basic motion on JetBot, Collision Avoidance: Stop/Go classifier (JetBot), freespace detection, Path Following: Recording user input/video + DNN training (DriveNet), Simulation: Gazebo & Isaac SIM.

Advanced Vision & SLAM: Pose Recognition (Deploying Human pose model), Depth Estimation: Mono/Stereo depth and point extraction, Visual Odometry: Camera pose estimation from DNNs, SLAM on JetBot.

Laboratory Work:

- Setting up the Jetson Project kit.
- {DLI Online Course: Getting Started with AI on Jetson Nano.}
- Deployment of Various Classification, Object Detection and Segmentation models using TensorRT, and Triton Inference Server in Jetson Nano.
- Getting started building various Jetbot Kits.
- Basic Motion with Jetbot
- Collision Avoidance with Jetbot kit
- Object following and Road following (DriveNet) with Jetbot.
- Teleoperation with Jetbot.
- Human Pose Estimation in Jetson Nano/JetBot.
- Implementing SLAM on Jetbot.

Course Learning Objectives (CLO)

After the completion of the course the student will be able to:

1. Introducing concepts of Edge computing and Jetson kits.

Approved in 109th meeting of the Senate held on March 16, 2023. Revised in 112th and 113th meeting of the Senate held on March 11 and September 7, 2024, respectively.

2. Provide understanding of approaches, concepts and algorithms used in computer vision deployments.
3. Practice implementation of various concepts and tools covered in the course.
4. Utilize programming and scientific tools for relevant software implementation.
5. Understand GPU computing for building advanced computer vision pipelines on Jetson devices.

Text Books

1. *Computer Vision: Algorithms and Applications*, R. Szeliski, Springer, 2011.
2. *Computer Vision: A Modern Approach*, D. Forsyth and J. Ponce, Prentice Hall, 2nd ed., 2011.
3. Richard Szeliski, *Computer Vision: Algorithms and Applications*, Springer-Verlag London Limited 2011

Reference Books:

1. Richard Hartley and Andrew Zisserman, *Multiple View Geometry in Computer Vision*, Second Edition, Cambridge University Press, March 2004.
2. K. Fukunaga; *Introduction to Statistical Pattern Recognition*, Second Edition, Academic Press, Morgan Kaufmann, 1990.
3. R.C. Gonzalez and R.E. Woods, *Digital Image Processing*, Addison- Wesley, 1992.
4. Christopher M. Bishop; *Pattern Recognition and Machine Learning*, Springer, 2006.

UCS760: Edge AI and Robotics: Reinforcement Learning & Conversational AI

L	T	P	Cr
2	0	2	3

Course Objective: This course will provide students with introduction to the basic mathematical foundations of Reinforcement Learning for building real world computer vision applications, and Conversational AI for developing Chatbots.

Syllabus

Introduction: GPU Computing, Implementing Behaviours of Robots such as Manipulation, and Task Learning, Fundamentals of Reinforcement Learning for Vision and Deploying Conversational AI pipelines in JetsonI.

Manipulation: Overview of Manipulation in Robotics, Inverse Kinematics and Control, Gripping & Task Learning.

Reinforcement Learning: Introduction to RL: RL agents, Dynamic Programming, Monte Carlo's and Temporal-Difference Methods, OpenAI Gym, RL in Continuous Spaces. {Added Lectures, Summaries}

Conversational AI (NLP): Natural Language Processing: Introduction to NLP, BERT, Megatron, Applications of NLP: Information Retrieval, Intent Slot Filling, Machine Translation, Punctuation & Capitalization, Question and Answering Machine Machine, Relation Extraction, Sentiment Analysis, Token Classification in NeMo.

Conversational AI (Speech Processing): Automated Speech Recognition: Introduction to ASR, Architectures: Jasper/QuartzNet/CitriNet, Text to Speech: TTS-Tacotron2/WaveGlow and Jarvis Deployment

Laboratory Work:

- Manipulation Lab: Building Pick-n-place.
- Manipulation Lab: Object Assembly.
- Game Agent: Open AI Gym (Jetbot in simulation).
- Conversational AI VoiceBot: Verbal JetBot commands/feedback, ect (optional mic/speaker).

Course Learning Objectives (CLO)

After the completion of the course the student will be able to:

1. Introduce the advanced fundamental problems of reinforcement learning and conversational AI.
2. Working with various simulation environments for deployment of computer vision model.
3. Provide understanding of approaches, concepts and algorithms used in reinforcement learning and conversational AI with practical exercises.
4. Utilize programming and AI training & deployment tools for relevant model building in both edge hardware devices and simulation environments.

Text Books
